

TAHAUFYA:

FOUND IN THE NOISE

COMPLETE CHARACTER BIBLE

CURRENT CANON - COMPLETE REFERENCE

25 active dossiers • canon ledger • design language • psychology • voice • relationships • scene engine • continuity redlines • writer QA

*Prepared from the current TAHAUFYA: Found in the Noise continuity
September 2026*

How to Read This Character Bible

LOCKED CANON

Facts explicitly established in the current continuity. These override Bible Expansion.

BIBLE EXPANSION

Deep writer-facing characterization built to make scenes easier to write: motives, behavioral patterns, visual direction, failure modes, habits, scene tests, and arc possibilities. Expansion is not automatically immutable canon.

OPEN FIELD

A field the current continuity has not definitively fixed. The bible leaves it open rather than inventing an answer.

Current Canon Guardrails

- This bible contains only the currently active TAHAUFYA: Found in the Noise continuity. Characters and facts included here should be treated as current unless explicitly marked as an Open Field.
- The current roster contains 25 named active dossiers. Emily Nanacea is one person.
- The setting remains grounded by default: nonhuman/hybrid species are normal, but unrelated magic, supernatural powers, LitRPG systems, cosmic abilities, and sci-fi power packages are not imported automatically.
- Naki uses normal Expie eyes rather than screen/display eyes. His glasses and heterochromia remain design anchors. Expie blood is yellow.
- Naki and Blade's relationship material is reconciled chronologically: friendship first, then a deliberately casual nonsexual intimacy/FWB-style stage, then an explicit boyfriend stage later in the prank-war era.
- Fear's autism is one part of her character, never the sole explanation for her behavior and never a reason to infantilize her.
- Diamond's voice synthesizer is communication technology/tooling, not a personality, intelligence, or competence shorthand.
- Ivan's gun incident remains serious and consequential. Injury, fear, trust rupture, and legal aftermath are not reset for comedy.
- Prank-war comedy follows consent, proportionality, stop-signals, and repair. Genuine distress, injury, or a clear no ends the bit.

Roster Navigator

CORE CAST: Naki / N4-K2 • Mako • Doc / S-769769 • Scarf

MAKO HOUSEHOLD: Markov • Amy

MAKO FAMILY / CLOSE CIRCLE: Blurb

MAKO CLOSE CIRCLE: James • Isaac • Fear • Zucchi • Joel

CORE / PRANK WAR: Blade

COURT / FRIENDS: Lime • Aztec • Diamond

PRANK WAR: Sododa • Polar • Redsky • Raine • Deniy

PRANK WAR / FRIENDS: Grotti • Vesta

ANTAGONIST / INCIDENT: Ivan

COURT / OPPOSITION: Emily Nanacea

Ensemble Systems

Core emotional axis: Naki, Mako, Doc, Scarf, Blade, and the people whose choices directly destabilize them. This network carries observation, trust, domestic safety, intimacy, and consequence.

Mako household and family: Mako, Markov, Amy, Blurb, plus adjacent family ties. The key writing theme is that family closeness does not erase autonomy or require every member to fill the same role.

Mako close circle: James, Fear, Zucchi, Blurb, Joel, and Isaac. Their jobs are not interchangeable: history, directness, art, family familiarity, goofball energy, and grounded reliability should create different scene textures.

Court / trial system: Lime, Aztec, Diamond, Emily Nanacea, Ivan, and the harmed group. Tension comes from evidence, framing, responsibility, credibility, and procedure rather than making legal scenes pure exposition.

Prank-war system: Blade, Sododa, Polar, Redsky, Raine, Deniy, Grotti, Vesta, Naki, and whoever joins. Comedy works because each character has a different theory of what makes a prank good, and because repair is part of the social game.

01 Naki / N4-K2

CORE CAST

PRONOUNS	he/him
SPECIES / TYPE	Expie - uncommon variant
AGE	same-age reference with Blade; exact number open
STORY ROLE	primary emotional anchor; observant POV energy

Writing thesis: Naki / N4-K2 should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being observant and dryly funny, wanting to belong without being flattened into a role, and needing to say what he needs before others have to infer it.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- N4-K2 is called Naki and is an uncommon Expie variant.
- He uses he/him pronouns and wears glasses.
- His eyes are normal Expie eyes, not screens/displays; he has heterochromia with one amber-orange eye and one darker red-brown eye.
- Expie blood is yellow in this continuity.
- His core characterization is quiet, emotionally deep, observant, creative, anxious, loyal, slow to trust, and capable of dry humor.
- Blade is the same age as Naki. The relationship chronology can be written as friendship -> deliberately casual, nonsexual friends-with-benefits-style affection -> later explicit boyfriend stage during the prank-war era.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Glasses, heterochromia, and contained posture should make him recognizable before dialogue. Keep the amber-orange and darker red-brown eyes readable without making them neon. His silhouette benefits from slight forward attention - the body language of someone always collecting context.

- Primary silhouette rule: body language should make the 'observant' trait readable at rest and the 'dryly funny' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: observant • dryly funny • loyal • creative • anxious • selectively expressive • stubborn • curious • quietly competitive

WANTS	belong without being flattened into a role
NEEDS	say what he needs before others have to infer it
FEARS	being misread; losing a relationship through silence
PRESSURE POINT	interpersonal ambiguity bothers him longer than obvious chaos

Internal tension	How to write it
Observant vs. Anxious	Both are true. Do not pick one permanently. Under low pressure, observant can dominate; under relational or public pressure, anxious may interrupt it, creating behavior that feels inconsistent only from the outside.
Dryly Funny vs. Selectively Expressive	Both are true. Do not pick one permanently. Under low pressure, dryly

	funny can dominate; under relational or public pressure, selectively expressive may interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Stubborn	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, stubborn may interrupt it, creating behavior that feels inconsistent only from the outside.
Creative vs. Curious	Both are true. Do not pick one permanently. Under low pressure, creative can dominate; under relational or public pressure, curious may interrupt it, creating behavior that feels inconsistent only from the outside.
Anxious vs. Quietly Competitive	Both are true. Do not pick one permanently. Under low pressure, anxious can dominate; under relational or public pressure, quietly competitive may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their observant side becomes less guarded; they spend less effort managing how they are read and allow creative behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The dryly funny trait shapes what they notice; anxious shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The creative side becomes more exacting, while stubborn determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing anxious / curious contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through curious; their mistake risk is letting dryly funny justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their quietly competitive trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their dryly funny trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

1. NOTICE - Naki / N4-K2 first filters a situation through observant: what detail feels immediately important?
2. CLASSIFY - the dryly funny side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
3. PROTECT - before choosing an action, they protect a self-image connected to being loyal. This is where a flaw can hide inside a virtue.
4. CHOOSE - they select the move most likely to help them belong without being flattened into a role. Under pressure, this short-term goal can conflict with what they actually need: say what he needs before others have to infer it.
5. REVISE - if another person reacts unexpectedly, the creative trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Naki / N4-K2 from a line with the name tag removed?
- Does the line reflect at least one of: observant, dryly funny, loyal - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

Naki-Blade relationship

Quietly intense, observant, and difficult to reduce to a single mood; Naki works best as the character who notices the tiny fractures in a room before everyone else admits they are there.

- N4-K2 is called Naki and is an uncommon Expie variant.
- Naki uses he/him pronouns.
- Naki wears glasses.
- His current design uses normal Expie eyes rather than screen/display eyes, and he has heterochromia.
- Blade is the same age as Naki; they begin as friends and become boyfriends during the prank-war arc.

Visual & Physical Direction

- Keep his glasses as a permanent silhouette cue rather than a disposable accessory.
- The heterochromia should read clearly at conversational distance when art permits, but it should not become his only visual feature.
- His Expie anatomy should look normal for the setting except for the established uncommon-variant qualities; avoid turning him into a glowing holographic or screen-faced design.
- Favor an alert, slightly contained posture: shoulders controlled, movements economical, eyes doing more work than his hands.
- Clothing can stay dark or neutral when a scene needs him to visually absorb the environment, with small personal details carrying identity instead of loud costume changes.
- When he is emotionally comfortable, his silhouette should loosen: more leaning, more visible hand movement, less rigid spatial awareness.

Personality Architecture

observant, dryly funny, selectively expressive, loyal, stubborn, curious, socially cautious, emotionally perceptive, capable of impulsive commitment once trust is earned, more competitive than he initially appears.

WANTS	To belong without having to flatten himself into whatever other people expect an Expie, a friend, or a boyfriend to be.
NEEDS	To learn that being understood requires deliberate disclosure, not only hoping attentive people will infer everything correctly.
FEARS	Being misread, being treated as a role instead of a person, and losing control of an important relationship through silence.
PRESSURE POINT	He can tolerate chaos better than interpersonal ambiguity; uncertainty about what someone means can bother him longer than an obvious external problem.

Voice & Dialogue Guide

- Usually concise and concrete.
- Dry humor arrives with very little warning.
- He asks precise follow-up questions when something does not add up.
- Around Blade, his speech can become warmer, quicker, and more teasing without losing the underlying restraint.
- When upset, he may become unusually literal rather than dramatically emotional.
- Do not write him as emotionless; his restraint should imply processing, not absence.

Competencies

Reading room dynamics • Pattern recognition • Remembering small interpersonal details • Staying functional during confusion • One-on-one problem solving • Deadpan timing

Weaknesses, Friction & Failure Modes

- Can withhold too much context
- May assume others notice what he notices
- Can become stubborn once he has internally decided what is fair
- Dislikes performative vulnerability and may dodge it
- Competitive streak can sharpen during prank escalation
- May overfocus on a single inconsistency

Relationship Dynamics

- Mako: A major recurring connection whose social gravity can pull Naki into larger group situations; their scenes benefit from contrast between Mako's controlled analysis and Naki's personal-scale observation.
- Blade: Starts as a friend and becomes Naki's boyfriend during the prank-war arc. Their romance works best when built from accumulated trust, mutual recognition, private jokes, and moments where a prank stops being the point because the person matters more.
- Doc: A stabilizing relationship in scenes where Naki needs information, grounding, or a person who will not turn a serious situation into theater.
- Scarf: Useful as a social counterweight: Scarf can pull a reaction out of Naki without demanding a grand emotional monologue.
- Ivan: A source of danger and broken trust after the gun incident; Naki should not reset to casual normality around Ivan afterward.
- Emily: Primarily encountered through conflict around Ivan's legal defense; Naki is likely to notice the gap between her professional framing and the group's lived harm.

Arc Trajectory

- 1. Establish Naki as a quiet participant who is still making active choices, not merely watching louder characters.
- 2. Use the prank war to make his competitive side visible and to create repeated low-stakes reasons for Blade and Naki to seek each other out.
- 3. Let friendship with Blade become emotionally specific before either character names it romantic.
- 4. After the Ivan incident, show a more guarded version of Naki without erasing his humor.
- 5. Long-term growth: he becomes better at saying what he needs before resentment or uncertainty does the talking for him.

Scene-Writing Guide

- Give him something concrete to notice early in a scene; that observation can later become emotionally or practically relevant.
- His jokes land best when everyone else is being too dramatic.
- Use physical proximity with Blade as a gradual relationship meter: shared space, leaning, casual contact, instinctively checking where the other is.
- In group dialogue, he does not need the most lines; one exact line can redirect the entire conversation.

- When he is frightened, show narrowed priorities and precise actions rather than generic panic.
- Avoid writing every Expie trait as alien or exotic; he lives in a world where hybrids and nonhuman people are normal.

Continuity Redlines

- No screen/display eyes in current canon.
- Do not give him supernatural powers or LitRPG mechanics in this continuity.
- Do not make the Blade romance instantaneous; its value comes from the friend-to-boyfriend progression.

Story Hooks & Chapter Seeds

- A prank meant for Blade accidentally reveals how closely Naki has learned his habits.
- Naki is the first person to notice a contradiction in Emily's framing of an event.
- A quiet late-night scene lets Naki and Mako talk without the full group performing around them.
- Naki has to explain, plainly, why the Ivan incident changed a boundary that used to be flexible.
- Blade recognizes one of Naki's tells before Naki realizes he has a tell.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
competence without showboating	consequences being treated as temporary
low-stakes competition	being cornered into instant disclosure
being given useful context	unearned authority
private creative time	fake apologies
clever solutions	needless ambiguity
winning fairly	having motives assigned to them
quiet food/drink routines	public humiliation
specific compliments	carelessness with private information

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of being misread; losing a relationship through silence can make normal observant behavior harden into a defense.
- Common mistake: using loyal as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Blade: friend/FWB-to-boyfriend progression.

Mako: major recurring connection.

Doc: stabilizer.

Ivan: broken trust.

Emily: opposing legal pressure.

- Who gets the fastest honest answer from this character?

- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Naki / N4-K2, keep the central pressure tied to wanting to belong without being flattened into a role while actually needing to say what he needs before others have to infer it.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Naki / N4-K2, keep the central pressure tied to wanting to belong without being flattened into a role while actually needing to say what he needs before others have to infer it.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Naki / N4-K2, keep the central pressure tied to wanting to belong without being flattened into a role while actually needing to say what he needs before others have to infer it.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Naki / N4-K2, keep the central pressure tied to wanting to belong without being flattened into a role while actually needing to say what he needs before others have to infer it.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Naki / N4-K2, keep the central pressure tied to wanting to belong without being flattened into a role while actually needing to say what he needs before others have to infer it.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Naki / N4-K2, keep the central pressure tied to wanting to belong without being flattened into a role while actually needing to say what he needs before others have to infer it.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Naki / N4-K2, keep the central pressure tied to wanting to belong without being flattened into a role while actually needing to say what he needs before others have to infer it.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from dryly funny, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let dryly funny color the interpretation and creative color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the selectively expressive part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their creative trait governs the recalculation; their curious trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from anxious: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let selectively expressive color the interpretation and loyal color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is stubborn. The scene becomes interesting when the anxious part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their curious trait governs the recalculation; their stubborn trait governs what other people actually get to see.

- 09. When a private detail becomes public:** The first visible tell should come from quietly competitive: a pause, look, posture shift, or too-precise question. The second beat comes from quietly competitive, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and dryly funny color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is dryly funny. The scene becomes interesting when the creative part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their loyal trait governs the recalculation; their selectively expressive trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from curious, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let anxious color the interpretation and observant color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is selectively expressive. The scene becomes interesting when the loyal part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their stubborn trait governs the recalculation; their anxious trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from curious: a pause, look, posture shift, or too-precise question. The second beat comes from stubborn, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let quietly competitive color the interpretation and quietly competitive color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the dryly funny part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their dryly funny trait governs the recalculation; their creative trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from selectively expressive, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let creative color the interpretation and curious color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is anxious. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their selectively expressive trait governs the recalculation; their loyal trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from stubborn: a pause, look, posture shift, or too-precise question. The second beat comes from anxious, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let curious color the interpretation and stubborn color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is quietly competitive. The scene becomes interesting when the quietly competitive part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their dryly funny trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from dryly funny: a pause, look, posture shift, or too-precise question. The second beat comes from creative, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let loyal color the interpretation and selectively expressive color the response.

M. Scene Seed Bank

- Give Naki / N4-K2 a scene where being observant solves the practical problem but damages a relationship.
- Put Naki / N4-K2 with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Naki / N4-K2 did not know they had.
- Write a low-stakes competition where Naki / N4-K2's dryly funny side becomes unexpectedly intense.
- Give Naki / N4-K2 information that would help them win an argument but hurt someone if revealed.
- Force Naki / N4-K2 to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Naki / N4-K2 does in the three seconds after realizing it failed.
- Have another character misunderstand Naki / N4-K2's loyal behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Naki / N4-K2 without using dialogue about safety.
- Make them defend a person they are currently angry with.

- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Naki / N4-K2 asks why or pretends not to care.
- Write a scene where Naki / N4-K2 has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Naki / N4-K2 to the single adjective 'observant'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.
- No screen/display eyes in current canon.
- Do not change Expie blood from yellow without a deliberate continuity change.

O. 50-Point Quick Reference

01. Primary trait: observant
02. Secondary trait: dryly funny
03. Contradictory trait: loyal
04. Social pressure trait: creative
05. Hidden-useful trait: anxious
06. Wants to belong without being flattened into a role
07. Needs to say what he needs before others have to infer it
08. Core fear cluster: being misread; losing a relationship through silence
09. Pressure point: interpersonal ambiguity bothers him longer than obvious chaos
10. Role: primary emotional anchor; observant POV energy
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: competence without showboating
22. Likely comfort: low-stakes competition
23. Likely comfort: being given useful context
24. Likely comfort: private creative time
25. Likely comfort: clever solutions
26. Likely friction: consequences being treated as temporary
27. Likely friction: being cornered into instant disclosure
28. Likely friction: unearned authority
29. Likely friction: fake apologies
30. Likely friction: needless ambiguity
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.

37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

02 Mako

CORE CAST / HOUSEHOLD

PRONOUNS	he/him
SPECIES / TYPE	black-furred horned hybrid; exact species open
AGE	exact age open
STORY ROLE	social gravity; controlled analyst; household anchor

Writing thesis: Mako should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being observant and restrained, wanting to keep people safe while preserving a functional home and friend network, and needing to trust others with autonomy instead of solving everything himself.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Mako is male.
- He is a tall black-furred hybrid with multiple horns, a large irregular ruff, and clawed feet.
- He is observant, restrained, analytical, socially selective, and artistically attentive.
- Markov is his adoptive younger brother.
- Amy is his biological little sister.
- Blurb is his cousin.
- James, Fear, Zucchi, Joel, and Isaac belong to his close social circle.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

The black fur, horn architecture, oversized irregular ruff, and clawed feet are his strongest silhouette anchors. He should feel physically substantial without defaulting to menace: a large figure whose control is visible in how little motion he wastes.

- Primary silhouette rule: body language should make the 'observant' trait readable at rest and the 'restrained' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: observant • restrained • analytical • artistically attentive • protective • selective • patient • private • dryly amused • decisive

WANTS	keep people safe while preserving a functional home and friend network
NEEDS	trust others with autonomy instead of solving everything himself
FEARS	failing people who rely on him; losing control of a crisis
PRESSURE POINT	responsibility stacks until restraint hardens into command

Internal tension	How to write it
Observant vs. Protective	Both are true. Do not pick one permanently. Under low pressure, observant can dominate; under relational or public pressure, protective may interrupt it, creating behavior that feels inconsistent only from the outside.
Restrained vs. Selective	Both are true. Do not pick one permanently. Under low pressure,

	restrained can dominate; under relational or public pressure, selective may interrupt it, creating behavior that feels inconsistent only from the outside.
Analytical vs. Patient	Both are true. Do not pick one permanently. Under low pressure, analytical can dominate; under relational or public pressure, patient may interrupt it, creating behavior that feels inconsistent only from the outside.
Artistically Attentive vs. Private	Both are true. Do not pick one permanently. Under low pressure, artistically attentive can dominate; under relational or public pressure, private may interrupt it, creating behavior that feels inconsistent only from the outside.
Protective vs. Dryly Amused	Both are true. Do not pick one permanently. Under low pressure, protective can dominate; under relational or public pressure, dryly amused may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their observant side becomes less guarded; they spend less effort managing how they are read and allow artistically attentive behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The restrained trait shapes what they notice; protective shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The artistically attentive side becomes more exacting, while patient determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing protective / private contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through private; their mistake risk is letting observant justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their dryly amused trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their observant trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

1. NOTICE - Mako first filters a situation through observant: what detail feels immediately important?
2. CLASSIFY - the restrained side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
3. PROTECT - before choosing an action, they protect a self-image connected to being analytical. This is where a flaw can hide inside a virtue.
4. CHOOSE - they select the move most likely to help them keep people safe while preserving a functional home and friend network. Under pressure, this short-term goal can conflict with what they actually need: trust others with autonomy instead of solving everything himself.
5. REVISE - if another person reacts unexpectedly, the artistically attentive trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Mako from a line with the name tag removed?
- Does the line reflect at least one of: observant, restrained, analytical - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

Lime, and Aztec

between multiple character clusters

Mako carries the kind of presence that can make a crowded room organize itself around him without him ever needing to demand attention.

- Mako is male.
- He is a tall black-furred hybrid with multiple horns, a large irregular ruff, and clawed feet.
- He is observant, restrained, analytical, socially selective, and artistically attentive.
- Markov is Mako's adoptive younger brother.
- Amy is Mako's biological little sister.
- Mako, Markov, and Amy live together.
- James, Fear, Zucchi, Blurb, and Joel are recurring close people in Mako's circle; Blurb is his cousin and Joel is his original/oldest close friend.

Visual & Physical Direction

- Preserve the dark fur, horn structure, ruff, and clawed feet as the primary silhouette language.
- His size should communicate presence without requiring aggressive posture.
- The irregular ruff can make otherwise formal or controlled outfits feel slightly untamed.
- When he is thinking, stillness is more characteristic than pacing.
- His home-space scenes should visually contrast his imposing body with habitual domestic familiarity around Markov and Amy.
- Art-related scenes can show softened posture and more sustained visual attention than ordinary social scenes.

Personality Architecture

restrained, analytical, protective, socially selective, artistically attentive, dry, patient until a line is crossed, responsible, capable of quiet tenderness, difficult to pressure with group excitement.

WANTS

A life where the people he cares about are safe enough that

every gathering does not require him to become the responsible center.

NEEDS

To accept that competence does not obligate him to carry

every problem personally.

FEARS

Failing someone he was in a position to protect, especially

family.

PRESSURE POINT

Threats to his household collapse his usual emotional

distance very quickly.

Voice & Dialogue Guide

- Measured, low-drama wording.
- Rarely wastes words on reactions everyone can already see.
- Can become unexpectedly gentle with Amy and Markov.
- Uses questions to make people expose weak logic rather than immediately arguing.
- Humor is understated and often arrives as a correction or observation.
- When truly angry, he gets more controlled, not louder.

Competencies

Situational analysis • De-escalation • Planning • Household responsibility • Visual/artistic judgment • Reading social risk

Weaknesses, Friction & Failure Modes

- Can become over-responsible
- May seem distant when he is actually assessing
- Can withhold concern until it turns into a hard boundary
- Does not always delegate
- Protectiveness may become controlling under stress
- Has little patience for people who make danger into spectacle

Relationship Dynamics

- Markov: Adoptive younger brother. Mako's protection should feel familial and habitual, not charitable; adoption is not treated as lesser family status.
- Amy: Biological little sister. Their relationship can show Mako at his most domestic, teasing, and transparently protective.
- James: One of Mako's closest friends; useful for history, shorthand, and scenes where Mako does not need to explain every part of himself.
- Fear: Close friend; her minor autism is simply part of who she is and never a reason for the group to infantilize her.
- Zucchi: Close friend whose love of drawing creates an obvious art-adjacent bond with Mako.
- Blurb: Cousin and recurring close person; family familiarity allows a different kind of teasing than ordinary friendship.
- Joel: The OG/oldest close friend; a goofball who can get reactions out of Mako that newer friends cannot.
- Isaac: Recurring friend/contact whose wolf-like nonhuman design adds another visually distinctive presence to Mako's circle.
- Naki: A major cross-cluster connection; both are observant, but Mako tends to assess systems while Naki catches small interpersonal inconsistencies.

Arc Trajectory

- 1. Show the difference between Mako choosing leadership and other people automatically handing leadership to him.
- 2. Let family scenes establish what he is protecting before major danger arrives.
- 3. The Ivan incident should test his belief that careful social judgment can keep people safe.
- 4. Court-arc scenes can force him into situations where restraint is strategically useful but emotionally frustrating.
- 5. Long-term growth: delegate, ask for help earlier, and let trusted people protect him back.

Scene-Writing Guide

- Pair him with chaotic characters when you want controlled comedy.
- Let his attention to art or design reveal emotional softness without a speech.
- In danger scenes, have him identify exits, people, and priorities before he comments on his own fear.
- With Joel, allow more visibly exasperated reactions.
- With Markov/Amy, use mundane household details to humanize him.
- Avoid making his calmness omniscience; he should still misjudge people and pay for it.

Continuity Redlines

- Markov is adoptive family and must never be treated as less real than Amy.
- Do not convert Mako into a supernatural powerhouse; this setting is grounded.
- Do not make every scene about his physical intimidation; his restraint is more important.

Story Hooks & Chapter Seeds

- Mako finds one of Zucchi's sketches of the group and notices who has been drawn closest together.
- Joel weaponizes a decades-old or long-running inside joke at the worst possible formal moment.
- Mako and Markov disagree over what protection should look like.
- Amy catches Mako quietly preparing for danger and calls out how obvious he is being.
- During court prep, Mako notices that a supposedly small wording choice could change how the Ivan incident is

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
low-stakes competition	being reduced to one trait
winning fairly	public humiliation
objects with personal history	having motives assigned to them
inside jokes that survive context changes	people treating boundaries as challenges
unforced physical comfort	unearned authority
people who say what they mean	carelessness with private information
being given useful context	fake apologies
quiet food/drink routines	social tests nobody agreed to

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of failing people who rely on him; losing control of a crisis can make normal observant behavior harden into a defense.
- Common mistake: using analytical as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Markov: adoptive younger brother.

Amy: biological little sister.

Blurb: cousin.

James/Fear/Zucchi/Joel/Isaac: close circle.

Naki: major recurring connection.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?

- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Mako, keep the central pressure tied to wanting to keep people safe while preserving a functional home and friend network while actually needing to trust others with autonomy instead of solving everything himself.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Mako, keep the central pressure tied to wanting to keep people safe while preserving a functional home and friend network while actually needing to trust others with autonomy instead of solving everything himself.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Mako, keep the central pressure tied to wanting to keep people safe while preserving a functional home and friend network while actually needing to trust others with autonomy instead of solving everything himself.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Mako, keep the central pressure tied to wanting to keep people safe while preserving a functional home and friend network while actually needing to trust others with autonomy instead of solving everything himself.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Mako, keep the central pressure tied to wanting to keep people safe while preserving a functional home and friend network while actually needing to trust others with autonomy instead of solving everything himself.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Mako, keep the central pressure tied to wanting to keep people safe while preserving a functional home and friend network while actually needing to trust others with autonomy instead of solving everything himself.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Mako, keep the central pressure tied to wanting to keep people safe while preserving a functional home and friend network while actually needing to trust others with autonomy instead of solving everything himself.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

01. When someone enters the room unexpectedly: The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from restrained, which determines whether they approach, deflect, challenge, or wait.

02. When a joke lands much harder than intended: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let restrained color the interpretation and artistically attentive color the response.

03. When a friend stops replying: Their instinct is to protect their self-image as someone who is analytical. The scene becomes interesting when the selective part of them pushes in the opposite direction.

04. When they are accused of something unfairly: Use a two-step reaction: internal recalculation, then social choice. Their artistically attentive trait governs the recalculation; their private trait governs what other people actually get to see.

05. When someone gives them sincere praise: The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from decisive, which determines whether they approach, deflect, challenge, or wait.

06. When the group starts arguing over a trivial detail: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let selective color the interpretation and restrained color the response.

07. When a plan fails in public: Their instinct is to protect their self-image as someone who is patient. The scene becomes interesting when the artistically attentive part of them pushes in the opposite direction.

08. When they see someone they care about injured: Use a two-step reaction: internal recalculation, then social choice. Their private trait governs the recalculation; their selective trait governs what other people actually get to see.

- 09. When a private detail becomes public:** The first visible tell should come from dryly amused: a pause, look, posture shift, or too-precise question. The second beat comes from private, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let decisive color the interpretation and decisive color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the restrained part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their restrained trait governs the recalculation; their artistically attentive trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from analytical: a pause, look, posture shift, or too-precise question. The second beat comes from selective, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let artistically attentive color the interpretation and private color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is protective. The scene becomes interesting when the decisive part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their selective trait governs the recalculation; their restrained trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from patient: a pause, look, posture shift, or too-precise question. The second beat comes from artistically attentive, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let private color the interpretation and selective color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is dryly amused. The scene becomes interesting when the private part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their decisive trait governs the recalculation; their decisive trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from restrained, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let restrained color the interpretation and artistically attentive color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is analytical. The scene becomes interesting when the selective part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their artistically attentive trait governs the recalculation; their private trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from decisive, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let selective color the interpretation and restrained color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is patient. The scene becomes interesting when the artistically attentive part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their private trait governs the recalculation; their selective trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from dryly amused: a pause, look, posture shift, or too-precise question. The second beat comes from private, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let decisive color the interpretation and decisive color the response.

M. Scene Seed Bank

- Give Mako a scene where being observant solves the practical problem but damages a relationship.
- Put Mako with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Mako did not know they had.
- Write a low-stakes competition where Mako's restrained side becomes unexpectedly intense.
- Give Mako information that would help them win an argument but hurt someone if revealed.
- Force Mako to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Mako does in the three seconds after realizing it failed.
- Have another character misunderstand Mako's analytical behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Mako without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.

- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Mako asks why or pretends not to care.
- Write a scene where Mako has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Mako to the single adjective 'observant'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: observant
02. Secondary trait: restrained
03. Contradictory trait: analytical
04. Social pressure trait: artistically attentive
05. Hidden-useful trait: protective
06. Wants to keep people safe while preserving a functional home and friend network
07. Needs to trust others with autonomy instead of solving everything himself
08. Core fear cluster: failing people who rely on him; losing control of a crisis
09. Pressure point: responsibility stacks until restraint hardens into command
10. Role: social gravity; controlled analyst; household anchor
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: low-stakes competition
22. Likely comfort: winning fairly
23. Likely comfort: objects with personal history
24. Likely comfort: inside jokes that survive context changes
25. Likely comfort: unforced physical comfort
26. Likely friction: being reduced to one trait
27. Likely friction: public humiliation
28. Likely friction: having motives assigned to them
29. Likely friction: people treating boundaries as challenges
30. Likely friction: unearned authority
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.

40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

03 James

MAKO CLOSE CIRCLE

PRONOUNS	he/him
SPECIES / TYPE	open
AGE	same age as Mako
STORY ROLE	one of Mako's closest friends; shorthand familiarity

Writing thesis: James should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being reliable and familiar, wanting to keep old friendship easy without taking it for granted, and needing to say when something has changed instead of relying only on history.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- James is male and the same age as Mako.
- He is one of Mako's closest friends.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between reliable and familiar. The silhouette should communicate how James occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'reliable' trait readable at rest and the 'familiar' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: reliable • familiar • witty • loyal • practical • observant • steady • casual • protective • adaptable

WANTS	keep old friendship easy without taking it for granted
NEEDS	say when something has changed instead of relying only on history
FEARS	quiet drift between people who assume they are fine
PRESSURE POINT	old familiarity can make him underestimate new stakes

Internal tension	How to write it
Reliable vs. Practical	Both are true. Do not pick one permanently. Under low pressure, reliable can dominate; under relational or public pressure, practical may interrupt it, creating behavior that feels inconsistent only from the outside.
Familiar vs. Observant	Both are true. Do not pick one permanently. Under low pressure, familiar can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.
Witty vs. Steady	Both are true. Do not pick one permanently. Under low pressure, witty can dominate; under relational or public pressure, steady may interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Casual	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, casual may interrupt

	it, creating behavior that feels inconsistent only from the outside.
Practical vs. Protective	Both are true. Do not pick one permanently. Under low pressure, practical can dominate; under relational or public pressure, protective may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their reliable side becomes less guarded; they spend less effort managing how they are read and allow loyal behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The familiar trait shapes what they notice; practical shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The loyal side becomes more exacting, while steady determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing practical / casual contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through casual; their mistake risk is letting reliable justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their protective trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their reliable trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

13. 1. NOTICE - James first filters a situation through reliable: what detail feels immediately important?
14. 2. CLASSIFY - the familiar side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
15. 3. PROTECT - before choosing an action, they protect a self-image connected to being witty. This is where a flaw can hide inside a virtue.
16. 4. CHOOSE - they select the move most likely to help them keep old friendship easy without taking it for granted. Under pressure, this short-term goal can conflict with what they actually need: say when something has changed instead of relying only on history.
17. 5. REVISE - if another person reacts unexpectedly, the loyal trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
18. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify James from a line with the name tag removed?
- Does the line reflect at least one of: reliable, familiar, witty - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

MAKO CIRCLE

James should carry the comfortable shorthand of someone who has been close enough to Mako for the friendship to survive silence, annoyance, and unfinished sentences.

- James is male.
- He is the same age as Mako.
- He is one of Mako's closest friends.

Visual & Physical Direction

- Specific design remains open; prioritize a silhouette that does not overlap Mako, Joel, or Blurb.
- A consistent everyday accessory can support the “close friend who is always around” feeling.
- Expression should be readable enough to play reaction beats against Mako's restraint.

Personality Architecture

familiar, steady, wry, loyal, comfortable with silence, good at calling Mako on patterns, not easily dazzled by status or presentation, emotionally practical.

WANTS To remain a friend Mako can be ordinary around.

NEEDS To avoid assuming long history makes direct

communication unnecessary.

FEARS Watching Mako isolate under the excuse of responsibility.

PRESSURE POINT When Mako says “I’ve got it” while clearly carrying too much.

Voice & Dialogue Guide

- Casual and unceremonious with Mako.
- Can finish a thought Mako refuses to say.
- Uses understated teasing.
- Does not need to over-explain shared history.
- More direct in private than in front of the full group.
- Can cut through tension with familiarity rather than comedy.

Competencies

Friendship maintenance • Reading Mako • Private confrontation • Remembering history • Practical support • Knowing when silence is companionable

Weaknesses, Friction & Failure Modes

- May rely too heavily on “I know him”
- Can become dismissive of newer people's read on Mako
- May delay hard conversations
- Protective of long-standing group norms
- Can tease at the wrong time
- Sometimes assumes stability will repair itself

Relationship Dynamics

- Mako: Closest-friend dynamic built on shorthand and history.
- Joel: Both have history-adjacent roles but different energy; Joel is the OG goofball, James can be the steadier confidant.
- Fear/Zucchi/Blurb: Part of the same close circle; individual bonds should vary rather than becoming one friendship blob.
- Naki: Can help Naki understand Mako without speaking for Mako.

Arc Trajectory

1. Establish history through behavior, not exposition.
2. Make James confront Mako when others are too polite.
3. Let him be wrong about what Mako needs once.
4. After Ivan, test whether familiar routines still work.
5. Long-term: update an old friendship rather than assuming it remains healthy automatically.

Scene-Writing Guide

- Use incomplete sentences that Mako understands.
- Let James know where things are in Mako's home.
- Avoid making him “generic best friend.”
- Give him an opinion that diverges from Joel and Zucchi.
- His strongest scenes can be quiet two-person conversations.
- Show affection through mundane familiarity.

Continuity Redlines

- Same age as Mako.
- One of Mako's closest friends.
- Do not confuse him with the separate Broken Lives Jamesz.

Story Hooks & Chapter Seeds

- James notices Mako has started locking a door he never used to lock.
- He calls out Mako for giving everyone else a plan and himself no recovery time.
- A prank resurrects an old inside joke James thought had died years ago.
- James and Naki compare notes and realize they notice completely different things about Mako.
- At court prep, James discovers familiarity does not make testimony easy.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
low-stakes competition	unearned authority
unforced physical comfort	performative concern
clever solutions	consequences being treated as temporary
inside jokes that survive context changes	public humiliation
repair after conflict	competence being mistaken for invulnerability
objects with personal history	having motives assigned to them
specific compliments	social tests nobody agreed to
private creative time	being reduced to one trait

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of quiet drift between people who assume they are fine can make normal reliable behavior harden into a defense.
- Common mistake: using witty as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Mako: one of closest friends.

Fear/Zucchi/Blurb/Joel/Isaac: shared circle.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For James, keep the central pressure tied to wanting to keep old friendship easy without taking it for granted while actually needing to say when something has changed instead of relying only on history.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For James, keep the central pressure tied to wanting to keep old friendship easy without taking it for granted while actually needing to say when something has changed instead of relying only on history.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For James, keep the central pressure tied to wanting to keep old friendship easy without taking it for granted while actually needing to say when something has changed instead of relying only on history.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For James, keep the central pressure tied to wanting to keep old friendship easy without taking it for granted while actually needing to say when something has changed instead of relying only on history.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For James, keep the central pressure tied to wanting to keep old friendship easy without taking it for granted while actually needing to say when something has changed instead of relying only on history.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For James, keep the central pressure tied to wanting to keep old friendship easy without taking it for granted while actually needing to say when something has changed instead of relying only on history.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it

	faster, or chooses it more deliberately. For James, keep the central pressure tied to wanting to keep old friendship easy without taking it for granted while actually needing to say when something has changed instead of relying only on history.
--	--

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from reliable: a pause, look, posture shift, or too-precise question. The second beat comes from familiar, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let familiar color the interpretation and loyal color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is witty. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their loyal trait governs the recalculation; their casual trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from practical: a pause, look, posture shift, or too-precise question. The second beat comes from adaptable, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and familiar color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is steady. The scene becomes interesting when the loyal part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their casual trait governs the recalculation; their observant trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from casual, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptable color the interpretation and adaptable color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is reliable. The scene becomes interesting when the familiar part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their familiar trait governs the recalculation; their loyal trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from witty: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let loyal color the interpretation and casual color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is practical. The scene becomes interesting when the adaptable part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their familiar trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from steady: a pause, look, posture shift, or too-precise question. The second beat comes from loyal, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let casual color the interpretation and observant color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is protective. The scene becomes interesting when the casual part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their adaptable trait governs the recalculation; their adaptable trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from reliable: a pause, look, posture shift, or too-precise question. The second beat comes from familiar, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let familiar color the interpretation and loyal color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is witty. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their loyal trait governs the recalculation; their casual trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from practical: a pause, look, posture shift, or too-precise question. The second beat comes from adaptable, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and familiar color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is steady. The scene becomes interesting when the loyal part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their casual trait governs the recalculation; their observant trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from casual, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptable color the interpretation and adaptable color the response.

M. Scene Seed Bank

- Give James a scene where being reliable solves the practical problem but damages a relationship.
- Put James with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell James did not know they had.
- Write a low-stakes competition where James's familiar side becomes unexpectedly intense.
- Give James information that would help them win an argument but hurt someone if revealed.
- Force James to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what James does in the three seconds after realizing it failed.
- Have another character misunderstand James's witty behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for James without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether James asks why or pretends not to care.
- Write a scene where James has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce James to the single adjective 'reliable'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: reliable
02. Secondary trait: familiar
03. Contradictory trait: witty
04. Social pressure trait: loyal
05. Hidden-useful trait: practical
06. Wants to keep old friendship easy without taking it for granted
07. Needs to say when something has changed instead of relying only on history
08. Core fear cluster: quiet drift between people who assume they are fine
09. Pressure point: old familiarity can make him underestimate new stakes
10. Role: one of Mako's closest friends; shorthand familiarity
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.

19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: low-stakes competition
22. Likely comfort: unforced physical comfort
23. Likely comfort: clever solutions
24. Likely comfort: inside jokes that survive context changes
25. Likely comfort: repair after conflict
26. Likely friction: unearned authority
27. Likely friction: performative concern
28. Likely friction: consequences being treated as temporary
29. Likely friction: public humiliation
30. Likely friction: competence being mistaken for invulnerability
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

04 Doc / S-769769

CORE CAST

PRONOUNS	open
SPECIES / TYPE	open
AGE	open
STORY ROLE	stabilizer; information and care-oriented presence

Writing thesis: Doc / S-769769 should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being methodical and calm, wanting to keep people alive/informed without stripping them of choice, and needing to balance competence with emotional transparency.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Doc is also designated S-769769.
- Current pronouns/species/age are not yet locked.
- Doc functions as a stabilizing, information-oriented presence in the group.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact pronouns remain open until explicitly locked.
- Exact species/type remains open.
- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between methodical and calm. The silhouette should communicate how Doc / S-769769 occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'methodical' trait readable at rest and the 'calm' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: methodical • calm • precise • patient • pragmatic • observant • ethical • contained • reliable • dry

WANTS	keep people alive/informed without stripping them of choice
NEEDS	balance competence with emotional transparency
FEARS	preventable harm; being forced to act without enough information
PRESSURE POINT	crisis compresses their language even further

Internal tension	How to write it
Methodical vs. Pragmatic	Both are true. Do not pick one permanently. Under low pressure, methodical can dominate; under relational or public pressure, pragmatic may interrupt it, creating behavior that feels inconsistent only from the outside.
Calm vs. Observant	Both are true. Do not pick one permanently. Under low pressure, calm can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.
Precise vs. Ethical	Both are true. Do not pick one permanently. Under low pressure, precise

	can dominate; under relational or public pressure, ethical may interrupt it, creating behavior that feels inconsistent only from the outside.
Patient vs. Contained	Both are true. Do not pick one permanently. Under low pressure, patient can dominate; under relational or public pressure, contained may interrupt it, creating behavior that feels inconsistent only from the outside.
Pragmatic vs. Reliable	Both are true. Do not pick one permanently. Under low pressure, pragmatic can dominate; under relational or public pressure, reliable may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their methodical side becomes less guarded; they spend less effort managing how they are read and allow patient behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The calm trait shapes what they notice; pragmatic shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The patient side becomes more exacting, while ethical determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing pragmatic / contained contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through contained; their mistake risk is letting methodical justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their reliable trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their methodical trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

19. 1. NOTICE - Doc / S-769769 first filters a situation through methodical: what detail feels immediately important?
20. 2. CLASSIFY - the calm side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
21. 3. PROTECT - before choosing an action, they protect a self-image connected to being precise. This is where a flaw can hide inside a virtue.
22. 4. CHOOSE - they select the move most likely to help them keep people alive/informed without stripping them of choice. Under pressure, this short-term goal can conflict with what they actually need: balance competence with emotional transparency.
23. 5. REVISE - if another person reacts unexpectedly, the patient trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
24. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Doc / S-769769 from a line with the name tag removed?
- Does the line reflect at least one of: methodical, calm, precise - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

support character

Doc works best as the person who turns shock into the next actionable step without pretending that action makes the emotional damage disappear.

- Doc is also known by the designation S-769769.
- Doc remains part of the continuing cast after the Found in the Noise reset.
- No supernatural or science-fiction capabilities are required by current canon.

Visual & Physical Direction

- Keep the design readable and functional rather than overloaded with “doctor” iconography unless later canon specifies a profession.
- A consistent accessory, bag, coat, scarf, badge, or tool can become the visual shorthand for preparedness without implying futuristic tech.
- Body language should be purposeful: checking, organizing, moving people to safer positions.
- Expression design should favor focused concern over melodramatic panic.
- If a designation is visibly displayed, treat it as an identity detail, not proof of a secret lab backstory.

Personality Architecture

practical, steady, observant, compassionate without being saccharine, boundary-aware, skeptical of chaos, efficient, quietly stubborn.

WANTS To keep situations from becoming worse when everyone else is emotionally overloaded.

NEEDS To remember that people sometimes need presence before solutions.

FEARS Missing the one detail that mattered because everyone was moving too fast.

PRESSURE POINT Repeated preventable recklessness.

Voice & Dialogue Guide

- Clear instructions under pressure.
- Uses names frequently when trying to focus someone.
- Avoids jargon unless it helps.
- Can become dryly sarcastic after the immediate danger passes.
- Does not narrate feelings for other people.
- Silence is comfortable when there is nothing useful to add.

Competencies

Crisis organization • Basic first-response reasoning • Information triage • Keeping track of who needs what • Practical planning • Boundary setting

Weaknesses, Friction & Failure Modes

- Can sound clinical when trying to be efficient
- May over-prioritize immediate tasks
- Frustrated by repeated recklessness
- Can take on too much responsibility
- May understate personal stress
- Does not always know when advice is unwanted

Relationship Dynamics

- Naki: A grounding connection; Doc can give Naki concrete information when ambiguity is making him spiral inward.
- Mako: Mutual respect built around competence, with occasional friction over who is taking too much responsibility.
- Scarf: Useful operational pairing; Scarf can handle social motion while Doc handles practical consequences.
- Ivan: After the gun incident, Doc has strong reason to treat Ivan as a safety problem before treating him as a social problem.
- Emily: Potential conflict when professional/legal framing appears to minimize practical harm.

Arc Trajectory

- 1. Establish Doc as useful without making them infallible.
- 2. Let a failed assumption challenge the “I can manage this” reflex.
- 3. After the Ivan incident, show secondary stress rather than only immediate response.
- 4. Court prep can turn Doc’s factual memory into a valuable but emotionally taxing resource.
- 5. Long-term growth: allow others to care for Doc instead of using usefulness as emotional armor.

Scene-Writing Guide

- Give Doc physical tasks during exposition so information never feels like a lecture.
- Use short, calm sentences when everyone else is shouting.
- A rare loss of composure should matter because it breaks a strong baseline.
- Let Doc say “I don’t know” when the answer is not established.
- Do not equate a designation with robotic speech.
- Use post-crisis cleanup scenes to reveal personality.

Continuity Redlines

- Do not invent futuristic medical technology as a shortcut.
- Do not force a secret-experiment origin solely from S-769769.
- Do not make Doc emotionally blank.
- Keep current gender/species open unless later canon establishes them.

Story Hooks & Chapter Seeds

- Doc keeps a written timeline after the Ivan incident and notices a missing interval.
- A prank-war injury is minor but creates conflict because Doc is tired of “minor” preventable incidents.
- Doc and Diamond work unexpectedly well together organizing testimony.
- Mako tries to take over a crisis plan and Doc tells him, plainly, to stop.
- Naki notices Doc has been checking everyone else and never themselves.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
quiet food/drink routines	jokes that require a real victim
inside jokes that survive context changes	needless ambiguity
people who say what they mean	being cornered into instant disclosure

private creative time	performative concern
specific compliments	consequences being treated as temporary
unforced physical comfort	people treating boundaries as challenges
winning fairly	fake apologies
repair after conflict	unearned authority

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of preventable harm; being forced to act without enough information can make normal methodical behavior harden into a defense.
- Common mistake: using precise as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Naki: grounding connection.

Mako: trusted functional ally.

group: stabilizer.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Doc / S-769769, keep the central pressure tied to wanting to keep people alive/informed without stripping them of choice while actually needing to balance competence with emotional transparency.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Doc / S-769769, keep the central pressure tied to wanting to keep people alive/informed without stripping them of choice while actually needing to balance competence with emotional transparency.
Compensating behavior	Let them initially solve the problem the way they always do. It should

	work partially, which is why the habit survives. For Doc / S-769769, keep the central pressure tied to wanting to keep people alive/informed without stripping them of choice while actually needing to balance competence with emotional transparency.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Doc / S-769769, keep the central pressure tied to wanting to keep people alive/informed without stripping them of choice while actually needing to balance competence with emotional transparency.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Doc / S-769769, keep the central pressure tied to wanting to keep people alive/informed without stripping them of choice while actually needing to balance competence with emotional transparency.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Doc / S-769769, keep the central pressure tied to wanting to keep people alive/informed without stripping them of choice while actually needing to balance competence with emotional transparency.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Doc / S-769769, keep the central pressure tied to wanting to keep people alive/informed without stripping them of choice while actually needing to balance competence with emotional transparency.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

01. When someone enters the room unexpectedly: The first visible tell should come from methodical: a pause, look, posture shift, or too-precise question. The second beat comes from calm, which determines whether they approach, deflect, challenge, or wait.

02. When a joke lands much harder than intended: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let calm color the interpretation and patient color the response.

03. When a friend stops replying: Their instinct is to protect their self-image as someone who is precise. The scene becomes interesting when the observant part of them pushes in the opposite direction.

04. When they are accused of something unfairly: Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their contained trait governs what other people actually get to see.

05. When someone gives them sincere praise: The first visible tell should come from pragmatic: a pause, look, posture shift, or too-precise question. The second beat comes from dry, which determines whether they approach, deflect, challenge, or wait.

06. When the group starts arguing over a trivial detail: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and calm color the response.

07. When a plan fails in public: Their instinct is to protect their self-image as someone who is ethical. The scene becomes interesting when the patient part of them pushes in the opposite direction.

08. When they see someone they care about injured: Use a two-step reaction: internal recalculation, then social choice. Their contained trait governs the recalculation; their observant trait governs what other people actually get to see.

09. When a private detail becomes public: The first visible tell should come from reliable: a pause, look, posture shift, or too-precise question. The second beat comes from contained, which determines whether they approach, deflect, challenge, or wait.

10. When they realize they misunderstood the situation: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let dry color the interpretation and dry color the response.

11. When they are asked to lead: Their instinct is to protect their self-image as someone who is methodical. The scene becomes interesting when the calm part of them pushes in the opposite direction.

12. When they are told to stay out of it: Use a two-step reaction: internal recalculation, then social choice. Their calm trait governs the recalculation; their patient trait governs what other people actually get to see.

13. When someone breaks a promise: The first visible tell should come from precise: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.

14. When they receive a gift that shows unusual attention: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let patient color the interpretation and contained color the response.

15. When they are exhausted but everyone else wants to keep going: Their instinct is to protect their self-image as someone who is pragmatic. The scene becomes interesting when the dry part of them pushes in the opposite direction.

16. When a prank crosses a boundary: Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their calm trait governs what other people actually get to see.

17. When they discover evidence that changes the story: The first visible tell should come from ethical: a pause, look, posture shift, or too-precise question. The second beat comes from patient, which determines whether they approach, deflect, challenge, or wait.

18. When they have five quiet minutes with the person they trust most: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let contained color the interpretation and observant color the response.

19. When they have to ask for help: Their instinct is to protect their self-image as someone who is reliable. The scene becomes interesting when the contained part of them pushes in the opposite direction.

- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their dry trait governs the recalculation; their dry trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from methodical: a pause, look, posture shift, or too-precise question. The second beat comes from calm, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let calm color the interpretation and patient color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is precise. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their contained trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from pragmatic: a pause, look, posture shift, or too-precise question. The second beat comes from dry, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and calm color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is ethical. The scene becomes interesting when the patient part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their contained trait governs the recalculation; their observant trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from reliable: a pause, look, posture shift, or too-precise question. The second beat comes from contained, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let dry color the interpretation and dry color the response.

M. Scene Seed Bank

- Give Doc / S-769769 a scene where being methodical solves the practical problem but damages a relationship.
- Put Doc / S-769769 with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Doc / S-769769 did not know they had.
- Write a low-stakes competition where Doc / S-769769's calm side becomes unexpectedly intense.
- Give Doc / S-769769 information that would help them win an argument but hurt someone if revealed.
- Force Doc / S-769769 to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Doc / S-769769 does in the three seconds after realizing it failed.
- Have another character misunderstand Doc / S-769769's precise behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Doc / S-769769 without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Doc / S-769769 asks why or pretends not to care.
- Write a scene where Doc / S-769769 has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Doc / S-769769 to the single adjective 'methodical'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: methodical
02. Secondary trait: calm

03. Contradictory trait: precise
04. Social pressure trait: patient
05. Hidden-useful trait: pragmatic
06. Wants to keep people alive/informed without stripping them of choice
07. Needs to balance competence with emotional transparency
08. Core fear cluster: preventable harm; being forced to act without enough information
09. Pressure point: crisis compresses their language even further
10. Role: stabilizer; information and care-oriented presence
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: quiet food/drink routines
22. Likely comfort: inside jokes that survive context changes
23. Likely comfort: people who say what they mean
24. Likely comfort: private creative time
25. Likely comfort: specific compliments
26. Likely friction: jokes that require a real victim
27. Likely friction: needless ambiguity
28. Likely friction: being cornered into instant disclosure
29. Likely friction: performative concern
30. Likely friction: consequences being treated as temporary
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

05 Scarf

CORE CAST

PRONOUNS	open
SPECIES / TYPE	open
AGE	open
STORY ROLE	social connector; pressure-release presence

Writing thesis: Scarf should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being social and adaptive, wanting to keep people connected and talking, and needing to know when not to turn tension into a bit.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Scarf is active in the core network.
- Current pronouns/species/age remain open.
- Scarf functions well as a social connector and pressure-release presence.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact pronouns remain open until explicitly locked.
- Exact species/type remains open.
- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between social and adaptive. The silhouette should communicate how Scarf occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'social' trait readable at rest and the 'adaptive' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: social • adaptive • warm • clever • curious • casually bold • perceptive • playful • loyal • flexible

WANTS	keep people connected and talking
NEEDS	know when not to turn tension into a bit
FEARS	a room becoming emotionally unreachable
PRESSURE POINT	can overuse humor as bridge material

Internal tension	How to write it
Social vs. Curious	Both are true. Do not pick one permanently. Under low pressure, social can dominate; under relational or public pressure, curious may interrupt it, creating behavior that feels inconsistent only from the outside.
Adaptive vs. Casually Bold	Both are true. Do not pick one permanently. Under low pressure, adaptive can dominate; under relational or public pressure, casually bold may interrupt it, creating behavior that feels inconsistent only from the outside.
Warm vs. Perceptive	Both are true. Do not pick one permanently. Under low pressure, warm can dominate; under relational or public pressure, perceptive may interrupt it, creating behavior that feels inconsistent only from the outside.

Clever vs. Playful	Both are true. Do not pick one permanently. Under low pressure, clever can dominate; under relational or public pressure, playful may interrupt it, creating behavior that feels inconsistent only from the outside.
Curious vs. Loyal	Both are true. Do not pick one permanently. Under low pressure, curious can dominate; under relational or public pressure, loyal may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their social side becomes less guarded; they spend less effort managing how they are read and allow clever behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The adaptive trait shapes what they notice; curious shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The clever side becomes more exacting, while perceptive determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing curious / playful contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through playful; their mistake risk is letting social justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their loyal trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their social trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

25. 1. NOTICE - Scarf first filters a situation through social: what detail feels immediately important?
26. 2. CLASSIFY - the adaptive side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
27. 3. PROTECT - before choosing an action, they protect a self-image connected to being warm. This is where a flaw can hide inside a virtue.
28. 4. CHOOSE - they select the move most likely to help them keep people connected and talking. Under pressure, this short-term goal can conflict with what they actually need: know when not to turn tension into a bit.
29. 5. REVISE - if another person reacts unexpectedly, the clever trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
30. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Scarf from a line with the name tag removed?
- Does the line reflect at least one of: social, adaptive, warm - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

companion

Scarf is most useful when a scene needs someone socially agile enough to move between seriousness and absurdity without making either side feel fake.

- Scarf remains part of the continuing cast after the Found in the Noise reset.
- Specific species, age, and deeper backstory remain open in current canon.

Visual & Physical Direction

- Keep the scarf itself as the obvious recurring design motif unless later canon says the name is unrelated.
- Let the scarf change position with mood - loose in relaxed scenes, wrapped closer under stress - without turning it into magical symbolism.
- Favor a recognizable silhouette that remains readable next to more visually elaborate nonhuman characters.
- Use expressive hands and posture if the face design is comparatively restrained.

Personality Architecture

adaptable, socially quick, teasing, empathetic, restless, observant in a less analytical way than Naki or Mako, bold about breaking awkward silence, serious when the stakes become real.

WANTS To keep the group connected even when tension makes everyone retreat into separate corners.

NEEDS To accept that not every conflict should be joked through.

FEARS Watching a group fracture while everyone waits for someone else to say the obvious thing.

PRESSURE POINT Cold silence after something has gone wrong.

Voice & Dialogue Guide

- Conversational and quick.
- Comfortable with teasing nicknames if the relationship supports it.
- Will intentionally say the awkward thing first.
- Jokes shorten rather than lengthen during real danger.
- Can translate one person's emotional meaning into language another person will actually hear.
- Avoid nonstop quipping; silence should still exist.

Competencies

Social mediation • Reading conversational momentum • Improvisation • Keeping people engaged • Redirecting tension • Remembering group dynamics

Weaknesses, Friction & Failure Modes

- May joke too early
- Can insert themselves into conflicts that need privacy
- Sometimes confuses movement with progress
- Can be nosy
- May hide their own discomfort by helping others talk
- Can underestimate how long harm lasts

Relationship Dynamics

- Naki: Good for eliciting small reactions and making Naki participate without forcing him into emotional performance.
- Mako: Scarf can challenge Mako's tendency to sit outside a group dynamic and analyze it.
- Doc: Complementary pairing: Scarf handles people while Doc handles logistics, though each can annoy the other by crossing lanes.
- Blade: Can recognize the Naki-Blade shift before either one is willing to label it.
- Joel: Potential chaos multiplier; together they need a responsible character nearby.

Arc Trajectory

- 1. Begin as a reliable social lubricant.
- 2. Let one badly timed joke create a genuine need for repair.
- 3. Use the prank war to show both playful instinct and growing awareness of limits.
- 4. After Ivan, let Scarf learn that returning a room to laughter is not the same thing as returning it to normal.
- 5. Long-term growth: become better at asking whether people want levity, advice, or quiet.

Scene-Writing Guide

- Use Scarf to open group scenes fast.
- Place them between characters who are avoiding each other.
- Let physical fidgeting with the scarf carry subtext.
- Give them occasional perceptive lines that surprise more “serious” characters.
- Do not make them the comic relief in every scene.
- Their best emotional scenes should involve restraint, because that contrasts the baseline.

Continuity Redlines

- Keep species/gender open unless the canon later locks them.
- No magical scarf abilities.
- Do not reduce Scarf to a joke dispenser.
- Do not use levity to erase consequences of the Ivan incident.

Story Hooks & Chapter Seeds

- Scarf is the first to call the prank war a war and accidentally makes everyone commit harder.
- A private apology scene reveals Scarf is much more careful with words than the group assumes.
- Scarf catches Blade watching Naki and decides not to tease him - yet.
- Scarf and Doc argue about whether a gathering should continue after a frightening event.
- An old scarf repair becomes a small visual marker of surviving a bad period.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
rooms where silence is allowed	being cornered into instant disclosure
winning fairly	carelessness with private information
low-stakes competition	jokes that require a real victim
clever solutions	consequences being treated as temporary
unforced physical comfort	public humiliation
inside jokes that survive context changes	people treating boundaries as challenges
objects with personal history	fake apologies
repair after conflict	social tests nobody agreed to

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?

- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of a room becoming emotionally unreachable can make normal social behavior harden into a defense.
- Common mistake: using warm as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Naki: social counterweight.

Mako/group: connector.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Scarf, keep the central pressure tied to wanting to keep people connected and talking while actually needing to know when not to turn tension into a bit.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Scarf, keep the central pressure tied to wanting to keep people connected and talking while actually needing to know when not to turn tension into a bit.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Scarf, keep the central pressure tied to wanting to keep people connected and talking while actually needing to know when not to turn tension into a bit.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Scarf, keep the central pressure tied to wanting to keep people connected and talking while actually needing to know when not to turn tension into a bit.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Scarf, keep the central pressure tied to wanting to keep people connected and talking while actually needing to know when not to turn tension into a bit.
Behavioral proof	Growth is shown through a new action under pressure, not a speech

	claiming they changed. For Scarf, keep the central pressure tied to wanting to keep people connected and talking while actually needing to know when not to turn tension into a bit.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Scarf, keep the central pressure tied to wanting to keep people connected and talking while actually needing to know when not to turn tension into a bit.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from social: a pause, look, posture shift, or too-precise question. The second beat comes from adaptive, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptive color the interpretation and clever color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is warm. The scene becomes interesting when the casually bold part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their clever trait governs the recalculation; their playful trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from curious: a pause, look, posture shift, or too-precise question. The second beat comes from flexible, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let casually bold color the interpretation and adaptive color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is perceptive. The scene becomes interesting when the clever part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their playful trait governs the recalculation; their casually bold trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from playful, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let flexible color the interpretation and flexible color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is social. The scene becomes interesting when the adaptive part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their adaptive trait governs the recalculation; their clever trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from warm: a pause, look, posture shift, or too-precise question. The second beat comes from casually bold, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let clever color the interpretation and playful color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is curious. The scene becomes interesting when the flexible part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their casually bold trait governs the recalculation; their adaptive trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from perceptive: a pause, look, posture shift, or too-precise question. The second beat comes from clever, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let playful color the interpretation and casually bold color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the playful part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their flexible trait governs the recalculation; their flexible trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from social: a pause, look, posture shift, or too-precise question. The second beat comes from adaptive, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptive color the interpretation and clever color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is warm. The scene becomes interesting when the casually bold part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their clever trait governs the recalculation; their playful trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from curious: a pause, look, posture shift, or too-precise question. The second beat comes from flexible, which determines whether they approach, deflect, challenge, or wait.

26. When they win but the other person is genuinely upset: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let casually bold color the interpretation and adaptive color the response.

27. When a family member makes a decision they hate: Their instinct is to protect their self-image as someone who is perceptive. The scene becomes interesting when the clever part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their playful trait governs the recalculation; their casually bold trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from playful, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let flexible color the interpretation and flexible color the response.

M. Scene Seed Bank

- Give Scarf a scene where being social solves the practical problem but damages a relationship.
- Put Scarf with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Scarf did not know they had.
- Write a low-stakes competition where Scarf's adaptive side becomes unexpectedly intense.
- Give Scarf information that would help them win an argument but hurt someone if revealed.
- Force Scarf to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Scarf does in the three seconds after realizing it failed.
- Have another character misunderstand Scarf's warm behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Scarf without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Scarf asks why or pretends not to care.
- Write a scene where Scarf has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Scarf to the single adjective 'social'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: social
02. Secondary trait: adaptive
03. Contradictory trait: warm
04. Social pressure trait: clever
05. Hidden-useful trait: curious
06. Wants to keep people connected and talking
07. Needs to know when not to turn tension into a bit
08. Core fear cluster: a room becoming emotionally unreachable
09. Pressure point: can overuse humor as bridge material
10. Role: social connector; pressure-release presence
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.

15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: rooms where silence is allowed
22. Likely comfort: winning fairly
23. Likely comfort: low-stakes competition
24. Likely comfort: clever solutions
25. Likely comfort: unforced physical comfort
26. Likely friction: being cornered into instant disclosure
27. Likely friction: carelessness with private information
28. Likely friction: jokes that require a real victim
29. Likely friction: consequences being treated as temporary
30. Likely friction: public humiliation
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

06 Ivan

ANTAGONIST / INCIDENT

PRONOUNS	he/him
SPECIES / TYPE	open
AGE	open
STORY ROLE	source of the gun incident and lasting safety rupture

Writing thesis: Ivan should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being volatile and defensive, wanting to avoid consequences and retain control of the story around his actions, and needing to face accountability rather than treating explanation as absolution.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Ivan is male.
- During the Ivan incident, he wields multiple guns and everyone gets hit.
- The incident has lasting consequences for trust and safety; it is not slapstick and does not reset immediately afterward.
- Emily Nanacea is Ivan's lawyer.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between volatile and defensive. The silhouette should communicate how Ivan occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'volatile' trait readable at rest and the 'defensive' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: volatile • defensive • reckless • controlling • unpredictable • resentful • argumentative • strategic when cornered • denying • escalatory

WANTS	avoid consequences and retain control of the story around his actions
NEEDS	face accountability rather than treating explanation as absolution
FEARS	loss of power and social standing
PRESSURE POINT	challenge to his self-justification

Internal tension	How to write it
Volatile vs. Unpredictable	Both are true. Do not pick one permanently. Under low pressure, volatile can dominate; under relational or public pressure, unpredictable may interrupt it, creating behavior that feels inconsistent only from the outside.
Defensive vs. Resentful	Both are true. Do not pick one permanently. Under low pressure, defensive can dominate; under relational or public pressure, resentful may interrupt it, creating behavior that feels inconsistent only from the outside.

Reckless vs. Argumentative	Both are true. Do not pick one permanently. Under low pressure, reckless can dominate; under relational or public pressure, argumentative may interrupt it, creating behavior that feels inconsistent only from the outside.
Controlling vs. Strategic When Cornered	Both are true. Do not pick one permanently. Under low pressure, controlling can dominate; under relational or public pressure, strategic when cornered may interrupt it, creating behavior that feels inconsistent only from the outside.
Unpredictable vs. Denying	Both are true. Do not pick one permanently. Under low pressure, unpredictable can dominate; under relational or public pressure, denying may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their volatile side becomes less guarded; they spend less effort managing how they are read and allow controlling behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The defensive trait shapes what they notice; unpredictable shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The controlling side becomes more exacting, while argumentative determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing unpredictable / strategic when cornered contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through strategic when cornered; their mistake risk is letting volatile justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their denying trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their volatile trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

31. 1. NOTICE - Ivan first filters a situation through volatile: what detail feels immediately important?
32. 2. CLASSIFY - the defensive side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
33. 3. PROTECT - before choosing an action, they protect a self-image connected to being reckless. This is where a flaw can hide inside a virtue.
34. 4. CHOOSE - they select the move most likely to help them avoid consequences and retain control of the story around his actions. Under pressure, this short-term goal can conflict with what they actually need: face accountability rather than treating explanation as absolution.
35. 5. REVISE - if another person reacts unexpectedly, the controlling trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
36. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Ivan from a line with the name tag removed?
- Does the line reflect at least one of: volatile, defensive, reckless - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

CORE CAST / ANTAGONISTIC FORCE

incident and court arc

Ivan should feel dangerous not because the story makes him mysteriously superhuman, but because he is a person whose choices can abruptly turn a familiar social space into a place nobody recognizes.

- Ivan is male.
- He is part of the continuing cast after the reset.
- The story includes an "Ivan incident" in which Ivan wields multiple guns and everyone gets hit.
- Emily Nanacea acts as Ivan's lawyer and is not on the group's side during the court/trial arc.

Visual & Physical Direction

- Avoid visual shorthand that makes him look "evil" before he acts; familiarity makes the rupture more effective.
- Post-incident scenes can change how other characters frame ordinary movements around him even if his design remains the same.
- Keep weapon imagery limited to scenes where it is narratively relevant rather than turning guns into his permanent costume motif.
- Facial control or unreadability can be more unsettling than exaggerated snarling.

Personality Architecture

volatile under the surface, defensive, controlling when cornered, capable of social normalcy, resentful, rationalizing, prone to externalizing blame, dangerously willing to escalate.

WANTS Control over the narrative of what he did and why he did it.

NEEDS From a character-design perspective, accountability;

whether he accepts it is a separate question.

FEARS Loss of control, humiliation, and being defined entirely by

consequences he cannot reverse.

PRESSURE POINT

Situations where other people refuse his version of events.

Voice & Dialogue Guide

- Can sound ordinary, which keeps him from becoming a cartoon villain.
- Uses justification language when challenged.
- May reframe other people's fear as overreaction.
- Under legal pressure, becomes more careful about wording.
- Avoid theatrical villain monologues.
- When he loses control, syntax can shorten and become more repetitive.

Competencies

Reading familiar social weak points • Persistence • Self-justification • Strategic silence when advised • Ability to appear composed after escalation

Weaknesses, Friction & Failure Modes

- Escalation
- Entitlement to control
- Poor accountability
- Resentment
- Dangerous impulsivity
- Tendency to reinterpret consequences as persecution

Relationship Dynamics

- Emily: His lawyer and primary court-arc advocate; their relationship should remain professional/strategic unless later canon adds more.
- Mako: Mako is likely to treat Ivan as an ongoing safety risk after the incident.
- Naki: Ivan becomes associated with broken safety and distrust, not merely interpersonal dislike.
- Doc: Doc will prioritize concrete risk management around him.
- Group at large: The incident permanently changes the social meaning of his presence; no instant reset to ordinary friendship.

Arc Trajectory

- 1. Before the incident, preserve enough normal social texture that the escalation feels like a rupture.
- 2. The incident itself should be consequential and chaotic without glamorizing weapon use.
- 3. Afterward, shift into aftermath: injuries, fear, anger, fractured trust, practical decisions.
- 4. The court arc moves conflict from physical danger into competing narratives and accountability.
- 5. Long-term possibilities include conviction, denial, partial accountability, or continued antagonism; do not resolve him cheaply.

Scene-Writing Guide

- Write consequences into rooms before Ivan enters them.
- Let characters disagree about how much contact is acceptable afterward.
- Court scenes should focus on facts, memory, fear, and framing rather than legal-drama spectacle alone.
- Do not make weapon competence “cool.”
- If Ivan attempts remorse, make it specific and costly rather than a speech that demands forgiveness.
- His absence can carry tension if characters know he may reappear.

Continuity Redlines

- Do not portray the gun incident as harmless slapstick.
- Do not erase injuries/consequences by the next chapter.
- Do not let legal representation imply Emily endorses every action personally; her antagonistic stance can still be professional.
- No supernatural intimidation or invulnerability.

Story Hooks & Chapter Seeds

- A small disagreement over wording in testimony reveals how differently witnesses remember the same seconds.
- Ivan sends or relays a message that appears apologetic but centers himself.
- A character discovers they still instinctively look for exits when Ivan's name comes up.
- Emily challenges a detail the group assumed was uncontested.
- Someone from the group refuses to let Ivan turn “everyone survived” into “nothing serious happened.”

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
being given useful context	being cornered into instant disclosure
specific compliments	being reduced to one trait
objects with personal history	needless ambiguity
inside jokes that survive context changes	being spoken for
repair after conflict	unearned authority
unforced physical comfort	social tests nobody agreed to
being remembered accurately	consequences being treated as temporary
competence without showboating	fake apologies

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of loss of power and social standing can make normal volatile behavior harden into a defense.
- Common mistake: using reckless as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Emily: lawyer.

group: broken trust after multi-gun incident.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Ivan, keep the central pressure tied to wanting to avoid consequences and retain control of the story around his actions while actually needing to face accountability rather than treating explanation as absolution.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Ivan, keep the central pressure tied to wanting to avoid consequences and retain control of the story around his actions while actually needing to face accountability rather

	than treating explanation as absolution.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Ivan, keep the central pressure tied to wanting to avoid consequences and retain control of the story around his actions while actually needing to face accountability rather than treating explanation as absolution.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Ivan, keep the central pressure tied to wanting to avoid consequences and retain control of the story around his actions while actually needing to face accountability rather than treating explanation as absolution.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Ivan, keep the central pressure tied to wanting to avoid consequences and retain control of the story around his actions while actually needing to face accountability rather than treating explanation as absolution.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Ivan, keep the central pressure tied to wanting to avoid consequences and retain control of the story around his actions while actually needing to face accountability rather than treating explanation as absolution.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Ivan, keep the central pressure tied to wanting to avoid consequences and retain control of the story around his actions while actually needing to face accountability rather than treating explanation as absolution.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from volatile: a pause, look, posture shift, or too-precise question. The second beat comes from defensive, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let defensive color the interpretation and controlling color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is reckless. The scene becomes interesting when the resentful part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their controlling trait governs the recalculation; their strategic when cornered trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from unpredictable: a pause, look, posture shift, or too-precise question. The second beat comes from escalatory, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let resentful color the interpretation and defensive color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is argumentative. The scene becomes interesting when the controlling part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their strategic when cornered trait governs the recalculation; their resentful trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from denying: a pause, look, posture shift, or too-precise question. The second beat comes from strategic when cornered, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let escalatory color the interpretation and escalatory color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is volatile. The scene becomes interesting when the defensive part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their defensive trait governs the recalculation; their controlling trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from reckless: a pause, look, posture shift, or too-precise question. The second beat comes from resentful, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let controlling color the interpretation and strategic when cornered color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is unpredictable. The scene becomes interesting when the escalatory part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their resentful trait governs the recalculation; their defensive trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from argumentative: a pause, look, posture shift, or too-precise question. The second beat comes from controlling, which determines whether they approach, deflect, challenge, or wait.

18. When they have five quiet minutes with the person they trust most: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let strategic when cornered color the interpretation and resentful color the response.

19. When they have to ask for help: Their instinct is to protect their self-image as someone who is denying. The scene becomes interesting when the strategic when cornered part of them pushes in the opposite direction.

20. When they know a secret they are not entitled to share: Use a two-step reaction: internal recalculation, then social choice. Their escalatory trait governs the recalculation; their escalatory trait governs what other people actually get to see.

21. When someone apologizes badly: The first visible tell should come from volatile: a pause, look, posture shift, or too-precise question. The second beat comes from defensive, which determines whether they approach, deflect, challenge, or wait.

22. When someone apologizes well: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let defensive color the interpretation and controlling color the response.

23. When they are bored: Their instinct is to protect their self-image as someone who is reckless. The scene becomes interesting when the resentful part of them pushes in the opposite direction.

24. When they are overstimulated by a loud social scene: Use a two-step reaction: internal recalculation, then social choice. Their controlling trait governs the recalculation; their strategic when cornered trait governs what other people actually get to see.

25. When they lose a competition by a tiny margin: The first visible tell should come from unpredictable: a pause, look, posture shift, or too-precise question. The second beat comes from escalatory, which determines whether they approach, deflect, challenge, or wait.

26. When they win but the other person is genuinely upset: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let resentful color the interpretation and defensive color the response.

27. When a family member makes a decision they hate: Their instinct is to protect their self-image as someone who is argumentative. The scene becomes interesting when the controlling part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their strategic when cornered trait governs the recalculation; their resentful trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from denying: a pause, look, posture shift, or too-precise question. The second beat comes from strategic when cornered, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let escalatory color the interpretation and escalatory color the response.

M. Scene Seed Bank

- Give Ivan a scene where being volatile solves the practical problem but damages a relationship.
- Put Ivan with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Ivan did not know they had.
- Write a low-stakes competition where Ivan's defensive side becomes unexpectedly intense.
- Give Ivan information that would help them win an argument but hurt someone if revealed.
- Force Ivan to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Ivan does in the three seconds after realizing it failed.
- Have another character misunderstand Ivan's reckless behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Ivan without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Ivan asks why or pretends not to care.
- Write a scene where Ivan has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Ivan to the single adjective 'volatile'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.

- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.
- Do not glamorize the gun incident or use it as slapstick.
- Do not erase injury, legal, or trust consequences immediately.

O. 50-Point Quick Reference

01. Primary trait: volatile
02. Secondary trait: defensive
03. Contradictory trait: reckless
04. Social pressure trait: controlling
05. Hidden-useful trait: unpredictable
06. Wants to avoid consequences and retain control of the story around his actions
07. Needs to face accountability rather than treating explanation as absolution
08. Core fear cluster: loss of power and social standing
09. Pressure point: challenge to his self-justification
10. Role: source of the gun incident and lasting safety rupture
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: being given useful context
22. Likely comfort: specific compliments
23. Likely comfort: objects with personal history
24. Likely comfort: inside jokes that survive context changes
25. Likely comfort: repair after conflict
26. Likely friction: being cornered into instant disclosure
27. Likely friction: being reduced to one trait
28. Likely friction: needless ambiguity
29. Likely friction: being spoken for
30. Likely friction: unearned authority
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

07 Markov

MAKO HOUSEHOLD

PRONOUNS	he/him
SPECIES / TYPE	Noctaruk
AGE	younger than Mako
STORY ROLE	Mako's adoptive younger brother

Writing thesis: Markov should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being self-possessed and alert, wanting to belong without adoption being treated as a qualifier, and needing to claim autonomy inside a protective household.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Markov is a Noctaruk.
- He is Mako's adoptive younger brother.
- He has black-and-white fur, a humanoid shark-like body, digitigrade legs, a shark tail, fin structures, and a defined snout.
- He lives with Mako and Amy.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Black-and-white Noctaruk patterning, defined shark-like snout, fins, digitigrade legs, and shark tail should read as one coherent anatomy rather than pasted-on traits. Movement should account for tail balance and a low, grounded center of gravity.

- Primary silhouette rule: body language should make the 'self-possessed' trait readable at rest and the 'alert' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: self-possessed • alert • loyal • physical • independent • curious • stubborn • wry • protective • adaptable

WANTS	belong without adoption being treated as a qualifier
NEEDS	claim autonomy inside a protective household
FEARS	being treated as less-family or overprotected
PRESSURE POINT	protectiveness can become a fight about agency

Internal tension	How to write it
Self-Possessed vs. Independent	Both are true. Do not pick one permanently. Under low pressure, self-possessed can dominate; under relational or public pressure, independent may interrupt it, creating behavior that feels inconsistent only from the outside.
Alert vs. Curious	Both are true. Do not pick one permanently. Under low pressure, alert can dominate; under relational or public pressure, curious may interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Stubborn	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, stubborn may interrupt it, creating behavior that feels inconsistent only from the outside.
Physical vs. Wry	Both are true. Do not pick one permanently. Under low pressure, physical

	can dominate; under relational or public pressure, wry may interrupt it, creating behavior that feels inconsistent only from the outside.
Independent vs. Protective	Both are true. Do not pick one permanently. Under low pressure, independent can dominate; under relational or public pressure, protective may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their self-possessed side becomes less guarded; they spend less effort managing how they are read and allow physical behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The alert trait shapes what they notice; independent shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The physical side becomes more exacting, while stubborn determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing independent / wry contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through wry; their mistake risk is letting self-possessed justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their protective trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their self-possessed trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

37. 1. NOTICE - Markov first filters a situation through self-possessed: what detail feels immediately important?
38. 2. CLASSIFY - the alert side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
39. 3. PROTECT - before choosing an action, they protect a self-image connected to being loyal. This is where a flaw can hide inside a virtue.
40. 4. CHOOSE - they select the move most likely to help them belong without adoption being treated as a qualifier. Under pressure, this short-term goal can conflict with what they actually need: claim autonomy inside a protective household.
41. 5. REVISE - if another person reacts unexpectedly, the physical trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
42. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Markov from a line with the name tag removed?
- Does the line reflect at least one of: self-possessed, alert, loyal - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

MAKO HOUSEHOLD

Markov should feel like family first and a striking creature design second: the shark-like body is normal in his world, while the relationship with Mako is where his scenes earn emotional weight.

- Markov is Mako's adoptive younger brother and is not biologically related to him.
- He is a Noctaruk, not a sawian.
- He has black-and-white fur, a humanoid shark-like body, digitigrade legs, a shark tail, fin structures, and a defined snout.
- He lives with Mako and Amy.

Visual & Physical Direction

- The black-and-white pattern should remain consistent enough to identify him instantly.
- His shark tail needs enough clearance in environments; staging should acknowledge it rather than clipping it through furniture.
- Digitigrade legs change his resting poses, sitting habits, and movement silhouette.
- Fin structures and defined snout should read clearly in profile.
- Avoid reducing Noctaruk design to "shark head on human body"; the anatomy should feel integrated.

Personality Architecture

independent, family-oriented, quick to notice condescension, curious, physically expressive, capable of sibling sarcasm, protective of Amy in his own way, sensitive to being treated as "the adopted one".

WANTS To be trusted as a full participant in family decisions.

NEEDS To distinguish protection from exclusion when Mako becomes overprotective.

FEARS Being treated as temporary or less central to the household because he is adopted.

PRESSURE POINT Any wording that ranks biological and adoptive family.

Voice & Dialogue Guide

- Casual with siblings.
- More direct when he thinks Mako is over-managing.
- Uses physical reactions and tail movement as extra punctuation.
- Can turn dry when someone overexplains obvious things.

- Avoid shark puns as a constant gimmick.
- Affection is often expressed through showing up rather than sentimental speeches.

Competencies

Strong spatial awareness • Household routines • Reading Mako's moods • Physical coordination adapted to digitigrade anatomy • Sibling-level social leverage • Keeping Amy included

Weaknesses, Friction & Failure Modes

- Can become oppositional when feeling managed
- May reject help just to prove independence
- Sensitive to adoption-related assumptions
- Can hide worry under sarcasm
- Sometimes escalates sibling arguments for sport
- May underestimate genuine risk to avoid seeming sheltered

Relationship Dynamics

- Mako: Adoptive older brother. Love and friction coexist; the core conflict is often not whether Mako cares, but whether care becomes control.
- Amy: Household sibling bond. They can coordinate against Mako, annoy each other, and defend each other without the story ranking one relationship as more “real.”
- Mako's friends: Markov has grown up or spent enough time around them to have opinions that do not always match Mako's.
- Naki: Potentially easier peer-ish rapport than Mako expects, especially around being visually distinctive without wanting constant commentary.

Arc Trajectory

- 1. Establish ordinary family rhythms.
- 2. Give Markov a decision Mako wants to make for him.
- 3. Let Markov prove judgment without making Mako stupid for worrying.
- 4. After major danger, explore the difference between “keep him safe” and “let him have agency.”
- 5. Long-term growth: ask for trust directly instead of testing it through defiance.

Scene-Writing Guide

- Tail and digitigrade anatomy should affect blocking.
- Use sibling interruptions for lived-in dialogue.
- Let him know embarrassing mundane facts about Mako.
- Avoid exoticizing his species.
- Give him scenes where adoption is irrelevant because family is simply assumed.
- When adoption does matter, make the issue specific rather than melodramatic.

Continuity Redlines

- Markov is a Noctaruk, not a sawian.
- Do not imply Amy is “more” Mako's sibling because she is biological.
- No magic shark powers.

Story Hooks & Chapter Seeds

- Markov objects to being excluded from a family safety conversation.
- Amy and Markov team up to expose one of Mako's obvious tells.
- A visitor mistakes adoption for distance and gets corrected immediately.
- Markov finds a household rule that exists only because Mako worries.
- A quiet kitchen scene lets Markov ask Mako whether he actually trusts him.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
specific compliments	people treating boundaries as challenges
competence without showboating	performative concern
being remembered accurately	being spoken for
people who say what they mean	needless ambiguity
repair after conflict	social tests nobody agreed to
rooms where silence is allowed	carelessness with private information
quiet food/drink routines	unearned authority
inside jokes that survive context changes	being cornered into instant disclosure

- What object do they always know the location of?

- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of being treated as less-family or overprotected can make normal self-possessed behavior harden into a defense.
- Common mistake: using loyal as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Mako: adoptive older brother.

Amy: household sibling.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Markov, keep the central pressure tied to wanting to belong without adoption being treated as a qualifier while actually needing to claim autonomy inside a protective household.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Markov, keep the central pressure tied to wanting to belong without adoption being treated as a qualifier while actually needing to claim autonomy inside a protective household.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Markov, keep the central pressure tied to wanting to belong without adoption being treated as a qualifier while actually needing to claim autonomy inside a protective household.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Markov, keep the central pressure tied to wanting to belong without adoption being treated as a qualifier while actually needing to claim autonomy inside a protective household.
Choice point	Force a decision where protecting the old self-image conflicts with

	protecting the relationship or value they actually care about. For Markov, keep the central pressure tied to wanting to belong without adoption being treated as a qualifier while actually needing to claim autonomy inside a protective household.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Markov, keep the central pressure tied to wanting to belong without adoption being treated as a qualifier while actually needing to claim autonomy inside a protective household.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Markov, keep the central pressure tied to wanting to belong without adoption being treated as a qualifier while actually needing to claim autonomy inside a protective household.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from self-possessed: a pause, look, posture shift, or too-precise question. The second beat comes from alert, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let alert color the interpretation and physical color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the curious part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their physical trait governs the recalculation; their wry trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from independent: a pause, look, posture shift, or too-precise question. The second beat comes from adaptable, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let curious color the interpretation and alert color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is stubborn. The scene becomes interesting when the physical part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their wry trait governs the recalculation; their curious trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from wry, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptable color the interpretation and adaptable color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is self-possessed. The scene becomes interesting when the alert part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their alert trait governs the recalculation; their physical trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from curious, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let physical color the interpretation and wry color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is independent. The scene becomes interesting when the adaptable part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their curious trait governs the recalculation; their alert trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from stubborn: a pause, look, posture shift, or too-precise question. The second beat comes from physical, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let wry color the interpretation and curious color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is protective. The scene becomes interesting when the wry part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their adaptable trait governs the recalculation; their adaptable trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from self-possessed: a pause, look, posture shift, or too-precise question. The second beat comes from alert, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let alert color the interpretation and physical color the response.

23. When they are bored: Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the curious part of them pushes in the opposite direction.

24. When they are overstimulated by a loud social scene: Use a two-step reaction: internal recalculation, then social choice. Their physical trait governs the recalculation; their wry trait governs what other people actually get to see.

25. When they lose a competition by a tiny margin: The first visible tell should come from independent: a pause, look, posture shift, or too-precise question. The second beat comes from adaptable, which determines whether they approach, deflect, challenge, or wait.

26. When they win but the other person is genuinely upset: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let curious color the interpretation and alert color the response.

27. When a family member makes a decision they hate: Their instinct is to protect their self-image as someone who is stubborn. The scene becomes interesting when the physical part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their wry trait governs the recalculation; their curious trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from wry, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptable color the interpretation and adaptable color the response.

M. Scene Seed Bank

- Give Markov a scene where being self-possessed solves the practical problem but damages a relationship.
- Put Markov with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Markov did not know they had.
- Write a low-stakes competition where Markov's alert side becomes unexpectedly intense.
- Give Markov information that would help them win an argument but hurt someone if revealed.
- Force Markov to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Markov does in the three seconds after realizing it failed.
- Have another character misunderstand Markov's loyal behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Markov without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Markov asks why or pretends not to care.
- Write a scene where Markov has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Markov to the single adjective 'self-possessed'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: self-possessed
02. Secondary trait: alert
03. Contradictory trait: loyal
04. Social pressure trait: physical
05. Hidden-useful trait: independent
06. Wants to belong without adoption being treated as a qualifier
07. Needs to claim autonomy inside a protective household
08. Core fear cluster: being treated as less-family or overprotected

09. Pressure point: protectiveness can become a fight about agency
10. Role: Mako's adoptive younger brother
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: specific compliments
22. Likely comfort: competence without showboating
23. Likely comfort: being remembered accurately
24. Likely comfort: people who say what they mean
25. Likely comfort: repair after conflict
26. Likely friction: people treating boundaries as challenges
27. Likely friction: performative concern
28. Likely friction: being spoken for
29. Likely friction: needless ambiguity
30. Likely friction: social tests nobody agreed to
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

08 Amy

MAKO HOUSEHOLD

PRONOUNS	she/her
SPECIES / TYPE	human-presenting; exact type open
AGE	younger than Mako
STORY ROLE	Mako's biological little sister; domestic grounding

Writing thesis: Amy should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being bright and observant, wanting to have room to grow without everyone pre-solving her life, and needing to be allowed to make age-appropriate mistakes.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Amy is Mako's biological little sister.
- She has brown eyes and brown hair with pink ends.
- She lives with Mako and Markov.
- She was away during an earlier house tour, explaining her earlier absence.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Brown eyes and brown hair with pink ends are fixed visual anchors. Her design should remain readable beside much more visually elaborate nonhuman relatives; small personal styling choices can do more work than excessive accessories.

- Primary silhouette rule: body language should make the 'bright' trait readable at rest and the 'observant' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: bright • observant • independent • affectionate • curious • practical • stubborn • expressive • perceptive • playful

WANTS	have room to grow without everyone pre-solving her life
NEEDS	be allowed to make age-appropriate mistakes
FEARS	being left outside serious family conversations
PRESSURE POINT	being protected through omission

Internal tension	How to write it
Bright vs. Curious	Both are true. Do not pick one permanently. Under low pressure, bright can dominate; under relational or public pressure, curious may interrupt it, creating behavior that feels inconsistent only from the outside.
Observant vs. Practical	Both are true. Do not pick one permanently. Under low pressure, observant can dominate; under relational or public pressure, practical may interrupt it, creating behavior that feels inconsistent only from the outside.
Independent vs. Stubborn	Both are true. Do not pick one permanently. Under low pressure, independent can dominate; under relational or public pressure, stubborn may interrupt it, creating behavior that feels inconsistent only from the outside.

Affectionate vs. Expressive	Both are true. Do not pick one permanently. Under low pressure, affectionate can dominate; under relational or public pressure, expressive may interrupt it, creating behavior that feels inconsistent only from the outside.
Curious vs. Perceptive	Both are true. Do not pick one permanently. Under low pressure, curious can dominate; under relational or public pressure, perceptive may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their bright side becomes less guarded; they spend less effort managing how they are read and allow affectionate behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The observant trait shapes what they notice; curious shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The affectionate side becomes more exacting, while stubborn determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing curious / expressive contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through expressive; their mistake risk is letting bright justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their perceptive trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their bright trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

43. 1. NOTICE - Amy first filters a situation through bright: what detail feels immediately important?
44. 2. CLASSIFY - the observant side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
45. 3. PROTECT - before choosing an action, they protect a self-image connected to being independent. This is where a flaw can hide inside a virtue.
46. 4. CHOOSE - they select the move most likely to help them have room to grow without everyone pre-solving her life. Under pressure, this short-term goal can conflict with what they actually need: be allowed to make age-appropriate mistakes.
47. 5. REVISE - if another person reacts unexpectedly, the affectionate trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
48. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Amy from a line with the name tag removed?
- Does the line reflect at least one of: bright, observant, independent - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

MAKO HOUSEHOLD

Amy gives the household another center of gravity: she is not simply “the little sister,” but someone who knows exactly how Mako and Markov behave when nobody is performing for outsiders.

- Amy is Mako's biological little sister.
- She has brown eyes.
- She has brown hair with pink ends.
- She lives with Mako and Markov.
- She was away during an earlier house tour, explaining why she was not seen then.

Visual & Physical Direction

- Brown hair with pink ends is a locked identity cue.
- Brown eyes should remain natural and readable.
- Her clothing can make the pink hair ends feel integrated rather than like a single isolated color accent.
- Home scenes should show comfort with the space - sitting where guests would not, using habitual routes, leaving personal objects around.
- Avoid visually infantilizing her solely because she is younger than Mako.

Personality Architecture

perceptive, family-savvy, teasing, warm, independent, good at spotting overprotectiveness, socially adaptable, more willing than Mako to say when a room feels weird.

WANTS To be included in the truth of what is happening around her household.

NEEDS To choose when she wants protection instead of treating every offer of help as an insult.

FEARS That serious events will cause the household to start hiding things from one another “for safety.”

PRESSURE POINT Being told not to worry without being given facts.

Voice & Dialogue Guide

- Direct with Mako.

- Comfortably sarcastic with Markov.
- More socially flexible with guests than either brother may expect.
- Can use one innocent-sounding question to expose that Mako is hiding concern.
- Avoid babyish speech.
- When frightened, she wants concrete information.

Competencies

Reading family moods • Calling out avoidance • Social adaptation • Remembering domestic details • Bringing tense conversations back to practical reality • Getting honest answers out of Mako

Weaknesses, Friction & Failure Modes

- Can push for information at bad times
- May treat protectiveness as condescension too quickly
- Sibling teasing can hit a real nerve
- Sometimes overestimates how much she can manage alone
- Can become stubborn when excluded
- May use humor to keep from showing fear

Relationship Dynamics

- Mako: Older brother. She knows his control habits and can challenge them without being intimidated by his presence.
- Markov: Sibling bond based on shared household life; adoption does not diminish closeness.
- Mako's friends: Amy can provide an outsider-insider perspective: she knows them, but she does not participate in every group history.
- Naki: Potential quieter rapport; both value concrete information when a room is emotionally messy.

Arc Trajectory

- 1. Introduce her through ordinary household familiarity rather than a dramatic reveal.
- 2. Let her become relevant to the group in her own right.
- 3. Use danger to test whether the family communicates or starts hiding things.
- 4. Give Amy a choice that both brothers disagree about.
- 5. Long-term growth: build a model of family protection that includes consent and transparency.

Scene-Writing Guide

- Use mundane sibling logistics to make serious scenes feel real.
- Let Amy interrupt Mako's "responsible" persona with a detail from home.
- Her pink hair ends can be a visual callback in crowded scenes.
- Avoid making her only a hostage or someone to protect.
- Give her competence in areas Mako lacks.
- She should be able to leave scenes by choice, not always because an older sibling dismisses her.

Continuity Redlines

- Brown eyes; brown hair with pink ends.
- She is Mako's biological little sister.
- Markov is equally family despite being adopted.

Story Hooks & Chapter Seeds

- Amy returns to a changed household atmosphere and immediately realizes something happened.
- She finds court-prep materials that Mako hoped she would not have to see.
- Amy and Markov compare notes on how Mako acts when he is hiding worry.
- She confronts someone who speaks about Markov as if he were "less related."
- A quiet scene reveals Amy is angry not because she was protected, but because nobody explained the plan.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
low-stakes competition	needless ambiguity
winning fairly	social tests nobody agreed to
inside jokes that survive context changes	jokes that require a real victim
unforced physical comfort	being spoken for
private creative time	being cornered into instant disclosure
quiet food/drink routines	public humiliation
people who say what they mean	people treating boundaries as challenges
being given useful context	carelessness with private information

- What object do they always know the location of?

- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of being left outside serious family conversations can make normal bright behavior harden into a defense.
- Common mistake: using independent as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Mako: older brother.

Markov: household sibling.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Amy, keep the central pressure tied to wanting to have room to grow without everyone pre-solving her life while actually needing to be allowed to make age-appropriate mistakes.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Amy, keep the central pressure tied to wanting to have room to grow without everyone pre-solving her life while actually needing to be allowed to make age-appropriate mistakes.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Amy, keep the central pressure tied to wanting to have room to grow without everyone pre-solving her life while actually needing to be allowed to make age-appropriate mistakes.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Amy, keep the central pressure tied to wanting to have room to grow without everyone pre-solving her life while actually needing to be allowed to make age-appropriate mistakes.
Choice point	Force a decision where protecting the old self-image conflicts with

	protecting the relationship or value they actually care about. For Amy, keep the central pressure tied to wanting to have room to grow without everyone pre-solving her life while actually needing to be allowed to make age-appropriate mistakes.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Amy, keep the central pressure tied to wanting to have room to grow without everyone pre-solving her life while actually needing to be allowed to make age-appropriate mistakes.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Amy, keep the central pressure tied to wanting to have room to grow without everyone pre-solving her life while actually needing to be allowed to make age-appropriate mistakes.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from bright: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and affectionate color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is independent. The scene becomes interesting when the practical part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their affectionate trait governs the recalculation; their expressive trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from curious: a pause, look, posture shift, or too-precise question. The second beat comes from playful, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let practical color the interpretation and observant color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is stubborn. The scene becomes interesting when the affectionate part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their expressive trait governs the recalculation; their practical trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from perceptive: a pause, look, posture shift, or too-precise question. The second beat comes from expressive, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let playful color the interpretation and playful color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is bright. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their affectionate trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from independent: a pause, look, posture shift, or too-precise question. The second beat comes from practical, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let affectionate color the interpretation and expressive color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is curious. The scene becomes interesting when the playful part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their practical trait governs the recalculation; their observant trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from stubborn: a pause, look, posture shift, or too-precise question. The second beat comes from affectionate, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let expressive color the interpretation and practical color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is perceptive. The scene becomes interesting when the expressive part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their playful trait governs the recalculation; their playful trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from bright: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and affectionate color the response.

23. When they are bored: Their instinct is to protect their self-image as someone who is independent. The scene becomes interesting when the practical part of them pushes in the opposite direction.

24. When they are overstimulated by a loud social scene: Use a two-step reaction: internal recalculation, then social choice. Their affectionate trait governs the recalculation; their expressive trait governs what other people actually get to see.

25. When they lose a competition by a tiny margin: The first visible tell should come from curious: a pause, look, posture shift, or too-precise question. The second beat comes from playful, which determines whether they approach, deflect, challenge, or wait.

26. When they win but the other person is genuinely upset: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let practical color the interpretation and observant color the response.

27. When a family member makes a decision they hate: Their instinct is to protect their self-image as someone who is stubborn. The scene becomes interesting when the affectionate part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their expressive trait governs the recalculation; their practical trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from perceptive: a pause, look, posture shift, or too-precise question. The second beat comes from expressive, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let playful color the interpretation and playful color the response.

M. Scene Seed Bank

- Give Amy a scene where being bright solves the practical problem but damages a relationship.
- Put Amy with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Amy did not know they had.
- Write a low-stakes competition where Amy's observant side becomes unexpectedly intense.
- Give Amy information that would help them win an argument but hurt someone if revealed.
- Force Amy to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Amy does in the three seconds after realizing it failed.
- Have another character misunderstand Amy's independent behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Amy without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Amy asks why or pretends not to care.
- Write a scene where Amy has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Amy to the single adjective 'bright'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: bright
02. Secondary trait: observant
03. Contradictory trait: independent
04. Social pressure trait: affectionate
05. Hidden-useful trait: curious
06. Wants to have room to grow without everyone pre-solving her life
07. Needs to be allowed to make age-appropriate mistakes
08. Core fear cluster: being left outside serious family conversations

09. Pressure point: being protected through omission
10. Role: Mako's biological little sister; domestic grounding
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: low-stakes competition
22. Likely comfort: winning fairly
23. Likely comfort: inside jokes that survive context changes
24. Likely comfort: unforced physical comfort
25. Likely comfort: private creative time
26. Likely friction: needless ambiguity
27. Likely friction: social tests nobody agreed to
28. Likely friction: jokes that require a real victim
29. Likely friction: being spoken for
30. Likely friction: being cornered into instant disclosure
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

09 Isaac

MAKO CLOSE CIRCLE

PRONOUNS	he/him
SPECIES / TYPE	digitigrade wolf-like nonhuman; exact species open
AGE	open
STORY ROLE	grounded reliable friend

Writing thesis: Isaac should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being steady and practical, wanting to be useful without becoming the default fixer, and needing to allow others to support him too.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Isaac is male.
- He is a digitigrade wolf-like nonhuman; exact species remains open.
- He is one of Mako's close friends.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between steady and practical. The silhouette should communicate how Isaac occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'steady' trait readable at rest and the 'practical' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: steady • practical • loyal • patient • physical • quietly funny • observant • dependable • adaptable • direct

WANTS	be useful without becoming the default fixer
NEEDS	allow others to support him too
FEARS	failing when someone counted on him
PRESSURE POINT	takes on workload before admitting strain

Internal tension	How to write it
Steady vs. Physical	Both are true. Do not pick one permanently. Under low pressure, steady can dominate; under relational or public pressure, physical may interrupt it, creating behavior that feels inconsistent only from the outside.
Practical vs. Quietly Funny	Both are true. Do not pick one permanently. Under low pressure, practical can dominate; under relational or public pressure, quietly funny may interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Observant	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.

Patient vs. Dependable	Both are true. Do not pick one permanently. Under low pressure, patient can dominate; under relational or public pressure, dependable may interrupt it, creating behavior that feels inconsistent only from the outside.
Physical vs. Adaptable	Both are true. Do not pick one permanently. Under low pressure, physical can dominate; under relational or public pressure, adaptable may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their steady side becomes less guarded; they spend less effort managing how they are read and allow patient behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The practical trait shapes what they notice; physical shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The patient side becomes more exacting, while observant determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing physical / dependable contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through dependable; their mistake risk is letting steady justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their adaptable trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their steady trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

49. 1. NOTICE - Isaac first filters a situation through steady: what detail feels immediately important?
50. 2. CLASSIFY - the practical side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
51. 3. PROTECT - before choosing an action, they protect a self-image connected to being loyal. This is where a flaw can hide inside a virtue.
52. 4. CHOOSE - they select the move most likely to help them be useful without becoming the default fixer. Under pressure, this short-term goal can conflict with what they actually need: allow others to support him too.
53. 5. REVISE - if another person reacts unexpectedly, the patient trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
54. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Isaac from a line with the name tag removed?
- Does the line reflect at least one of: steady, practical, loyal - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

MAKO CIRCLE

open

Isaac gives the ensemble a physically expressive, grounded presence whose species remains deliberately undesigned beyond “wolf-like,” leaving room for visual development without losing the core silhouette.

- Isaac is male.
- He is a digitigrade wolf-like nonhuman.
- His exact species is intentionally left unspecified.
- He is a recurring person in Mako's orbit.

Visual & Physical Direction

- Digitigrade legs are a locked structural cue.
- Wolf-like anatomy can include ears, muzzle, fur, and tail if consistent with future art, but avoid prematurely naming a species.
- Movement can be easy and balanced, with posture responding visibly to sound and social tension.
- Keep proportions practical for normal architecture in this world.

Personality Architecture

grounded, quietly social, reliable, good-humored, physically expressive, patient, protective of personal space, not easily impressed by chaos.

WANTS To maintain straightforward friendships that do not require constant drama.

NEEDS To say when he cares instead of assuming reliability communicates everything.

FEARS Being dragged into conflicts where loyalty is treated as automatic agreement.

PRESSURE POINT People demanding he “pick a side” before he has facts.

Voice & Dialogue Guide

- Plainspoken.
- Prefers concrete examples.

- Humor is situational.
- Will say “I don't know” rather than bluff.
- Can become firm when someone crowds him physically or socially.
- Avoid stereotyped canine speech gimmicks.

Competencies

Physical coordination • Reliability • Listening • Practical help • Boundary awareness • Staying calm in group noise

Weaknesses, Friction & Failure Modes

- Can appear detached
- May wait too long to volunteer an opinion
- Stubborn about personal space
- Can become terse under pressure
- Sometimes assumes “showing up” is enough repair
- Not eager to explain himself

Relationship Dynamics

- Mako: Recurring connection built on mutual respect and low-pressure company.
- Markov: Potential nonhuman-anatomy camaraderie without treating species as destiny.
- Joel: Joel can annoy him into visible reactions, which is useful comedy.
- Fear: Likely to respect direct communication and sensory/social boundaries without making them a special performance.

Arc Trajectory

- 1. Establish him as dependable but not automatically available.
- 2. Put him in a situation where neutrality itself becomes a choice.
- 3. Let him disagree with Mako without breaking friendship.
- 4. Use aftermath scenes to show that reliability includes emotional follow-through.
- 5. Long-term: become more verbally explicit about loyalty and limits.

Scene-Writing Guide

- A twitch of ears/posture can replace an unnecessary dialogue tag if design supports it.
- Do not use species as shorthand for personality.
- Let him exit chaotic rooms rather than endure them for comedy every time.
- Pair with Joel for contrast and Mako for quiet scenes.
- He works well in transitional scenes where someone needs a ride, help, or steady company.
- Avoid making him “the animal one.”

Continuity Redlines

- Exact species remains open.
- He is wolf-like and digitigrade.
- No supernatural wolf senses beyond normal setting expectations.
- Do not conflate him with Markov's Noctaruk species.

Story Hooks & Chapter Seeds

- Isaac is asked to take a side in a group dispute and refuses the framing.
- Joel creates a prank that accidentally violates Isaac's space, requiring an actual apology.
- Isaac quietly becomes the person who drives someone home after a terrible day.
- Mako asks for help and Isaac points out that this is unusually late.
- A design sketch labels Isaac with the wrong species and he simply crosses it out.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
being remembered accurately	jokes that require a real victim
quiet food/drink routines	social tests nobody agreed to
rooms where silence is allowed	carelessness with private information
inside jokes that survive context changes	unearned authority
winning fairly	being spoken for
repair after conflict	public humiliation
clever solutions	competence being mistaken for invulnerability
people who say what they mean	being cornered into instant disclosure

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?

- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of failing when someone counted on him can make normal steady behavior harden into a defense.
- Common mistake: using loyal as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Mako: close friend.

James/Fear/Zucchi/Blurb/Joel: shared circle.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Isaac, keep the central pressure tied to wanting to be useful without becoming the default fixer while actually needing to allow others to support him too.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Isaac, keep the central pressure tied to wanting to be useful without becoming the default fixer while actually needing to allow others to support him too.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Isaac, keep the central pressure tied to wanting to be useful without becoming the default fixer while actually needing to allow others to support him too.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Isaac, keep the central pressure tied to wanting to be useful without becoming the default fixer while actually needing to allow others to support him too.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Isaac, keep the central pressure tied to wanting to be useful without becoming the default fixer while actually needing to allow others to support him too.

Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Isaac, keep the central pressure tied to wanting to be useful without becoming the default fixer while actually needing to allow others to support him too.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Isaac, keep the central pressure tied to wanting to be useful without becoming the default fixer while actually needing to allow others to support him too.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from steady: a pause, look, posture shift, or too-precise question. The second beat comes from practical, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let practical color the interpretation and patient color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the quietly funny part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their dependable trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from physical: a pause, look, posture shift, or too-precise question. The second beat comes from direct, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let quietly funny color the interpretation and practical color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the patient part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their dependable trait governs the recalculation; their quietly funny trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from adaptable: a pause, look, posture shift, or too-precise question. The second beat comes from dependable, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let direct color the interpretation and direct color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is steady. The scene becomes interesting when the practical part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their practical trait governs the recalculation; their patient trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from quietly funny, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let patient color the interpretation and dependable color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is physical. The scene becomes interesting when the direct part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their quietly funny trait governs the recalculation; their practical trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from patient, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let dependable color the interpretation and quietly funny color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is adaptable. The scene becomes interesting when the dependable part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their direct trait governs the recalculation; their direct trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from steady: a pause, look, posture shift, or too-precise question. The second beat comes from practical, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let practical color the interpretation and patient color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the quietly funny part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their dependable trait governs what other people actually get to see.

- 25. When they lose a competition by a tiny margin:** The first visible tell should come from physical: a pause, look, posture shift, or too-precise question. The second beat comes from direct, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let quietly funny color the interpretation and practical color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the patient part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their dependable trait governs the recalculation; their quietly funny trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from adaptable: a pause, look, posture shift, or too-precise question. The second beat comes from dependable, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let direct color the interpretation and direct color the response.

M. Scene Seed Bank

- Give Isaac a scene where being steady solves the practical problem but damages a relationship.
- Put Isaac with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Isaac did not know they had.
- Write a low-stakes competition where Isaac's practical side becomes unexpectedly intense.
- Give Isaac information that would help them win an argument but hurt someone if revealed.
- Force Isaac to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Isaac does in the three seconds after realizing it failed.
- Have another character misunderstand Isaac's loyal behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Isaac without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Isaac asks why or pretends not to care.
- Write a scene where Isaac has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Isaac to the single adjective 'steady'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: steady
02. Secondary trait: practical
03. Contradictory trait: loyal
04. Social pressure trait: patient
05. Hidden-useful trait: physical
06. Wants to be useful without becoming the default fixer
07. Needs to allow others to support him too
08. Core fear cluster: failing when someone counted on him
09. Pressure point: takes on workload before admitting strain
10. Role: grounded reliable friend
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.

13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: being remembered accurately
22. Likely comfort: quiet food/drink routines
23. Likely comfort: rooms where silence is allowed
24. Likely comfort: inside jokes that survive context changes
25. Likely comfort: winning fairly
26. Likely friction: jokes that require a real victim
27. Likely friction: social tests nobody agreed to
28. Likely friction: carelessness with private information
29. Likely friction: unearned authority
30. Likely friction: being spoken for
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

10 Fear

MAKO CLOSE CIRCLE

PRONOUNS
SPECIES / TYPE
AGE
STORY ROLE

she/her
open
a bit younger than Mako
close friend; autistic character whose autism is one facet, not her entire plot

Writing thesis: Fear should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being direct and loyal, wanting to participate without being treated as fragile or symbolic, and needing to have preferences respected without others narrating them for her.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Fear is female and a bit younger than Mako.
- She is one of Mako's closest friends.
- She is autistic; this is one facet of her characterization and does not require different treatment, infantilization, or reduction to a diagnosis.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between direct and loyal. The silhouette should communicate how Fear occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'direct' trait readable at rest and the 'loyal' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: direct • loyal • perceptive • enthusiastic • particular • funny • focused • independent • emotionally sincere • stubborn

WANTS
NEEDS
FEARS
PRESSURE POINT

participate without being treated as fragile or symbolic
have preferences respected without others narrating them for her
being patronized or spoken around
social ambiguity and being underestimated

Internal tension	How to write it
Direct vs. Particular	Both are true. Do not pick one permanently. Under low pressure, direct can dominate; under relational or public pressure, particular may interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Funny	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, funny may interrupt it, creating behavior that feels inconsistent only from the outside.
Perceptive vs. Focused	Both are true. Do not pick one permanently. Under low pressure, perceptive can dominate; under relational or public pressure, focused may interrupt it, creating behavior that feels inconsistent only from the outside.

Enthusiastic vs. Independent	Both are true. Do not pick one permanently. Under low pressure, enthusiastic can dominate; under relational or public pressure, independent may interrupt it, creating behavior that feels inconsistent only from the outside.
Particular vs. Emotionally Sincere	Both are true. Do not pick one permanently. Under low pressure, particular can dominate; under relational or public pressure, emotionally sincere may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their direct side becomes less guarded; they spend less effort managing how they are read and allow enthusiastic behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The loyal trait shapes what they notice; particular shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The enthusiastic side becomes more exacting, while focused determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing particular / independent contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through independent; their mistake risk is letting direct justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their emotionally sincere trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their direct trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

55. 1. NOTICE - Fear first filters a situation through direct: what detail feels immediately important?
56. 2. CLASSIFY - the loyal side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
57. 3. PROTECT - before choosing an action, they protect a self-image connected to being perceptive. This is where a flaw can hide inside a virtue.
58. 4. CHOOSE - they select the move most likely to help them participate without being treated as fragile or symbolic. Under pressure, this short-term goal can conflict with what they actually need: have preferences respected without others narrating them for her.
59. 5. REVISE - if another person reacts unexpectedly, the enthusiastic trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
60. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Fear from a line with the name tag removed?
- Does the line reflect at least one of: direct, loyal, perceptive - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

MAKO CIRCLE

observational counterpoint

Fear is a close friend who happens to have minor autism; the autism informs her experience where relevant, but the character should never collapse into diagnosis-as-personality.

- Fear is female.
- She is a bit younger than Mako.
- She is one of Mako's closest friends.
- She has minor autism, and canon explicitly says she does not need to be treated differently because of it.

Visual & Physical Direction

- Specific design remains open.
- Avoid stereotypical "autism coding" through childish accessories or exaggerated visual cues.
- Give her a deliberate personal style unrelated to diagnosis.
- If sensory preferences matter in a scene, show them as individual preferences rather than universal autism rules.

Personality Architecture

direct, loyal, self-aware, observant, capable of intense enthusiasm, values clarity, does not enjoy being patronized, dryly funny, emotionally honest when trust is established.

WANTS To be treated as a full friend whose preferences matter

without becoming the group's special handling case.

NEEDS To state limits before frustration accumulates.

FEARS Being discussed instead of included in decisions that affect her.

PRESSURE POINT People changing their voice or behavior toward her after learning she is autistic.

Voice & Dialogue Guide

- Clear and specific.
- Can ask for clarification without apology.
- Does not need stilted or robotic dialogue.

- Humor may be unexpectedly literal or sharply observational, but not as a stereotype.
- Will correct assumptions about what she needs.
- Strong preference for people saying what they mean.

Competencies

Clarity • Detail focus • Calling out mixed messages • Loyalty • Recognizing patterns in group behavior • Sustained interest when something matters to her

Weaknesses, Friction & Failure Modes

- Can become frustrated by vague social maneuvering
- May push for clarity when others need time
- Does not tolerate patronizing behavior well
- Can lock onto a disputed detail
- May withdraw from overwhelming group energy
- Sometimes assumes directness will be received as intended

Relationship Dynamics

- Mako: Close friend; his restrained directness can work well with her, but he should not decide what she can handle for her.
- Zucchi: Potentially strong creative/social pairing.
- Joel: His goofball energy can be fun when consensual and exhausting when relentless; that variability makes their scenes useful.
- James: Steadier close-circle bond where clarity can replace social performance.
- Scarf: Scarf must learn that smoothing things over is not always more respectful than leaving a blunt truth intact.

Arc Trajectory

- 1. Introduce her as a friend first.
- 2. Let the audience see what makes her funny, loyal, irritated, and specific.
- 3. Use one scene where someone overaccommodates her and gets corrected.
- 4. After Ivan, allow sensory or routine disruption to matter if relevant without making it her only reaction.
- 5. Long-term: build confidence in asking directly for what she needs while the group gets better at simply listening.

Scene-Writing Guide

- Do not explain autism every time she appears.
- Let her have hobbies, jokes, grudges, and preferences unrelated to it.
- If she needs quiet, let it be a normal request.
- Give her agency in high-stakes scenes.
- Avoid “savant” shortcuts.
- Mako should treat her as the same close friend he always has.

Continuity Redlines

- Minor autism is canon, but “treated differently” is explicitly not the goal.
- No infantilization.
- No robotic dialogue stereotype.
- Do not make every conflict about autism.

Story Hooks & Chapter Seeds

- Fear calls out a group plan that everyone else is pretending is clear.
- Someone starts overexplaining something and she asks why they are suddenly talking to her differently.
- Joel successfully lands a joke because he remembered a boundary instead of ignoring it.
- Fear spots a timeline inconsistency because she remembers exact wording.
- She chooses to leave an overstimulating gathering and returns later on her own terms.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
low-stakes competition	carelessness with private information
rooms where silence is allowed	public humiliation
private creative time	competence being mistaken for invulnerability
inside jokes that survive context changes	social tests nobody agreed to
objects with personal history	consequences being treated as temporary
people who say what they mean	fake apologies
repair after conflict	having motives assigned to them
clever solutions	people treating boundaries as challenges

- What object do they always know the location of?

- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of being patronized or spoken around can make normal direct behavior harden into a defense.
- Common mistake: using perceptive as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Mako: one of closest friends.

- shared circle with James/Zucchi/Blurb/Joel/Isaac
- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Fear, keep the central pressure tied to wanting to participate without being treated as fragile or symbolic while actually needing to have preferences respected without others narrating them for her.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Fear, keep the central pressure tied to wanting to participate without being treated as fragile or symbolic while actually needing to have preferences respected without others narrating them for her.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Fear, keep the central pressure tied to wanting to participate without being treated as fragile or symbolic while actually needing to have preferences respected without others narrating them for her.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Fear, keep the central pressure tied to wanting to participate without being treated as fragile or symbolic while actually needing to have preferences respected without others narrating them for her.

Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Fear, keep the central pressure tied to wanting to participate without being treated as fragile or symbolic while actually needing to have preferences respected without others narrating them for her.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Fear, keep the central pressure tied to wanting to participate without being treated as fragile or symbolic while actually needing to have preferences respected without others narrating them for her.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Fear, keep the central pressure tied to wanting to participate without being treated as fragile or symbolic while actually needing to have preferences respected without others narrating them for her.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from direct: a pause, look, posture shift, or too-precise question. The second beat comes from loyal, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let loyal color the interpretation and enthusiastic color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is perceptive. The scene becomes interesting when the funny part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their enthusiastic trait governs the recalculation; their independent trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from particular: a pause, look, posture shift, or too-precise question. The second beat comes from stubborn, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let funny color the interpretation and loyal color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is focused. The scene becomes interesting when the enthusiastic part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their independent trait governs the recalculation; their funny trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from emotionally sincere: a pause, look, posture shift, or too-precise question. The second beat comes from independent, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let stubborn color the interpretation and stubborn color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is direct. The scene becomes interesting when the loyal part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their loyal trait governs the recalculation; their enthusiastic trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from perceptive: a pause, look, posture shift, or too-precise question. The second beat comes from funny, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let enthusiastic color the interpretation and independent color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is particular. The scene becomes interesting when the stubborn part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their funny trait governs the recalculation; their loyal trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from focused: a pause, look, posture shift, or too-precise question. The second beat comes from enthusiastic, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let independent color the interpretation and funny color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is emotionally sincere. The scene becomes interesting when the independent part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their stubborn trait governs the recalculation; their stubborn trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from direct: a pause, look, posture shift, or too-precise question. The second beat comes from loyal, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let loyal color the interpretation and enthusiastic color the response.

- 23. When they are bored:** Their instinct is to protect their self-image as someone who is perceptive. The scene becomes interesting when the funny part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their enthusiastic trait governs the recalculation; their independent trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from particular: a pause, look, posture shift, or too-precise question. The second beat comes from stubborn, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let funny color the interpretation and loyal color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is focused. The scene becomes interesting when the enthusiastic part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their independent trait governs the recalculation; their funny trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from emotionally sincere: a pause, look, posture shift, or too-precise question. The second beat comes from independent, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let stubborn color the interpretation and stubborn color the response.

M. Scene Seed Bank

- Give Fear a scene where being direct solves the practical problem but damages a relationship.
- Put Fear with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Fear did not know they had.
- Write a low-stakes competition where Fear's loyal side becomes unexpectedly intense.
- Give Fear information that would help them win an argument but hurt someone if revealed.
- Force Fear to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Fear does in the three seconds after realizing it failed.
- Have another character misunderstand Fear's perceptive behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Fear without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Fear asks why or pretends not to care.
- Write a scene where Fear has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Fear to the single adjective 'direct'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.
- Do not infantilize her, treat autism as a superpower, or make every preference/sentence about autism.

O. 50-Point Quick Reference

01. Primary trait: direct
02. Secondary trait: loyal
03. Contradictory trait: perceptive
04. Social pressure trait: enthusiastic
05. Hidden-useful trait: particular
06. Wants to participate without being treated as fragile or symbolic
07. Needs to have preferences respected without others narrating them for her

08. Core fear cluster: being patronized or spoken around
09. Pressure point: social ambiguity and being underestimated
10. Role: close friend; autistic character whose autism is one facet, not her entire plot
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: low-stakes competition
22. Likely comfort: rooms where silence is allowed
23. Likely comfort: private creative time
24. Likely comfort: inside jokes that survive context changes
25. Likely comfort: objects with personal history
26. Likely friction: carelessness with private information
27. Likely friction: public humiliation
28. Likely friction: competence being mistaken for invulnerability
29. Likely friction: social tests nobody agreed to
30. Likely friction: consequences being treated as temporary
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

11 Zucchi

MAKO CLOSE CIRCLE

PRONOUNS	she/her
SPECIES / TYPE	open
AGE	same age as Mako
STORY ROLE	artist friend; visual observer of the group

Writing thesis: Zucchi should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being creative and attentive, wanting to make things that feel like hers rather than merely useful, and needing to risk showing unfinished work and imperfect feelings.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Zucchi is female and the same age as Mako.
- She is one of Mako's closest friends.
- She loves to draw.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between creative and attentive. The silhouette should communicate how Zucchi occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'creative' trait readable at rest and the 'attentive' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: creative • attentive • playful • patient • expressive • curious • loyal • imaginative • quietly competitive • detail-oriented

WANTS	make things that feel like hers rather than merely useful
NEEDS	risk showing unfinished work and imperfect feelings
FEARS	creative dismissal or being treated as decorative
PRESSURE POINT	criticism can land harder than she lets on

Internal tension	How to write it
Creative vs. Expressive	Both are true. Do not pick one permanently. Under low pressure, creative can dominate; under relational or public pressure, expressive may interrupt it, creating behavior that feels inconsistent only from the outside.
Attentive vs. Curious	Both are true. Do not pick one permanently. Under low pressure, attentive can dominate; under relational or public pressure, curious may interrupt it, creating behavior that feels inconsistent only from the outside.
Playful vs. Loyal	Both are true. Do not pick one permanently. Under low pressure, playful can dominate; under relational or public pressure, loyal may interrupt it, creating behavior that feels inconsistent only from the outside.
Patient vs. Imaginative	Both are true. Do not pick one permanently. Under low pressure, patient

	can dominate; under relational or public pressure, imaginative may interrupt it, creating behavior that feels inconsistent only from the outside.
Expressive vs. Quietly Competitive	Both are true. Do not pick one permanently. Under low pressure, expressive can dominate; under relational or public pressure, quietly competitive may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their creative side becomes less guarded; they spend less effort managing how they are read and allow patient behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The attentive trait shapes what they notice; expressive shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The patient side becomes more exacting, while loyal determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing expressive / imaginative contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through imaginative; their mistake risk is letting creative justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their quietly competitive trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their creative trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

61. 1. NOTICE - Zucchi first filters a situation through creative: what detail feels immediately important?
62. 2. CLASSIFY - the attentive side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
63. 3. PROTECT - before choosing an action, they protect a self-image connected to being playful. This is where a flaw can hide inside a virtue.
64. 4. CHOOSE - they select the move most likely to help them make things that feel like hers rather than merely useful. Under pressure, this short-term goal can conflict with what they actually need: risk showing unfinished work and imperfect feelings.
65. 5. REVISE - if another person reacts unexpectedly, the patient trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
66. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Zucchi from a line with the name tag removed?
- Does the line reflect at least one of: creative, attentive, playful - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

MAKO CIRCLE

Zucchi sees people twice: once while living beside them and again while translating them into lines, shapes, and choices on a page.

- Zucchi is female.
- She is the same age as Mako.
- She is one of Mako's closest friends.
- She loves to draw.

Visual & Physical Direction

- Carry drawing materials or an art-related phone/tablet habit only when natural; do not glue a sketchbook to her hand in every scene.
- Specific species/design remains open.
- Hands can be expressive and often occupied with small mark-making, doodling, or visual thinking.
- Clothing can show accidental marks, pins, or personal customization if desired.

Personality Architecture

creative, observant, warm, opinionated about aesthetics, patient when focused, playful, good at noticing body language, protective of creative privacy, curious.

WANTS To make things that capture people honestly rather than flatteringly.

NEEDS To ask before turning private moments into shared art or jokes.

FEARS Losing creative trust with someone she cares about.

PRESSURE POINT People dismissing art as decoration when she uses it to process experience.

Voice & Dialogue Guide

- Uses visual comparisons naturally.
- Can become very specific about shapes, color, composition, or posture.
- Teases through sketches as much as words.
- When hurt, may go quiet and draw instead of explaining immediately.
- Can talk at length about art with Mako.
- Avoid making every sentence an art metaphor.

Competencies

Drawing • Visual memory • Reading posture • Composition/aesthetic judgment • Patient observation • Turning group moments into artifacts

Weaknesses, Friction & Failure Modes

- Can observe instead of participate
- May sketch something too personal
- Perfectionistic about work she cares about
- Can become absorbed and miss conversation
- Sensitive to careless criticism
- May communicate indirectly through art when a direct conversation is needed

Relationship Dynamics

- Mako: Close friend with natural overlap in artistic attention.
- Fear: Potential creative/social bond grounded in honesty.
- Joel: Excellent subject for chaotic sketches; Joel may actively perform for the sketchbook.
- Naki: Naki may notice what she chooses not to draw.
- Blade: Prank-war drawings can become evidence, propaganda, or affectionate mockery.

Arc Trajectory

- 1. Use her art to reveal how she perceives the ensemble.
- 2. Create a boundary conflict around a private sketch or captured moment.
- 3. Let art become a method of processing the Ivan aftermath without replacing conversation.
- 4. During court prep, visual memory may help reconstruct space while still being imperfect evidence.
- 5. Long-term: learn when to share a drawing, when to ask, and when to keep it private.

Scene-Writing Guide

- Describe what she notices, not just that she is drawing.
- Let unfinished sketches matter.
- Avoid making her magically photographic.
- Give her bad drawings, abandoned ideas, and jokes.
- Use art as a relationship object: gifts, crossed-out pages, margins, visual in-jokes.
- Her friendship with Mako should exist beyond art.

Continuity Redlines

- She loves to draw.
- Same age as Mako.
- Do not make visual memory infallible.
- Do not reduce her to “the artist friend.”

Story Hooks & Chapter Seeds

- Zucchi accidentally draws Naki and Blade with unmistakably intimate body language before they are dating.
- A court-prep sketch of a room exposes a memory disagreement.
- She refuses to show a drawing because it belongs to the moment, not the group.
- Mako quietly keeps one of her roughest sketches.
- Joel commissions an absurd heroic portrait and takes the pose far too seriously.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
competence without showboating	performative concern
being given useful context	people treating boundaries as challenges
being remembered accurately	being spoken for
objects with personal history	needless ambiguity
unforced physical comfort	fake apologies
repair after conflict	public humiliation
rooms where silence is allowed	consequences being treated as temporary
people who say what they mean	having motives assigned to them

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?

- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of creative dismissal or being treated as decorative can make normal creative behavior harden into a defense.
- Common mistake: using playful as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Mako: close friend.

- shared circle
- art is a recurring personal interest
- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Zucchini, keep the central pressure tied to wanting to make things that feel like hers rather than merely useful while actually needing to risk showing unfinished work and imperfect feelings.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Zucchini, keep the central pressure tied to wanting to make things that feel like hers rather than merely useful while actually needing to risk showing unfinished work and imperfect feelings.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Zucchini, keep the central pressure tied to wanting to make things that feel like hers rather than merely useful while actually needing to risk showing unfinished work and imperfect feelings.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Zucchini, keep the central pressure tied to wanting to make things that feel like hers rather than merely useful while actually needing to risk showing unfinished work and imperfect feelings.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Zucchini, keep the central pressure tied to wanting to make things that feel like hers rather than merely useful while actually needing to risk showing unfinished work and imperfect feelings.
Behavioral proof	Growth is shown through a new action under pressure, not a speech

	claiming they changed. For Zucchi, keep the central pressure tied to wanting to make things that feel like hers rather than merely useful while actually needing to risk showing unfinished work and imperfect feelings.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Zucchi, keep the central pressure tied to wanting to make things that feel like hers rather than merely useful while actually needing to risk showing unfinished work and imperfect feelings.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from attentive, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let attentive color the interpretation and patient color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is playful. The scene becomes interesting when the curious part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their imaginative trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from expressive: a pause, look, posture shift, or too-precise question. The second beat comes from detail-oriented, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let curious color the interpretation and attentive color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the patient part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their imaginative trait governs the recalculation; their curious trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from quietly competitive: a pause, look, posture shift, or too-precise question. The second beat comes from imaginative, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let detail-oriented color the interpretation and detail-oriented color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is creative. The scene becomes interesting when the attentive part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their attentive trait governs the recalculation; their patient trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from playful: a pause, look, posture shift, or too-precise question. The second beat comes from curious, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let patient color the interpretation and imaginative color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is expressive. The scene becomes interesting when the detail-oriented part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their curious trait governs the recalculation; their attentive trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from patient, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let imaginative color the interpretation and curious color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is quietly competitive. The scene becomes interesting when the imaginative part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their detail-oriented trait governs the recalculation; their detail-oriented trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from attentive, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let attentive color the interpretation and patient color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is playful. The scene becomes interesting when the curious part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their imaginative trait governs what other people actually get to see.

25. When they lose a competition by a tiny margin: The first visible tell should come from expressive: a pause, look, posture shift, or too-precise question. The second beat comes from detail-oriented, which determines whether they approach, deflect, challenge, or wait.

26. When they win but the other person is genuinely upset: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let curious color the interpretation and attentive color the response.

27. When a family member makes a decision they hate: Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the patient part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their imaginative trait governs the recalculation; their curious trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from quietly competitive: a pause, look, posture shift, or too-precise question. The second beat comes from imaginative, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let detail-oriented color the interpretation and detail-oriented color the response.

M. Scene Seed Bank

- Give Zucchi a scene where being creative solves the practical problem but damages a relationship.
- Put Zucchi with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Zucchi did not know they had.
- Write a low-stakes competition where Zucchi's attentive side becomes unexpectedly intense.
- Give Zucchi information that would help them win an argument but hurt someone if revealed.
- Force Zucchi to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Zucchi does in the three seconds after realizing it failed.
- Have another character misunderstand Zucchi's playful behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Zucchi without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Zucchi asks why or pretends not to care.
- Write a scene where Zucchi has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Zucchi to the single adjective 'creative'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: creative
02. Secondary trait: attentive
03. Contradictory trait: playful
04. Social pressure trait: patient
05. Hidden-useful trait: expressive
06. Wants to make things that feel like hers rather than merely useful
07. Needs to risk showing unfinished work and imperfect feelings
08. Core fear cluster: creative dismissal or being treated as decorative
09. Pressure point: criticism can land harder than she lets on
10. Role: artist friend; visual observer of the group
11. Affection should be specific rather than generic.

12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: competence without showboating
22. Likely comfort: being given useful context
23. Likely comfort: being remembered accurately
24. Likely comfort: objects with personal history
25. Likely comfort: unforced physical comfort
26. Likely friction: performative concern
27. Likely friction: people treating boundaries as challenges
28. Likely friction: being spoken for
29. Likely friction: needless ambiguity
30. Likely friction: fake apologies
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

12 Blurb

MAKO FAMILY / CLOSE CIRCLE

PRONOUNS

he/him

SPECIES / TYPE

open

AGE

same age as Mako

STORY ROLE

Mako's cousin; family familiarity inside friend group

Writing thesis: Blurb should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being familiar and teasing, wanting to keep family closeness from becoming entitlement, and needing to respect changed boundaries even when history is long.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Blurb is male and the same age as Mako.
- He is Mako's cousin.
- He is one of Mako's recurring close people/friends.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between familiar and teasing. The silhouette should communicate how Blurb occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'familiar' trait readable at rest and the 'teasing' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: familiar • teasing • loyal • casual • observant • stubborn • protective • funny • blunt • adaptable

WANTS

keep family closeness from becoming entitlement

NEEDS

respect changed boundaries even when history is long

FEARS

family distance that nobody names

PRESSURE POINT

assumes shorthand where a direct conversation is needed

Internal tension	How to write it
Familiar vs. Observant	Both are true. Do not pick one permanently. Under low pressure, familiar can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.
Teasing vs. Stubborn	Both are true. Do not pick one permanently. Under low pressure, teasing can dominate; under relational or public pressure, stubborn may interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Protective	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, protective may interrupt it, creating behavior that feels inconsistent only from the outside.

Casual vs. Funny	Both are true. Do not pick one permanently. Under low pressure, casual can dominate; under relational or public pressure, funny may interrupt it, creating behavior that feels inconsistent only from the outside.
Observant vs. Blunt	Both are true. Do not pick one permanently. Under low pressure, observant can dominate; under relational or public pressure, blunt may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their familiar side becomes less guarded; they spend less effort managing how they are read and allow casual behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The teasing trait shapes what they notice; observant shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The casual side becomes more exacting, while protective determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing observant / funny contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through funny; their mistake risk is letting familiar justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their blunt trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their familiar trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

67. 1. NOTICE - Blurb first filters a situation through familiar: what detail feels immediately important?
68. 2. CLASSIFY - the teasing side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
69. 3. PROTECT - before choosing an action, they protect a self-image connected to being loyal. This is where a flaw can hide inside a virtue.
70. 4. CHOOSE - they select the move most likely to help them keep family closeness from becoming entitlement. Under pressure, this short-term goal can conflict with what they actually need: respect changed boundaries even when history is long.
71. 5. REVISE - if another person reacts unexpectedly, the casual trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
72. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Blurb from a line with the name tag removed?
- Does the line reflect at least one of: familiar, teasing, loyal - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

MAKO CIRCLE

Blurb brings family familiarity without living in Mako's household, which lets him know exactly where the pressure points are while still seeing the household from one step outside.

- Blurb is male.
- He is the same age as Mako.
- He is Mako's cousin.
- He is one of Mako's recurring close people.

Visual & Physical Direction

- Specific design remains open.
- A family resemblance to Mako is optional, not required; cousin relationships do not need identical species or features unless later canon says so.
- Give him one strong silhouette cue unrelated to Mako to avoid “smaller Mako” design.

Personality Architecture

familiar, slyly funny, loyal, family-aware, socially comfortable, capable of pushing buttons, protective, good at remembering embarrassing history.

WANTS To keep family closeness from turning into a role where everyone expects him to take Mako's side automatically.

NEEDS To distinguish playful button-pushing from ignoring real stress.

FEARS Family conflict becoming permanent because everyone assumes family will “just get over it.”

PRESSURE POINT Being used as a messenger instead of someone speaking directly to Mako.

Voice & Dialogue Guide

- Casual with Mako.
- Comfortable referencing family history without exposition dumps.
- Can tease in ways friends would not risk.
- Gets more serious when outsiders criticize family unfairly.
- Will refuse being made a go-between.

- Humor can be a little sharper than James's.

Competencies

Family context • Social flexibility • Defusing tension with familiarity • Knowing Mako's old habits • Standing up for relatives • Calling out family avoidance

Weaknesses, Friction & Failure Modes

- Can push jokes too far
- May assume family access equals permission
- Sometimes takes sides too quickly
- Can keep old grievances alive as jokes
- Dislikes being excluded from family information
- May confuse loyalty with intervention

Relationship Dynamics

- Mako: Cousin and close recurring person. Their bond should have a different texture from friendship: inherited history, family events, old stories.
- Markov: Family relationship should affirm Markov as fully part of the family.
- Amy: Another cousin relationship with room for teasing and alliance-building.
- Joel: Potential high-energy co-conspirator.
- James: Both know Mako well, but from different kinds of history.

Arc Trajectory

- 1. Establish cousin familiarity in ordinary scenes.
- 2. Let Blurb overstep once because he assumes family privilege.
- 3. Use a family disagreement to force more direct boundaries.
- 4. After Ivan, Blurb must decide whether “keeping everyone together” is actually helpful.
- 5. Long-term: become a family connection who supports without triangulating.

Scene-Writing Guide

- Let him walk into Mako's house like someone who has been there before.
- Use family references sparingly but effectively.
- Do not force shared species/design.
- Let Markov and Amy have independent relationships with him.
- He works well in scenes where outsiders misunderstand the household.
- Give him motives unrelated to Mako too.

Continuity Redlines

- Blurb is Mako's cousin.
- Same age as Mako.
- Do not turn cousinhood into siblinghood.
- Do not imply Markov is outside the family.

Story Hooks & Chapter Seeds

- Blurb tells a family story that accidentally reveals Mako has always handled fear by getting organized.
- Mako tells Blurb to stop carrying messages between relatives.
- Blurb and Amy coordinate against an overprotective plan.
- A prank relies on family knowledge only Blurb has.
- Blurb is forced to choose between defending Mako and telling him he is wrong.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
rooms where silence is allowed	unearned authority
quiet food/drink routines	carelessness with private information
specific compliments	social tests nobody agreed to
repair after conflict	competence being mistaken for invulnerability
objects with personal history	people treating boundaries as challenges
unforced physical comfort	fake apologies
private creative time	needless ambiguity
clever solutions	being reduced to one trait

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?

- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of family distance that nobody names can make normal familiar behavior harden into a defense.
- Common mistake: using loyal as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Mako: cousin.

James/Fear/Zucchi/Joel/Isaac: friend circle.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Blurb, keep the central pressure tied to wanting to keep family closeness from becoming entitlement while actually needing to respect changed boundaries even when history is long.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Blurb, keep the central pressure tied to wanting to keep family closeness from becoming entitlement while actually needing to respect changed boundaries even when history is long.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Blurb, keep the central pressure tied to wanting to keep family closeness from becoming entitlement while actually needing to respect changed boundaries even when history is long.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Blurb, keep the central pressure tied to wanting to keep family closeness from becoming entitlement while actually needing to respect changed boundaries even when history is long.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Blurb, keep the central pressure tied to wanting to keep family closeness from becoming entitlement while actually needing to respect changed

Behavioral proof	boundaries even when history is long. Growth is shown through a new action under pressure, not a speech claiming they changed. For Blurb, keep the central pressure tied to wanting to keep family closeness from becoming entitlement while actually needing to respect changed boundaries even when history is long.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Blurb, keep the central pressure tied to wanting to keep family closeness from becoming entitlement while actually needing to respect changed boundaries even when history is long.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from familiar: a pause, look, posture shift, or too-precise question. The second beat comes from teasing, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let teasing color the interpretation and casual color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the stubborn part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their casual trait governs the recalculation; their funny trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from adaptable, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let stubborn color the interpretation and teasing color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is protective. The scene becomes interesting when the casual part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their funny trait governs the recalculation; their stubborn trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from blunt: a pause, look, posture shift, or too-precise question. The second beat comes from funny, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptable color the interpretation and adaptable color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is familiar. The scene becomes interesting when the teasing part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their teasing trait governs the recalculation; their casual trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from stubborn, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let casual color the interpretation and funny color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the adaptable part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their stubborn trait governs the recalculation; their teasing trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from casual, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let funny color the interpretation and stubborn color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is blunt. The scene becomes interesting when the funny part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their adaptable trait governs the recalculation; their adaptable trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from familiar: a pause, look, posture shift, or too-precise question. The second beat comes from teasing, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let teasing color the interpretation and casual color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the stubborn part of them pushes in the opposite direction.

- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their casual trait governs the recalculation; their funny trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from adaptable, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let stubborn color the interpretation and teasing color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is protective. The scene becomes interesting when the casual part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their funny trait governs the recalculation; their stubborn trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from blunt: a pause, look, posture shift, or too-precise question. The second beat comes from funny, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptable color the interpretation and adaptable color the response.

M. Scene Seed Bank

- Give Blurb a scene where being familiar solves the practical problem but damages a relationship.
- Put Blurb with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Blurb did not know they had.
- Write a low-stakes competition where Blurb's teasing side becomes unexpectedly intense.
- Give Blurb information that would help them win an argument but hurt someone if revealed.
- Force Blurb to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Blurb does in the three seconds after realizing it failed.
- Have another character misunderstand Blurb's loyal behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Blurb without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Blurb asks why or pretends not to care.
- Write a scene where Blurb has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Blurb to the single adjective 'familiar'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: familiar
02. Secondary trait: teasing
03. Contradictory trait: loyal
04. Social pressure trait: casual
05. Hidden-useful trait: observant
06. Wants to keep family closeness from becoming entitlement
07. Needs to respect changed boundaries even when history is long
08. Core fear cluster: family distance that nobody names
09. Pressure point: assumes shorthand where a direct conversation is needed
10. Role: Mako's cousin; family familiarity inside friend group

11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: rooms where silence is allowed
22. Likely comfort: quiet food/drink routines
23. Likely comfort: specific compliments
24. Likely comfort: repair after conflict
25. Likely comfort: objects with personal history
26. Likely friction: unearned authority
27. Likely friction: carelessness with private information
28. Likely friction: social tests nobody agreed to
29. Likely friction: competence being mistaken for invulnerability
30. Likely friction: people treating boundaries as challenges
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

13 Joel

MAKO CLOSE CIRCLE

PRONOUNS	he/him
SPECIES / TYPE	open
AGE	one year younger than Mako
STORY ROLE	Mako's OG/oldest close friend; goofball energy

Writing thesis: Joel should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being goofy and fast, wanting to keep old friendship alive and fun, and needing to learn when the joke needs to stop before someone else has to stop it.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Joel is male and one year younger than Mako.
- He is one of Mako's closest friends and the original/oldest close friend ('the OG').
- He absolutely loves being a goofball.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between goofy and fast. The silhouette should communicate how Joel occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'goofy' trait readable at rest and the 'fast' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: goofy • fast • loyal • improvisational • affectionate • reckless • observant beneath humor • energetic • creative • stubborn

WANTS	keep old friendship alive and fun
NEEDS	learn when the joke needs to stop before someone else has to stop it
FEARS	growing apart or becoming the friend everyone outgrows
PRESSURE POINT	seriousness can feel like loss of identity

Internal tension	How to write it
Goofy vs. Affectionate	Both are true. Do not pick one permanently. Under low pressure, goofy can dominate; under relational or public pressure, affectionate may interrupt it, creating behavior that feels inconsistent only from the outside.
Fast vs. Reckless	Both are true. Do not pick one permanently. Under low pressure, fast can dominate; under relational or public pressure, reckless may interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Observant Beneath Humor	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, observant beneath humor may interrupt it, creating behavior that feels inconsistent only from the outside.

Improvisational vs. Energetic	Both are true. Do not pick one permanently. Under low pressure, improvisational can dominate; under relational or public pressure, energetic may interrupt it, creating behavior that feels inconsistent only from the outside.
Affectionate vs. Creative	Both are true. Do not pick one permanently. Under low pressure, affectionate can dominate; under relational or public pressure, creative may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their goofy side becomes less guarded; they spend less effort managing how they are read and allow improvisational behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The fast trait shapes what they notice; affectionate shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The improvisational side becomes more exacting, while observant beneath humor determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing affectionate / energetic contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through energetic; their mistake risk is letting goofy justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their creative trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their goofy trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

73. 1. NOTICE - Joel first filters a situation through goofy: what detail feels immediately important?
74. 2. CLASSIFY - the fast side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
75. 3. PROTECT - before choosing an action, they protect a self-image connected to being loyal. This is where a flaw can hide inside a virtue.
76. 4. CHOOSE - they select the move most likely to help them keep old friendship alive and fun. Under pressure, this short-term goal can conflict with what they actually need: learn when the joke needs to stop before someone else has to stop it.
77. 5. REVISE - if another person reacts unexpectedly, the improvisational trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
78. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Joel from a line with the name tag removed?
- Does the line reflect at least one of: goofy, fast, loyal - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

MAKO CIRCLE

Joel is the friend who has earned the right to be ridiculous in Mako's space - which means the rare moment he stops joking can instantly change the temperature of a chapter.

- Joel is male.
- He is one year younger than Mako.
- He is one of Mako's closest friends and his original/oldest close friend - "the OG."
- He absolutely loves being a goofball.

Visual & Physical Direction

- Specific design remains open; choose readable expressive features that support physical comedy.
- Props can appear as part of individual bits, but he should not need a permanent joke costume.
- Movement should be bigger and less controlled than Mako's.
- When he becomes serious, reducing motion is a strong contrast.

Personality Architecture

goofy, affectionate, fearless about looking stupid, loyal, socially energetic, inventive, persistent, better at reading Mako than his behavior suggests, occasionally reckless.

WANTS To keep the oldest friendship alive by making sure life never becomes only crisis management.

NEEDS To understand that levity can support people without overriding their boundaries.

FEARS That trauma or responsibility will turn Mako into someone unreachable.

PRESSURE POINT A room where nobody is laughing because they are afraid to say why.

Voice & Dialogue Guide

- Fast, playful, willing to commit to nonsense.
- Uses callbacks and running jokes.
- Can mimic exaggerated seriousness for comedic effect.

- When sincere, strips away almost all performance.
- May be one of the few people comfortable interrupting Mako mid-analysis.
- Avoid random = funny; his humor should have intent and relationship context.

Competencies

Improvise comedy • Long-term friendship knowledge • Breaking tension • Prank energy • Commitment to a bit • Getting Mako to visibly react

Weaknesses, Friction & Failure Modes

- Can overcommit to a joke
- May misjudge boundaries
- Hates letting a bad mood simply exist
- Can become reckless in pursuit of fun
- Sometimes uses humor to dodge his own fear
- May assume history grants forgiveness

Relationship Dynamics

- Mako: The OG friendship. Joel can irritate, reassure, and confront Mako using history no newer friend can replicate.
- James: Both close to Mako, but Joel is more kinetic while James is steadier.
- Zucchi: Natural comedy/art pairing; he will absolutely pose.
- Fear: Good dynamic when Joel respects a clear boundary; bad dynamic if he treats boundaries as challenges.
- Scarf: Potential chaos duo.
- Raine: Prank-war chemistry could become catastrophic in the best narrative sense.

Arc Trajectory

- 1. Establish genuinely funny friendship before using seriousness as contrast.
- 2. Let one joke cross a line and require repair.
- 3. During the prank war, make him a major energy source without letting him own every prank.
- 4. After Ivan, show that humor is a coping tool, not a reset button.
- 5. Long-term: learn to ask “do you want funny or do you want me here?” without losing spontaneity.

Scene-Writing Guide

- Give him specific bits, not generic wackiness.
- A single serious line from Joel should carry weight.
- Let Mako anticipate some jokes and still fail to stop them.
- Use callbacks as proof of history.
- Give Joel scenes where he is the one who needs support.
- Physical comedy should respect character anatomy and environment.

Continuity Redlines

- One year younger than Mako.
- Mako's OG/oldest close friend.
- Goofball is central, but not his only emotional mode.
- Do not use jokes to trivialize the Ivan incident.

Story Hooks & Chapter Seeds

- Joel brings back the first joke he ever used to make Mako laugh, but only after asking if Mako wants it.
- A prank with Raine becomes too ambitious and forces Joel to be the responsible one.
- Joel sits silently beside Mako after court because there is finally no useful joke.
- Zucchi catches him practicing an absurd pose in private.
- Joel admits he is scared the group will never feel normal again.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
specific compliments	people treating boundaries as challenges
competence without showboating	being cornered into instant disclosure
people who say what they mean	needless ambiguity
being remembered accurately	being spoken for
objects with personal history	social tests nobody agreed to
inside jokes that survive context changes	fake apologies
rooms where silence is allowed	public humiliation
quiet food/drink routines	jokes that require a real victim

- What object do they always know the location of?

- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of growing apart or becoming the friend everyone outgrows can make normal goofy behavior harden into a defense.
- Common mistake: using loyal as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Mako: original/oldest close friend.

- wider close circle
- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Joel, keep the central pressure tied to wanting to keep old friendship alive and fun while actually needing to learn when the joke needs to stop before someone else has to stop it.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Joel, keep the central pressure tied to wanting to keep old friendship alive and fun while actually needing to learn when the joke needs to stop before someone else has to stop it.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Joel, keep the central pressure tied to wanting to keep old friendship alive and fun while actually needing to learn when the joke needs to stop before someone else has to stop it.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Joel, keep the central pressure tied to wanting to keep old friendship alive and fun while actually needing to learn when the joke needs to stop before someone else has to stop it.
Choice point	Force a decision where protecting the old self-image conflicts with

	protecting the relationship or value they actually care about. For Joel, keep the central pressure tied to wanting to keep old friendship alive and fun while actually needing to learn when the joke needs to stop before someone else has to stop it.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Joel, keep the central pressure tied to wanting to keep old friendship alive and fun while actually needing to learn when the joke needs to stop before someone else has to stop it.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Joel, keep the central pressure tied to wanting to keep old friendship alive and fun while actually needing to learn when the joke needs to stop before someone else has to stop it.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from goofy: a pause, look, posture shift, or too-precise question. The second beat comes from fast, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let fast color the interpretation and improvisational color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the reckless part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their improvisational trait governs the recalculation; their energetic trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from affectionate: a pause, look, posture shift, or too-precise question. The second beat comes from stubborn, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let reckless color the interpretation and fast color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is observant beneath humor. The scene becomes interesting when the improvisational part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their energetic trait governs the recalculation; their reckless trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from energetic, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let stubborn color the interpretation and stubborn color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is goofy. The scene becomes interesting when the fast part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their fast trait governs the recalculation; their improvisational trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from reckless, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let improvisational color the interpretation and energetic color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is affectionate. The scene becomes interesting when the stubborn part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their reckless trait governs the recalculation; their fast trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from observant beneath humor: a pause, look, posture shift, or too-precise question. The second beat comes from improvisational, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let energetic color the interpretation and reckless color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is creative. The scene becomes interesting when the energetic part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their stubborn trait governs the recalculation; their stubborn trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from goofy: a pause, look, posture shift, or too-precise question. The second beat comes from fast, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let fast color the interpretation and improvisational color the response.

- 23. When they are bored:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the reckless part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their improvisational trait governs the recalculation; their energetic trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from affectionate: a pause, look, posture shift, or too-precise question. The second beat comes from stubborn, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let reckless color the interpretation and fast color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is observant beneath humor. The scene becomes interesting when the improvisational part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their energetic trait governs the recalculation; their reckless trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from energetic, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let stubborn color the interpretation and stubborn color the response.

M. Scene Seed Bank

- Give Joel a scene where being goofy solves the practical problem but damages a relationship.
- Put Joel with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Joel did not know they had.
- Write a low-stakes competition where Joel's fast side becomes unexpectedly intense.
- Give Joel information that would help them win an argument but hurt someone if revealed.
- Force Joel to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Joel does in the three seconds after realizing it failed.
- Have another character misunderstand Joel's loyal behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Joel without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Joel asks why or pretends not to care.
- Write a scene where Joel has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Joel to the single adjective 'goofy'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: goofy
02. Secondary trait: fast
03. Contradictory trait: loyal
04. Social pressure trait: improvisational
05. Hidden-useful trait: affectionate
06. Wants to keep old friendship alive and fun
07. Needs to learn when the joke needs to stop before someone else has to stop it
08. Core fear cluster: growing apart or becoming the friend everyone outgrows

09. Pressure point: seriousness can feel like loss of identity
10. Role: Mako's OG/oldest close friend; goofball energy
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: specific compliments
22. Likely comfort: competence without showboating
23. Likely comfort: people who say what they mean
24. Likely comfort: being remembered accurately
25. Likely comfort: objects with personal history
26. Likely friction: people treating boundaries as challenges
27. Likely friction: being cornered into instant disclosure
28. Likely friction: needless ambiguity
29. Likely friction: being spoken for
30. Likely friction: social tests nobody agreed to
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

14 Blade

CORE / PRANK WAR

PRONOUNS

he/him

SPECIES / TYPE

Expie

AGE

same age as Naki

STORY ROLE

Naki's friend, casual-intimacy partner in an intermediate stage, and later boyfriend

Writing thesis: Blade should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being confident and teasing, wanting to be chosen for who he is rather than only for chemistry or convenience, and needing to name emotional stakes instead of hiding behind easy intimacy.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Blade is male, uses he/him pronouns, is an Expie, and is the same age as Naki.
- He begins as one of Naki's friends.
- Current relationship chronology includes a deliberately casual, nonsexual friends-with-benefits-style stage: affection, flirting, cuddling, shared hoodies, and occasional kisses without immediately formalizing the relationship.
- During the prank-war era, the relationship develops into an explicit boyfriend relationship.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between confident and teasing. The silhouette should communicate how Blade occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'confident' trait readable at rest and the 'teasing' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: confident • teasing • attentive • competitive • loyal • perceptive • affectionate • resourceful • patient when it matters • protective

WANTS

be chosen for who he is rather than only for chemistry or convenience

NEEDS

name emotional stakes instead of hiding behind easy intimacy

FEARS

a relationship becoming important without clear mutual language

PRESSURE POINT

jealousy/uncertainty appears first as over-controlled humor

Internal tension	How to write it
Confident vs. Loyal	Both are true. Do not pick one permanently. Under low pressure, confident can dominate; under relational or public pressure, loyal may interrupt it, creating behavior that feels inconsistent only from the outside.
Teasing vs. Perceptive	Both are true. Do not pick one permanently. Under low pressure, teasing can dominate; under relational or public pressure, perceptive may interrupt it, creating behavior that feels inconsistent only from the outside.
Attentive vs. Affectionate	Both are true. Do not pick one permanently. Under low pressure,

	attentive can dominate; under relational or public pressure, affectionate may interrupt it, creating behavior that feels inconsistent only from the outside.
Competitive vs. Resourceful	Both are true. Do not pick one permanently. Under low pressure, competitive can dominate; under relational or public pressure, resourceful may interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Patient When It Matters	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, patient when it matters may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their confident side becomes less guarded; they spend less effort managing how they are read and allow competitive behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The teasing trait shapes what they notice; loyal shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The competitive side becomes more exacting, while affectionate determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing loyal / resourceful contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through resourceful; their mistake risk is letting confident justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their patient when it matters trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their confident trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

79. 1. NOTICE - Blade first filters a situation through confident: what detail feels immediately important?
80. 2. CLASSIFY - the teasing side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
81. 3. PROTECT - before choosing an action, they protect a self-image connected to being attentive. This is where a flaw can hide inside a virtue.
82. 4. CHOOSE - they select the move most likely to help them be chosen for who he is rather than only for chemistry or convenience. Under pressure, this short-term goal can conflict with what they actually need: name emotional stakes instead of hiding behind easy intimacy.
83. 5. REVISE - if another person reacts unexpectedly, the competitive trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
84. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Blade from a line with the name tag removed?
- Does the line reflect at least one of: confident, teasing, attentive - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

CORE CAST / PRANK-WAR ARC

Blade is not there to “complete” Naki; he should be compelling enough that the romance feels like two complete people discovering that their friendship has become uniquely important.

- Blade is male and uses he/him pronouns.
- Blade is an Expie.
- Blade is the same age as Naki.
- He begins as one of Naki's friends.
- During the prank-war arc, Blade and Naki's relationship develops until Blade becomes Naki's boyfriend.

Visual & Physical Direction

- Keep him visually distinct from Naki while remaining recognizably Expie.
- Exact palette and accessories remain open; do not import the unrelated pink-protogen Blade design from another project.
- A sharper or more angular accessory language can subtly support the name “Blade” without literal weapons.
- His posture can be more openly reactive than Naki's, creating readable contrast in two-shots.
- Romantic visual storytelling should come from repeated proximity and familiarity, not stereotyped hearts or constant blushing.

Personality Architecture

playfully competitive, loyal, perceptive, bold enough to escalate a joke, protective without being possessive, more openly amused than Naki, patient with Naki's silences, capable of serious focus.

WANTS A relationship with Naki that is chosen openly instead of living forever in plausible-deniability friendship.

NEEDS To recognize when teasing is hiding a real question he should simply ask.

FEARS Misreading closeness and damaging a friendship he values.

PRESSURE POINT Moments where Naki retreats emotionally and Blade

cannot tell whether to follow or give space.

Voice & Dialogue Guide

- Quick, teasing responses in playful scenes.
- Comfortable using Naki's name as a punchline or a reassurance depending on tone.
- Can become unexpectedly direct when the joke stops protecting either of them.
- Does not need to be louder than Naki to contrast him.
- Affection often appears as noticing practical details.
- Avoid generic romance dialogue; their shared history should shape wording.

Competencies

Prank planning • Reading Naki's habits • Improvisation • Social confidence • Keeping a bit going • Knowing when competition has crossed into real concern

Weaknesses, Friction & Failure Modes

- May push a joke one step too far
- Can use humor to avoid asking vulnerable questions
- Competitive pride
- Sometimes assumes Naki wants space when he wants reassurance
- May become protective in ways Naki reads as overreaction
- Can get tunnel vision during prank escalation

Relationship Dynamics

- Naki: Central relationship. Friendship comes first; attraction grows through accumulated familiarity, mutual trust, private shorthand, and the realization that each is tracking the other differently from everyone else.
- Scarf: Potential early observer/tease source who can notice the shift.
- Sododa: Their optimism can accelerate prank-war energy.
- Polar: A funny contrast between Blade's competitive spontaneity and Polar's excessive formality.
- Raine: Natural chaos collaborator.
- Deniy: A dangerous ally in prank logic: Deniy is willing to go much further, forcing Blade to define limits.

Arc Trajectory

- 1. Enter as a real friend with goals and humor independent of romance.
- 2. Use prank rivalry/cooperation to create repeated private scenes with Naki.
- 3. Seed attraction through attention rather than declarations.
- 4. Force a moment where one of them must choose honesty over preserving the joke.
- 5. After they become boyfriends, continue giving them disagreement, friendship, and separate agency.

Scene-Writing Guide

- Let Blade be right about Naki sometimes and wrong other times.
- Use repeated objects/locations from the prank war as relationship callbacks.
- A sincere line should often follow a joke, not replace his personality.
- Give him scenes without Naki so he remains dimensional.
- Avoid jealousy as the default romance engine.
- Physical affection should develop in stages consistent with established trust.

Continuity Redlines

- Do not import Blade details from the separate Riven Solace or eldritch projects.
- Do not make the romance instantaneous.
- Do not turn Blade into Naki's therapist or fixer.
- No literal combat-blade gimmick unless later canon establishes one.

Story Hooks & Chapter Seeds

- Blade builds a prank around a detail only someone very close to Naki would know, and realizes what that implies.
- A prank goes wrong and Blade drops the competition instantly to check Naki.
- Polar formally asks whether they are “courting,” causing catastrophic awkwardness.
- Blade privately tells Deniy that one prank crosses a line.
- Their first explicitly romantic choice happens after a moment that would have been easy to laugh off.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
quiet food/drink routines	performative concern
rooms where silence is allowed	being spoken for
winning fairly	social tests nobody agreed to

private creative time	being reduced to one trait
clever solutions	fake apologies
specific compliments	carelessness with private information
competence without showboating	having motives assigned to them
repair after conflict	people treating boundaries as challenges

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of a relationship becoming important without clear mutual language can make normal confident behavior harden into a defense.
- Common mistake: using attentive as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Naki: friendship -> deliberately casual nonsexual FWB-style affection -> later explicit boyfriend stage.

prank-war cast: recurring peers.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Blade, keep the central pressure tied to wanting to be chosen for who he is rather than only for chemistry or convenience while actually needing to name emotional stakes instead of hiding behind easy intimacy.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Blade, keep the central pressure tied to wanting to be chosen for who he is rather than only for chemistry or convenience while actually needing to name emotional stakes instead of hiding behind easy intimacy.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Blade, keep the central pressure tied to wanting to be chosen for who he is rather than

	only for chemistry or convenience while actually needing to name emotional stakes instead of hiding behind easy intimacy.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Blade, keep the central pressure tied to wanting to be chosen for who he is rather than only for chemistry or convenience while actually needing to name emotional stakes instead of hiding behind easy intimacy.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Blade, keep the central pressure tied to wanting to be chosen for who he is rather than only for chemistry or convenience while actually needing to name emotional stakes instead of hiding behind easy intimacy.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Blade, keep the central pressure tied to wanting to be chosen for who he is rather than only for chemistry or convenience while actually needing to name emotional stakes instead of hiding behind easy intimacy.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Blade, keep the central pressure tied to wanting to be chosen for who he is rather than only for chemistry or convenience while actually needing to name emotional stakes instead of hiding behind easy intimacy.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from confident: a pause, look, posture shift, or too-precise question. The second beat comes from teasing, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let teasing color the interpretation and competitive color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is attentive. The scene becomes interesting when the perceptive part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their competitive trait governs the recalculation; their resourceful trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from protective, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let perceptive color the interpretation and teasing color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is affectionate. The scene becomes interesting when the competitive part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their resourceful trait governs the recalculation; their perceptive trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from patient when it matters: a pause, look, posture shift, or too-precise question. The second beat comes from resourceful, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let protective color the interpretation and protective color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is confident. The scene becomes interesting when the teasing part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their teasing trait governs the recalculation; their competitive trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from attentive: a pause, look, posture shift, or too-precise question. The second beat comes from perceptive, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let competitive color the interpretation and resourceful color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the protective part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their perceptive trait governs the recalculation; their teasing trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from affectionate: a pause, look, posture shift, or too-precise question. The second beat comes from competitive, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let resourceful color the interpretation and perceptive color the response.

- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is patient when it matters. The scene becomes interesting when the resourceful part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their protective trait governs the recalculation; their protective trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from confident: a pause, look, posture shift, or too-precise question. The second beat comes from teasing, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let teasing color the interpretation and competitive color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is attentive. The scene becomes interesting when the perceptive part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their competitive trait governs the recalculation; their resourceful trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from protective, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let perceptive color the interpretation and teasing color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is affectionate. The scene becomes interesting when the competitive part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their resourceful trait governs the recalculation; their perceptive trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from patient when it matters: a pause, look, posture shift, or too-precise question. The second beat comes from resourceful, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let protective color the interpretation and protective color the response.

M. Scene Seed Bank

- Give Blade a scene where being confident solves the practical problem but damages a relationship.
- Put Blade with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Blade did not know they had.
- Write a low-stakes competition where Blade's teasing side becomes unexpectedly intense.
- Give Blade information that would help them win an argument but hurt someone if revealed.
- Force Blade to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Blade does in the three seconds after realizing it failed.
- Have another character misunderstand Blade's attentive behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Blade without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Blade asks why or pretends not to care.
- Write a scene where Blade has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Blade to the single adjective 'confident'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: confident
02. Secondary trait: teasing
03. Contradictory trait: attentive
04. Social pressure trait: competitive
05. Hidden-useful trait: loyal
06. Wants to be chosen for who he is rather than only for chemistry or convenience
07. Needs to name emotional stakes instead of hiding behind easy intimacy
08. Core fear cluster: a relationship becoming important without clear mutual language
09. Pressure point: jealousy/uncertainty appears first as over-controlled humor
10. Role: Naki's friend, casual-intimacy partner in an intermediate stage, and later boyfriend
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: quiet food/drink routines
22. Likely comfort: rooms where silence is allowed
23. Likely comfort: winning fairly
24. Likely comfort: private creative time
25. Likely comfort: clever solutions
26. Likely friction: performative concern
27. Likely friction: being spoken for
28. Likely friction: social tests nobody agreed to
29. Likely friction: being reduced to one trait
30. Likely friction: fake apologies
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

15 Lime

COURT / FRIENDS

PRONOUNS	he/him
SPECIES / TYPE	winged kemono dragon
AGE	same age as Mako
STORY ROLE	friend and lawyer for the group

Writing thesis: Lime should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being competent and quick, wanting to defend the group without reducing them to a case file, and needing to keep friendship and professional judgment from consuming each other.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Lime is male and the same age as Mako.
- He is a winged kemono dragon, a friend of the group, and one of the group's lawyers.
- His design uses vivid green, red-and-black striped limb accents, dark dorsal spikes, large wings with red membranes and black edging, a long tail with a dark dorsal ridge, horns/crest, and red/black striped hands and feet.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Vivid green body, red-black striped limb accents, dark dorsal spikes, red-membraned wings with black edging, long ridged tail, horns/crest, and striped extremities create a deliberately loud silhouette. Keep the legal-professional role from visually flattening him into a suit-only design.

- Primary silhouette rule: body language should make the 'competent' trait readable at rest and the 'quick' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: competent • quick • strategic • loyal • principled • energetic • precise • confident • protective • visually bold

WANTS	defend the group without reducing them to a case file
NEEDS	keep friendship and professional judgment from consuming each other
FEARS	failing a friend through avoidable legal error
PRESSURE POINT	opposing counsel forcing emotional facts into procedural boxes

Internal tension	How to write it
Competent vs. Principled	Both are true. Do not pick one permanently. Under low pressure, competent can dominate; under relational or public pressure, principled may interrupt it, creating behavior that feels inconsistent only from the outside.
Quick vs. Energetic	Both are true. Do not pick one permanently. Under low pressure, quick can dominate; under relational or public pressure, energetic may interrupt it, creating behavior that feels inconsistent only from the outside.
Strategic vs. Precise	Both are true. Do not pick one permanently. Under low pressure, strategic can dominate; under relational or public pressure, precise may interrupt it, creating behavior that feels inconsistent only from the outside.

	outside.
Loyal vs. Confident	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, confident may interrupt it, creating behavior that feels inconsistent only from the outside.
Principled vs. Protective	Both are true. Do not pick one permanently. Under low pressure, principled can dominate; under relational or public pressure, protective may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their competent side becomes less guarded; they spend less effort managing how they are read and allow loyal behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The quick trait shapes what they notice; principled shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The loyal side becomes more exacting, while precise determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing principled / confident contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through confident; their mistake risk is letting competent justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their protective trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their competent trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

85. 1. NOTICE - Lime first filters a situation through competent: what detail feels immediately important?
86. 2. CLASSIFY - the quick side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
87. 3. PROTECT - before choosing an action, they protect a self-image connected to being strategic. This is where a flaw can hide inside a virtue.
88. 4. CHOOSE - they select the move most likely to help them defend the group without reducing them to a case file. Under pressure, this short-term goal can conflict with what they actually need: keep friendship and professional judgment from consuming each other.
89. 5. REVISE - if another person reacts unexpectedly, the loyal trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
90. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Lime from a line with the name tag removed?
- Does the line reflect at least one of: competent, quick, strategic - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

COURT ARC ALLIES

Lime combines an extremely vivid dragon design with genuine kindness, making him visually loud and behaviorally reassuring - an excellent contrast to Emily's controlled adversarial presence.

- Lime is male.
- He is the same age as Mako.
- He is a winged kemono dragon.
- He is a friend of the group and one of the group's lawyers.
- His design includes a bright vivid green body; red-and-black striped limb accents; dark dorsal spikes; large wings with red membranes and black edging; a long tail with a dark dorsal ridge; horns/crest; and red/black striped hands and feet.

Visual & Physical Direction

- Preserve the vivid green as the dominant color.
- Red/black striping belongs on limb accents, hands, and feet.
- Large wings need spatial planning in interiors and court-adjacent scenes.
- Dark dorsal spikes and tail ridge should create a strong back silhouette.
- Red wing membranes with black edging make folded and open-wing poses visually distinct.
- Formal clothing, if used, must be tailored around wings/tail rather than magically ignoring anatomy.

Personality Architecture

kind, professional, patient, confident, warm, detail-oriented, capable of firm confrontation, protective of clients/friends, not intimidated by Emily.

WANTS To give the group a competent legal voice without turning their pain into spectacle.

NEEDS To separate friendship instincts from legal strategy when the two conflict.

FEARS A preventable procedural mistake undermining people who already suffered.

PRESSURE POINT When a friend wants emotional vindication that the legal

process cannot deliver immediately.

Voice & Dialogue Guide

- Friendly baseline.
- Professional language becomes more structured in legal contexts.
- Explains strategy without talking down to friends.
- Can politely interrupt misinformation.
- When angry, becomes more exact rather than less controlled.
- Avoid dragon growls as dialogue punctuation unless anatomically natural and used sparingly.

Competencies

Legal reasoning • Client communication • Preparation • Calm confrontation • Visual presence • Maintaining kindness under adversarial pressure

Weaknesses, Friction & Failure Modes

- Can overprepare
- May absorb friends' stress
- Wants to protect people from legal uncertainty
- Can become frustrated when emotion and strategy diverge
- Physical size/wings can make small rooms awkward
- Kindness may be mistaken for softness

Relationship Dynamics

- Mako: Friend/client-side ally; Mako respects competence but may resist being told to let legal strategy lead.
- Naki: Can help Naki prepare precise testimony without scripting his emotions.
- Aztec: Co-lawyer/friend dynamic; divide strengths so they feel like a team rather than duplicates.
- Diamond: Legal support partnership; Lime should make space for Diamond's voice device without treating it as an inconvenience.
- Emily: Direct professional opponent. Their contrast is strongest when both are competent.
- Ivan: Opposing party/client of opposing counsel; Lime should focus on conduct and evidence rather than personal grandstanding.

Arc Trajectory

- 1. Enter as a friend who becomes professionally important.
- 2. Show legal competence in preparation, not only courtroom speeches.
- 3. Let a strategic disagreement with the group create tension.
- 4. Give Emily a moment that forces Lime to revise an approach.
- 5. Long-term: balance being emotionally present with not promising outcomes he cannot guarantee.

Scene-Writing Guide

- Account for wings and tail in blocking.
- Use bright design against restrained court environments.
- Let kindness be active: clarify, prepare, protect, correct.
- Do not make him magically know every legal answer.
- Give Aztec and Diamond distinct tasks.
- Courtroom confidence should come from preparation, not theatrics.

Continuity Redlines

- Preserve the exact major visual palette/features.
- Winged kemono dragon.
- Same age as Mako.
- No magical dragon powers in this grounded continuity.

Story Hooks & Chapter Seeds

- Lime has to redesign formal clothing around wings the night before a hearing.
- He tells Mako that being a good witness and being emotionally satisfied are different goals.
- Emily corners a wording issue Lime genuinely missed.
- Diamond supplies a record that lets Lime change strategy.
- After court, Lime drops the professional posture and admits how angry he actually is.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
people who say what they mean	fake apologies
quiet food/drink routines	being spoken for

objects with personal history	being reduced to one trait
low-stakes competition	performative concern
being remembered accurately	jokes that require a real victim
unforced physical comfort	carelessness with private information
specific compliments	having motives assigned to them
competence without showboating	needless ambiguity

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of failing a friend through avoidable legal error can make normal competent behavior harden into a defense.
- Common mistake: using strategic as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Aztec/Diamond: legal teammates.

Emily: opposing lawyer.

Mako/group: friends/clients.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Lime, keep the central pressure tied to wanting to defend the group without reducing them to a case file while actually needing to keep friendship and professional judgment from consuming each other.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Lime, keep the central pressure tied to wanting to defend the group without reducing them to a case file while actually needing to keep friendship and professional judgment from consuming each other.

Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Lime, keep the central pressure tied to wanting to defend the group without reducing them to a case file while actually needing to keep friendship and professional judgment from consuming each other.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Lime, keep the central pressure tied to wanting to defend the group without reducing them to a case file while actually needing to keep friendship and professional judgment from consuming each other.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Lime, keep the central pressure tied to wanting to defend the group without reducing them to a case file while actually needing to keep friendship and professional judgment from consuming each other.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Lime, keep the central pressure tied to wanting to defend the group without reducing them to a case file while actually needing to keep friendship and professional judgment from consuming each other.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Lime, keep the central pressure tied to wanting to defend the group without reducing them to a case file while actually needing to keep friendship and professional judgment from consuming each other.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from competent: a pause, look, posture shift, or too-precise question. The second beat comes from quick, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let quick color the interpretation and loyal color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is strategic. The scene becomes interesting when the energetic part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their loyal trait governs the recalculation; their confident trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from principled: a pause, look, posture shift, or too-precise question. The second beat comes from visually bold, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let energetic color the interpretation and quick color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is precise. The scene becomes interesting when the loyal part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their confident trait governs the recalculation; their energetic trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from confident, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let visually bold color the interpretation and visually bold color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is competent. The scene becomes interesting when the quick part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their quick trait governs the recalculation; their loyal trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from strategic: a pause, look, posture shift, or too-precise question. The second beat comes from energetic, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let loyal color the interpretation and confident color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is principled. The scene becomes interesting when the visually bold part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their energetic trait governs the recalculation; their quick trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from precise: a pause, look, posture shift, or too-precise question. The second beat comes from loyal, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let confident color the interpretation and energetic color the response.

- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is protective. The scene becomes interesting when the confident part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their visually bold trait governs the recalculation; their visually bold trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from competent: a pause, look, posture shift, or too-precise question. The second beat comes from quick, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let quick color the interpretation and loyal color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is strategic. The scene becomes interesting when the energetic part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their loyal trait governs the recalculation; their confident trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from principled: a pause, look, posture shift, or too-precise question. The second beat comes from visually bold, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let energetic color the interpretation and quick color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is precise. The scene becomes interesting when the loyal part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their confident trait governs the recalculation; their energetic trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from protective: a pause, look, posture shift, or too-precise question. The second beat comes from confident, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let visually bold color the interpretation and visually bold color the response.

M. Scene Seed Bank

- Give Lime a scene where being competent solves the practical problem but damages a relationship.
- Put Lime with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Lime did not know they had.
- Write a low-stakes competition where Lime's quick side becomes unexpectedly intense.
- Give Lime information that would help them win an argument but hurt someone if revealed.
- Force Lime to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Lime does in the three seconds after realizing it failed.
- Have another character misunderstand Lime's strategic behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Lime without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Lime asks why or pretends not to care.
- Write a scene where Lime has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Lime to the single adjective 'competent'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: competent
02. Secondary trait: quick
03. Contradictory trait: strategic
04. Social pressure trait: loyal
05. Hidden-useful trait: principled
06. Wants to defend the group without reducing them to a case file
07. Needs to keep friendship and professional judgment from consuming each other
08. Core fear cluster: failing a friend through avoidable legal error
09. Pressure point: opposing counsel forcing emotional facts into procedural boxes
10. Role: friend and lawyer for the group
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: people who say what they mean
22. Likely comfort: quiet food/drink routines
23. Likely comfort: objects with personal history
24. Likely comfort: low-stakes competition
25. Likely comfort: being remembered accurately
26. Likely friction: fake apologies
27. Likely friction: being spoken for
28. Likely friction: being reduced to one trait
29. Likely friction: performative concern
30. Likely friction: jokes that require a real victim
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

16 Aztec

COURT / FRIENDS

PRONOUNS	he/him
SPECIES / TYPE	open
AGE	same age as Mako
STORY ROLE	friend and lawyer for the group

Writing thesis: Aztec should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being measured and strategic, wanting to turn lived harm into arguments that survive scrutiny, and needing to leave room for emotion without treating it as evidentiary weakness.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Aztec is male and the same age as Mako.
- He is a friend of the group and one of the group's lawyers.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between measured and strategic. The silhouette should communicate how Aztec occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'measured' trait readable at rest and the 'strategic' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: measured • strategic • patient • precise • loyal • analytical • firm • adaptable • observant • dry

WANTS	turn lived harm into arguments that survive scrutiny
NEEDS	leave room for emotion without treating it as evidentiary weakness
FEARS	being technically right but strategically ineffective
PRESSURE POINT	frustration with bad-faith framing

Internal tension	How to write it
Measured vs. Loyal	Both are true. Do not pick one permanently. Under low pressure, measured can dominate; under relational or public pressure, loyal may interrupt it, creating behavior that feels inconsistent only from the outside.
Strategic vs. Analytical	Both are true. Do not pick one permanently. Under low pressure, strategic can dominate; under relational or public pressure, analytical may interrupt it, creating behavior that feels inconsistent only from the outside.
Patient vs. Firm	Both are true. Do not pick one permanently. Under low pressure, patient can dominate; under relational or public pressure, firm may interrupt it, creating behavior that feels inconsistent only from the outside.
Precise vs. Adaptable	Both are true. Do not pick one permanently. Under low pressure, precise can dominate; under relational or public pressure, adaptable may

	interrupt it, creating behavior that feels inconsistent only from the outside.
Loyal vs. Observant	Both are true. Do not pick one permanently. Under low pressure, loyal can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their measured side becomes less guarded; they spend less effort managing how they are read and allow precise behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The strategic trait shapes what they notice; loyal shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The precise side becomes more exacting, while firm determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing loyal / adaptable contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through adaptable; their mistake risk is letting measured justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their observant trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their measured trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

91. 1. NOTICE - Aztec first filters a situation through measured: what detail feels immediately important?
92. 2. CLASSIFY - the strategic side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
93. 3. PROTECT - before choosing an action, they protect a self-image connected to being patient. This is where a flaw can hide inside a virtue.
94. 4. CHOOSE - they select the move most likely to help them turn lived harm into arguments that survive scrutiny. Under pressure, this short-term goal can conflict with what they actually need: leave room for emotion without treating it as evidentiary weakness.
95. 5. REVISE - if another person reacts unexpectedly, the precise trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
96. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Aztec from a line with the name tag removed?
- Does the line reflect at least one of: measured, strategic, patient - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

COURT ARC ALLIES

Aztec should complement Lime rather than duplicate him: more surgical, tactical, or structurally minded where Lime is the group-facing communicator.

- Aztec is male.
- He is the same age as Mako.
- He is a friend of the group.
- He is one of the group's lawyers.

Visual & Physical Direction

- Specific design remains open.
- Choose a silhouette and palette clearly distinct from Lime's green dragon design.
- Professional presentation can be slightly more minimalist or utilitarian to reinforce role contrast.

Personality Architecture

strategic, measured, skeptical, loyal, prepared, direct, less outwardly warm than Lime but not cold, comfortable challenging friends.

WANTS

A case strategy that survives contact with hostile

questioning.

NEEDS

To remember that witnesses are people, not just

information sources.

FEARS

A preventable contradiction becoming the defining story.

PRESSURE POINT

Friends changing details to make a story sound cleaner.

Voice & Dialogue Guide

- Concise.
- Likes exact dates, sequences, and distinctions.
- Will tell friends when an answer is too broad.
- Less interested in reassurance than preparation.
- Can use dry humor privately.
- Avoid legal jargon dumps.

Competencies

Timeline construction • Case strategy • Cross-checking statements • Stress-testing arguments • Preparation • Identifying avoidable ambiguities

Weaknesses, Friction & Failure Modes

- Can sound harsh
- May overfocus on consistency
- Sometimes treats emotional context as noise
- Impatient with speculation
- Can push witnesses too hard in preparation
- May struggle to switch out of work mode

Relationship Dynamics

- Lime: Co-lawyer; complementary styles. Lime is often the reassuring explainer while Aztec stress-tests the case.
- Diamond: Values organized records and exact retrieval.
- Emily: Professional adversary; likely respects competence even while disliking tactics.
- Mako: Can match Mako's analytical style, which may create either excellent cooperation or stubborn deadlock.
- Naki: Useful preparation partner because Naki naturally notices precise details but may need help separating observation from inference.

Arc Trajectory

- 1. Establish him as the person who finds weak spots before Emily does.
- 2. Let his blunt preparation upset someone.
- 3. Force him to recognize when emotional context is legally or narratively relevant.
- 4. Give him a mistake so he remains human.
- 5. Long-term: learn to prepare people without making them feel cross-examined by their own side.

Scene-Writing Guide

- Use whiteboards/timelines/documents as physical action.
- Let him ask “what do you know” versus “what do you think.”
- Avoid making him an exposition machine.
- Give Lime the relational work Aztec is less suited for.
- Diamond can catch him overlooking communication accessibility.
- His humor should surprise people.

Continuity Redlines

- Same age as Mako.
- Male; group friend and lawyer.
- Species/design currently open.
- No miracle courtroom tricks.

Story Hooks & Chapter Seeds

- Aztec discovers two witnesses use the word “first” differently.
- He irritates Joel by banning jokes during one preparation session - then accidentally makes the funniest comment himself.
- Emily uses Aztec's own preferred precision against the group.
- Aztec and Mako clash over whether a detail is relevant.
- Diamond forces Aztec to slow down and structure a question more clearly.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
rooms where silence is allowed	unearned authority
quiet food/drink routines	carelessness with private information
specific compliments	social tests nobody agreed to
repair after conflict	competence being mistaken for invulnerability
objects with personal history	people treating boundaries as challenges
unforced physical comfort	fake apologies
private creative time	needless ambiguity
clever solutions	being reduced to one trait

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?

- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of being technically right but strategically ineffective can make normal measured behavior harden into a defense.
- Common mistake: using patient as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Lime/Diamond: legal teammates.

Emily: opposition.

group: friend/client network.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Aztec, keep the central pressure tied to wanting to turn lived harm into arguments that survive scrutiny while actually needing to leave room for emotion without treating it as evidentiary weakness.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Aztec, keep the central pressure tied to wanting to turn lived harm into arguments that survive scrutiny while actually needing to leave room for emotion without treating it as evidentiary weakness.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Aztec, keep the central pressure tied to wanting to turn lived harm into arguments that survive scrutiny while actually needing to leave room for emotion without treating it as evidentiary weakness.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Aztec, keep the central pressure tied to wanting to turn lived harm into arguments that survive scrutiny while actually needing to leave room for emotion without treating it as evidentiary weakness.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Aztec, keep the central pressure tied to wanting to turn lived harm into arguments that survive scrutiny while actually needing to leave room for emotion without treating it as evidentiary weakness.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Aztec, keep the central pressure tied to

	wanting to turn lived harm into arguments that survive scrutiny while actually needing to leave room for emotion without treating it as evidentiary weakness.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Aztec, keep the central pressure tied to wanting to turn lived harm into arguments that survive scrutiny while actually needing to leave room for emotion without treating it as evidentiary weakness.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from measured: a pause, look, posture shift, or too-precise question. The second beat comes from strategic, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let strategic color the interpretation and precise color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is patient. The scene becomes interesting when the analytical part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their precise trait governs the recalculation; their adaptable trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from dry, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let analytical color the interpretation and strategic color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is firm. The scene becomes interesting when the precise part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their adaptable trait governs the recalculation; their analytical trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from adaptable, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let dry color the interpretation and dry color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is measured. The scene becomes interesting when the strategic part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their strategic trait governs the recalculation; their precise trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from patient: a pause, look, posture shift, or too-precise question. The second beat comes from analytical, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let precise color the interpretation and adaptable color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is loyal. The scene becomes interesting when the dry part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their analytical trait governs the recalculation; their strategic trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from firm: a pause, look, posture shift, or too-precise question. The second beat comes from precise, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adaptable color the interpretation and analytical color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the adaptable part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their dry trait governs the recalculation; their dry trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from measured: a pause, look, posture shift, or too-precise question. The second beat comes from strategic, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let strategic color the interpretation and precise color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is patient. The scene becomes interesting when the analytical part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their precise trait governs the recalculation; their adaptable trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from loyal: a pause, look, posture shift, or too-precise question. The second beat comes from dry, which determines whether they approach, deflect, challenge, or wait.

26. When they win but the other person is genuinely upset: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let analytical color the interpretation and strategic color the response.

27. When a family member makes a decision they hate: Their instinct is to protect their self-image as someone who is firm. The scene becomes interesting when the precise part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their adaptable trait governs the recalculation; their analytical trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from adaptable, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let dry color the interpretation and dry color the response.

M. Scene Seed Bank

- Give Aztec a scene where being measured solves the practical problem but damages a relationship.
- Put Aztec with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Aztec did not know they had.
- Write a low-stakes competition where Aztec's strategic side becomes unexpectedly intense.
- Give Aztec information that would help them win an argument but hurt someone if revealed.
- Force Aztec to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Aztec does in the three seconds after realizing it failed.
- Have another character misunderstand Aztec's patient behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Aztec without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Aztec asks why or pretends not to care.
- Write a scene where Aztec has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Aztec to the single adjective 'measured'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: measured
02. Secondary trait: strategic
03. Contradictory trait: patient
04. Social pressure trait: precise
05. Hidden-useful trait: loyal
06. Wants to turn lived harm into arguments that survive scrutiny
07. Needs to leave room for emotion without treating it as evidentiary weakness
08. Core fear cluster: being technically right but strategically ineffective
09. Pressure point: frustration with bad-faith framing
10. Role: friend and lawyer for the group
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.

15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: rooms where silence is allowed
22. Likely comfort: quiet food/drink routines
23. Likely comfort: specific compliments
24. Likely comfort: repair after conflict
25. Likely comfort: objects with personal history
26. Likely friction: unearned authority
27. Likely friction: carelessness with private information
28. Likely friction: social tests nobody agreed to
29. Likely friction: competence being mistaken for invulnerability
30. Likely friction: people treating boundaries as challenges
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

17 Diamond

COURT / FRIENDS

PRONOUNS

open

SPECIES / TYPE

open

AGE

open

STORY ROLE

legal support; communicates with voice synthesizer/device

Writing thesis: Diamond should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being precise and patient, wanting to make their contribution impossible to overlook without performing for others, and needing to be allowed communicative time and agency.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Diamond assists with legal work.
- Diamond uses a voice synthesizer/voice device to communicate.
- The device is a communication tool, not a personality gimmick or shorthand for intelligence.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact pronouns remain open until explicitly locked.
- Exact species/type remains open.
- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between precise and patient. The silhouette should communicate how Diamond occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'precise' trait readable at rest and the 'patient' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: precise • patient • technical • observant • deliberate • loyal • resourceful • calm • sharp • wry

WANTS

make their contribution impossible to overlook without performing for others

NEEDS

be allowed communicative time and agency

FEARS

others confusing communication method with competence

PRESSURE POINT

being interrupted or spoken for

Internal tension	How to write it
Precise vs. Deliberate	Both are true. Do not pick one permanently. Under low pressure, precise can dominate; under relational or public pressure, deliberate may interrupt it, creating behavior that feels inconsistent only from the outside.
Patient vs. Loyal	Both are true. Do not pick one permanently. Under low pressure, patient can dominate; under relational or public pressure, loyal may interrupt it, creating behavior that feels inconsistent only from the outside.
Technical vs. Resourceful	Both are true. Do not pick one permanently. Under low pressure, technical can dominate; under relational or public pressure, resourceful

	may interrupt it, creating behavior that feels inconsistent only from the outside.
Observant vs. Calm	Both are true. Do not pick one permanently. Under low pressure, observant can dominate; under relational or public pressure, calm may interrupt it, creating behavior that feels inconsistent only from the outside.
Deliberate vs. Sharp	Both are true. Do not pick one permanently. Under low pressure, deliberate can dominate; under relational or public pressure, sharp may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their precise side becomes less guarded; they spend less effort managing how they are read and allow observant behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The patient trait shapes what they notice; deliberate shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The observant side becomes more exacting, while resourceful determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing deliberate / calm contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through calm; their mistake risk is letting precise justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their sharp trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their precise trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

97. 1. NOTICE - Diamond first filters a situation through precise: what detail feels immediately important?
98. 2. CLASSIFY - the patient side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
99. 3. PROTECT - before choosing an action, they protect a self-image connected to being technical. This is where a flaw can hide inside a virtue.
100. 4. CHOOSE - they select the move most likely to help them make their contribution impossible to overlook without performing for others. Under pressure, this short-term goal can conflict with what they actually need: be allowed communicative time and agency.
101. 5. REVISE - if another person reacts unexpectedly, the observant trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
102. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Diamond from a line with the name tag removed?
- Does the line reflect at least one of: precise, patient, technical - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

COURT ARC ALLIES

Diamond's voice synthesizer should be treated as a normal communication tool, not a gimmick; the character's competence and personality matter more than the device.

- Diamond uses a voice synthesizer/voice device.
- Diamond assists with legal work for the group during the court arc.

Visual & Physical Direction

- Keep the voice device visibly integrated only as much as practical for the chosen design.
- Avoid making the device look futuristic unless the setting's ordinary technology supports that design.
- Specific species, gender, and age remain open.
- Give Diamond visual organization cues - labeled folders, tabs, structured notes - without making neatness their entire identity.

Personality Architecture

methodical, patient, wry, independent, precise, observant, not interested in being pitied, good at noticing process failures, quietly assertive.

WANTS To make the group's information usable, retrievable, and hard to misrepresent.

NEEDS To insist on communication pacing that works for them rather than accommodating everyone else first.

FEARS Important information being ignored because the room is impatient.

PRESSURE POINT People speaking over the device or assuming delay means uncertainty.

Voice & Dialogue Guide

- Output can be concise and deliberate.
- The synthesizer does not require robotic personality.

- Timing can matter: a pause may be device-use, thought, or both.
- Diamond can use humor through wording just as any other character can.
- Other characters should wait rather than finish Diamond's sentences.
- Avoid phonetic “robot voice” text.

Competencies

Document organization • Evidence tracking • Timeline support • Precision • Communication planning • Catching missing references

Weaknesses, Friction & Failure Modes

- Can over-organize
- Frustrated by chaotic meetings
- May withhold a comment until it is fully formulated
- Can become blunt when repeatedly interrupted
- Sometimes prioritizes record clarity over emotional pacing
- May take on invisible support labor

Relationship Dynamics

- Lime: Collaborative legal support relationship built on mutual respect.
- Aztec: Strong process pairing, with Diamond often catching accessibility or organization issues Aztec overlooks.
- Emily: Opposing presence whose wording Diamond can catalog and compare.
- Naki: Both value exact details; could work well reconstructing sequences.
- Doc: Potentially excellent post-incident information partner.

Arc Trajectory

- 1. Introduce the device matter-of-factly.
- 2. Establish Diamond as indispensable through competence, not inspirational framing.
- 3. Let someone interrupt or patronize once and be corrected by the group.
- 4. Use the court arc to give Diamond active strategic contributions.
- 5. Long-term: distribute support work so Diamond is not only the person who fixes everyone else's records.

Scene-Writing Guide

- Do not narrate the voice device every line.
- Let silence remain normal.
- Have other characters make eye contact with Diamond, not the device.
- Use exact wording in legal scenes.
- Give Diamond jokes, irritation, preferences, and off-duty interests.
- Avoid “overcoming disability” framing.

Continuity Redlines

- Voice synthesizer/device is canon.
- Do not remove the device for convenience.
- Do not make the device a sci-fi supercomputer.
- Gender/species remain open.

Story Hooks & Chapter Seeds

- Diamond notices Emily repeats one unusual phrase across separate hearings.
- A meeting runs better only after Diamond forces everyone to use a structured turn order.
- Joel learns not to fill device pauses and is visibly proud of himself for getting it right.
- Doc and Diamond reconcile two slightly different timelines.
- Diamond presents one tiny document detail that changes the group's strategy.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
quiet food/drink routines	having motives assigned to them
specific compliments	performative concern
competence without showboating	jokes that require a real victim
unforced physical comfort	being cornered into instant disclosure
repair after conflict	consequences being treated as temporary
inside jokes that survive context changes	needless ambiguity
rooms where silence is allowed	being spoken for
low-stakes competition	people treating boundaries as challenges

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?

- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of others confusing communication method with competence can make normal precise behavior harden into a defense.
- Common mistake: using technical as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Lime/Aztec: legal teammates.

Emily: opposition.

group: support.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Diamond, keep the central pressure tied to wanting to make their contribution impossible to overlook without performing for others while actually needing to be allowed communicative time and agency.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Diamond, keep the central pressure tied to wanting to make their contribution impossible to overlook without performing for others while actually needing to be allowed communicative time and agency.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Diamond, keep the central pressure tied to wanting to make their contribution impossible to overlook without performing for others while actually needing to be allowed communicative time and agency.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Diamond, keep the central pressure tied to wanting to make their contribution impossible to overlook without performing for others while actually needing to be allowed communicative time and agency.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For

	Diamond, keep the central pressure tied to wanting to make their contribution impossible to overlook without performing for others while actually needing to be allowed communicative time and agency.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Diamond, keep the central pressure tied to wanting to make their contribution impossible to overlook without performing for others while actually needing to be allowed communicative time and agency.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Diamond, keep the central pressure tied to wanting to make their contribution impossible to overlook without performing for others while actually needing to be allowed communicative time and agency.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from precise: a pause, look, posture shift, or too-precise question. The second beat comes from patient, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let patient color the interpretation and observant color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is technical. The scene becomes interesting when the loyal part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their calm trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from deliberate: a pause, look, posture shift, or too-precise question. The second beat comes from wry, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let loyal color the interpretation and patient color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is resourceful. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their calm trait governs the recalculation; their loyal trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from sharp: a pause, look, posture shift, or too-precise question. The second beat comes from calm, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let wry color the interpretation and wry color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is precise. The scene becomes interesting when the patient part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their observant trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from technical: a pause, look, posture shift, or too-precise question. The second beat comes from loyal, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and calm color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is deliberate. The scene becomes interesting when the wry part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their loyal trait governs the recalculation; their patient trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from resourceful: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let calm color the interpretation and loyal color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is sharp. The scene becomes interesting when the calm part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their wry trait governs the recalculation; their wry trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from precise: a pause, look, posture shift, or too-precise question. The second beat comes from patient, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let patient color the interpretation and observant color the response.

- 23. When they are bored:** Their instinct is to protect their self-image as someone who is technical. The scene becomes interesting when the loyal part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their calm trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from deliberate: a pause, look, posture shift, or too-precise question. The second beat comes from wry, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let loyal color the interpretation and patient color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is resourceful. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their calm trait governs the recalculation; their loyal trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from sharp: a pause, look, posture shift, or too-precise question. The second beat comes from calm, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let wry color the interpretation and wry color the response.

M. Scene Seed Bank

- Give Diamond a scene where being precise solves the practical problem but damages a relationship.
- Put Diamond with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Diamond did not know they had.
- Write a low-stakes competition where Diamond's patient side becomes unexpectedly intense.
- Give Diamond information that would help them win an argument but hurt someone if revealed.
- Force Diamond to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Diamond does in the three seconds after realizing it failed.
- Have another character misunderstand Diamond's technical behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Diamond without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Diamond asks why or pretends not to care.
- Write a scene where Diamond has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Diamond to the single adjective 'precise'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.
- Do not have other characters routinely speak for Diamond when the communication device can carry their own words.

O. 50-Point Quick Reference

01. Primary trait: precise
02. Secondary trait: patient
03. Contradictory trait: technical
04. Social pressure trait: observant
05. Hidden-useful trait: deliberate
06. Wants to make their contribution impossible to overlook without performing for others
07. Needs to be allowed communicative time and agency

08. Core fear cluster: others confusing communication method with competence
09. Pressure point: being interrupted or spoken for
10. Role: legal support; communicates with voice synthesizer/device
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: quiet food/drink routines
22. Likely comfort: specific compliments
23. Likely comfort: competence without showboating
24. Likely comfort: unforced physical comfort
25. Likely comfort: repair after conflict
26. Likely friction: having motives assigned to them
27. Likely friction: performative concern
28. Likely friction: jokes that require a real victim
29. Likely friction: being cornered into instant disclosure
30. Likely friction: consequences being treated as temporary
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

18 Sododa

PRANK WAR

PRONOUNS	they/them
SPECIES / TYPE	Expie
AGE	open
STORY ROLE	optimistic,excited recurring prank-war character

Writing thesis: Sododa should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being optimistic and excited, wanting to make everything more fun without making everything about them, and needing to learn to check whether enthusiasm is shared.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Sododa uses they/them pronouns.
- They are an Expie.
- They are consistently optimistic and excited.
- They are a recurring prank-war character.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between optimistic and excited. The silhouette should communicate how Sododa occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'optimistic' trait readable at rest and the 'excited' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: optimistic • excited • energetic • earnest • creative • impulsive • friendly • competitive • resilient • expressive

WANTS	make everything more fun without making everything about them
NEEDS	learn to check whether enthusiasm is shared
FEARS	being the only person still excited after a line was crossed
PRESSURE POINT	momentum can outrun consent

Internal tension	How to write it
Optimistic vs. Creative	Both are true. Do not pick one permanently. Under low pressure, optimistic can dominate; under relational or public pressure, creative may interrupt it, creating behavior that feels inconsistent only from the outside.
Excited vs. Impulsive	Both are true. Do not pick one permanently. Under low pressure, excited can dominate; under relational or public pressure, impulsive may interrupt it, creating behavior that feels inconsistent only from the outside.
Energetic vs. Friendly	Both are true. Do not pick one permanently. Under low pressure, energetic can dominate; under relational or public pressure, friendly may interrupt it, creating behavior that feels inconsistent only from the

	outside.
Earnest vs. Competitive	Both are true. Do not pick one permanently. Under low pressure, earnest can dominate; under relational or public pressure, competitive may interrupt it, creating behavior that feels inconsistent only from the outside.
Creative vs. Resilient	Both are true. Do not pick one permanently. Under low pressure, creative can dominate; under relational or public pressure, resilient may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their optimistic side becomes less guarded; they spend less effort managing how they are read and allow earnest behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The excited trait shapes what they notice; creative shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The earnest side becomes more exacting, while friendly determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing creative / competitive contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through competitive; their mistake risk is letting optimistic justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their resilient trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their optimistic trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

103. 1. NOTICE - Sododa first filters a situation through optimistic: what detail feels immediately important?
104. 2. CLASSIFY - the excited side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
105. 3. PROTECT - before choosing an action, they protect a self-image connected to being energetic. This is where a flaw can hide inside a virtue.
106. 4. CHOOSE - they select the move most likely to help them make everything more fun without making everything about them. Under pressure, this short-term goal can conflict with what they actually need: learn to check whether enthusiasm is shared.
107. 5. REVISE - if another person reacts unexpectedly, the earnest trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
108. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Sododa from a line with the name tag removed?
- Does the line reflect at least one of: optimistic, excited, energetic - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

PRANK-WAR ARC

Sododa brings enthusiastic forward motion to the prank war: the person most likely to hear “this is probably a bad idea” and respond with sincere excitement about how interesting that makes it.

- Sododa uses they/them pronouns.
- Sododa is an Expie.
- They are consistently optimistic and excited.
- They recur during the prank-war arc.

Visual & Physical Direction

- Specific palette remains open.
- Use open, energetic posture and quick movement.
- Design should remain clearly Expie without copying Naki or Blade.
- Expression language should make enthusiasm easy to read.

Personality Architecture

optimistic, excitable, encouraging, curious, social, fast to volunteer, resilient, sometimes oblivious to how intimidating their enthusiasm can be.

WANTS	To make every group event feel worth remembering.
NEEDS	To recognize that “exciting” and “welcome” are not always the same thing.
FEARS	A group becoming so cautious that nobody risks having fun together.
PRESSURE POINT	Being excluded because people assume they will automatically say yes.

Voice & Dialogue Guide

- Exclamation-friendly without every line becoming shouting.
- Rapid idea stacking.
- Genuine compliments.
- Can reframe failures as entertaining data.

- When someone says no clearly, they should be able to respect it.
- Avoid childish speech.

Competencies

Morale • Idea generation • Recruitment • Recovering from failed pranks • Enthusiasm • Making newcomers feel included

Weaknesses, Friction & Failure Modes

- Can escalate too fast
- May volunteer others before asking
- Can miss subtle discomfort
- Optimism may sound minimizing after real harm
- Hates abandoning an idea
- Sometimes assumes everyone shares their energy level

Relationship Dynamics

- Blade: Easy prank collaborator; can amplify his competitive ideas.
- Naki: Sododa's energy can bounce off Naki's restraint for strong comedy.
- Polar: Wonderful contrast: Sododa rushes forward, Polar formalizes everything.
- Raine: Potential maximum-energy pairing.
- Deniy: Sododa may initially find Deniy's extremity exciting until a boundary becomes obvious.

Arc Trajectory

- 1. Enter as pure positive momentum.
- 2. Let an overenthusiastic plan create a small consequence.
- 3. Show that optimism can include accountability rather than denial.
- 4. During Naki/Blade development, Sododa can accidentally create situations that give them time together.
- 5. Long-term: become someone who asks “who’s in?” before assuming everyone is.

Scene-Writing Guide

- Give them verbs: bouncing in, leaning, pointing, volunteering.
- Use their optimism to make failures funny.
- After serious events, let their excitement dim naturally rather than vanish permanently.
- Avoid “sunshine character” flatness; optimism is a choice and a habit.
- They should be capable of sincere apology.
- Keep pronouns consistent.

Continuity Redlines

- They/them.
- Expie.
- Consistently optimistic and excited.
- No supernatural luck.

Story Hooks & Chapter Seeds

- Sododa creates an official prank scoreboard nobody asked for.
- They enthusiastically congratulate Naki on a prank that was obviously for Blade.
- A prank fails completely and Sododa calls it “excellent information.”
- They learn to ask Fear whether she wants in before explaining the plan.
- Sododa is the first person to cheer when Naki and Blade finally stop pretending.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
rooms where silence is allowed	being spoken for
specific compliments	performative concern
being remembered accurately	competence being mistaken for invulnerability
being given useful context	being cornered into instant disclosure
quiet food/drink routines	unearned authority
repair after conflict	people treating boundaries as challenges
objects with personal history	jokes that require a real victim
private creative time	needless ambiguity

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?

- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of being the only person still excited after a line was crossed can make normal optimistic behavior harden into a defense.
- Common mistake: using energetic as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

prank-war ensemble: peer.

Naki/Blade: recurring interaction.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Sododa, keep the central pressure tied to wanting to make everything more fun without making everything about them while actually needing to learn to check whether enthusiasm is shared.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Sododa, keep the central pressure tied to wanting to make everything more fun without making everything about them while actually needing to learn to check whether enthusiasm is shared.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Sododa, keep the central pressure tied to wanting to make everything more fun without making everything about them while actually needing to learn to check whether enthusiasm is shared.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Sododa, keep the central pressure tied to wanting to make everything more fun without making everything about them while actually needing to learn to check whether enthusiasm is shared.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Sododa, keep the central pressure tied to wanting to make everything more fun without making everything about them while actually needing to learn to check whether enthusiasm is shared.
Behavioral proof	Growth is shown through a new action under pressure, not a speech

	claiming they changed. For Sododa, keep the central pressure tied to wanting to make everything more fun without making everything about them while actually needing to learn to check whether enthusiasm is shared.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Sododa, keep the central pressure tied to wanting to make everything more fun without making everything about them while actually needing to learn to check whether enthusiasm is shared.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from optimistic: a pause, look, posture shift, or too-precise question. The second beat comes from excited, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let excited color the interpretation and earnest color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is energetic. The scene becomes interesting when the impulsive part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their earnest trait governs the recalculation; their competitive trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from expressive, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let impulsive color the interpretation and excited color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is friendly. The scene becomes interesting when the earnest part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their competitive trait governs the recalculation; their impulsive trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from resilient: a pause, look, posture shift, or too-precise question. The second beat comes from competitive, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let expressive color the interpretation and expressive color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is optimistic. The scene becomes interesting when the excited part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their excited trait governs the recalculation; their earnest trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from energetic: a pause, look, posture shift, or too-precise question. The second beat comes from impulsive, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let earnest color the interpretation and competitive color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is creative. The scene becomes interesting when the expressive part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their impulsive trait governs the recalculation; their excited trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from friendly: a pause, look, posture shift, or too-precise question. The second beat comes from earnest, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let competitive color the interpretation and impulsive color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is resilient. The scene becomes interesting when the competitive part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their expressive trait governs the recalculation; their expressive trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from optimistic: a pause, look, posture shift, or too-precise question. The second beat comes from excited, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let excited color the interpretation and earnest color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is energetic. The scene becomes interesting when the impulsive part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their earnest trait governs the recalculation; their competitive trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from expressive, which determines whether they approach, deflect, challenge, or wait.

- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let impulsive color the interpretation and excited color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is friendly. The scene becomes interesting when the earnest part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their competitive trait governs the recalculation; their impulsive trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from resilient: a pause, look, posture shift, or too-precise question. The second beat comes from competitive, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let expressive color the interpretation and expressive color the response.

M. Scene Seed Bank

- Give Sododa a scene where being optimistic solves the practical problem but damages a relationship.
- Put Sododa with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Sododa did not know they had.
- Write a low-stakes competition where Sododa's excited side becomes unexpectedly intense.
- Give Sododa information that would help them win an argument but hurt someone if revealed.
- Force Sododa to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Sododa does in the three seconds after realizing it failed.
- Have another character misunderstand Sododa's energetic behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Sododa without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Sododa asks why or pretends not to care.
- Write a scene where Sododa has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Sododa to the single adjective 'optimistic'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: optimistic
02. Secondary trait: excited
03. Contradictory trait: energetic
04. Social pressure trait: earnest
05. Hidden-useful trait: creative
06. Wants to make everything more fun without making everything about them
07. Needs to learn to check whether enthusiasm is shared
08. Core fear cluster: being the only person still excited after a line was crossed
09. Pressure point: momentum can outrun consent
10. Role: optimistic, excited recurring prank-war character
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.

15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: rooms where silence is allowed
22. Likely comfort: specific compliments
23. Likely comfort: being remembered accurately
24. Likely comfort: being given useful context
25. Likely comfort: quiet food/drink routines
26. Likely friction: being spoken for
27. Likely friction: performative concern
28. Likely friction: competence being mistaken for invulnerability
29. Likely friction: being cornered into instant disclosure
30. Likely friction: unearned authority
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

19 Polar

PRANK WAR

PRONOUNS	any/all
SPECIES / TYPE	Expie
AGE	open
STORY ROLE	overly formal, deeply kind prank-war participant

Writing thesis: Polar should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being formal and kind, wanting to participate fully without abandoning their own manner, and needing to accept that silliness and dignity are not opposites.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Polar can use any/all pronouns.
- Polar is an Expie.
- Polar is overly formal in speech and manner and is very kind.
- Polar is a recurring prank-war character.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between formal and kind. The silhouette should communicate how Polar occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'formal' trait readable at rest and the 'kind' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: formal • kind • precise • earnest • polite • competitive • patient • observant • deadpan • methodical

WANTS	participate fully without abandoning their own manner
NEEDS	accept that silliness and dignity are not opposites
FEARS	causing harm through misunderstanding
PRESSURE POINT	formal logic applied to chaotic social games

Internal tension	How to write it
Formal vs. Polite	Both are true. Do not pick one permanently. Under low pressure, formal can dominate; under relational or public pressure, polite may interrupt it, creating behavior that feels inconsistent only from the outside.
Kind vs. Competitive	Both are true. Do not pick one permanently. Under low pressure, kind can dominate; under relational or public pressure, competitive may interrupt it, creating behavior that feels inconsistent only from the outside.
Precise vs. Patient	Both are true. Do not pick one permanently. Under low pressure, precise can dominate; under relational or public pressure, patient may interrupt it, creating behavior that feels inconsistent only from the outside.

Earnest vs. Observant	Both are true. Do not pick one permanently. Under low pressure, earnest can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.
Polite vs. Deadpan	Both are true. Do not pick one permanently. Under low pressure, polite can dominate; under relational or public pressure, deadpan may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their formal side becomes less guarded; they spend less effort managing how they are read and allow earnest behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The kind trait shapes what they notice; polite shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The earnest side becomes more exacting, while patient determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing polite / observant contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through observant; their mistake risk is letting formal justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their deadpan trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their formal trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

109. 1. NOTICE - Polar first filters a situation through formal: what detail feels immediately important?
110. 2. CLASSIFY - the kind side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
111. 3. PROTECT - before choosing an action, they protect a self-image connected to being precise. This is where a flaw can hide inside a virtue.
112. 4. CHOOSE - they select the move most likely to help them participate fully without abandoning their own manner. Under pressure, this short-term goal can conflict with what they actually need: accept that silliness and dignity are not opposites.
113. 5. REVISE - if another person reacts unexpectedly, the earnest trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
114. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Polar from a line with the name tag removed?
- Does the line reflect at least one of: formal, kind, precise - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

PRANK-WAR ARC

Polar treats nonsense with ceremonial seriousness and people with genuine kindness, creating a style of comedy that comes from formality rather than cruelty.

- Polar uses any/all pronouns.
- Polar is an Expie.
- Polar is overly formal in speech and manner.
- Polar is very kind.
- Polar recurs during the prank-war arc.

Visual & Physical Direction

- Specific palette remains open.
- Posture should be unusually formal even in ridiculous situations.
- Clothing can lean tidy or ceremonially neat without becoming a costume joke.
- Gestures may be precise and almost etiquette-like.

Personality Architecture

extremely formal, kind, patient, earnest, courteous, observant, calm, capable of participating in absurdity without dropping decorum.

WANTS To make even chaotic social spaces feel respectful.

NEEDS To learn that informality can also be a form of trust.

FEARS Causing embarrassment or disrespect through carelessness.

PRESSURE POINT Situations where kindness and procedure point in opposite directions.

Voice & Dialogue Guide

- Full sentences.
- Formal address even when discussing pranks.
- Polite requests before outrageous proposals.
- Rarely uses slang unless deliberately experimenting.
- Can make simple affection sound like a diplomatic statement.
- Do not make formality equal stiffness of emotion.

Competencies

De-escalation • Courtesy • Remembering preferences • Making absurd plans sound official • Patience • Conflict mediation

Weaknesses, Friction & Failure Modes

- Can overformalize simple moments
- May make casual friends feel observed
- Sometimes avoids direct emotional language by becoming more formal
- Can take rules too seriously
- Kindness may slow decisive action
- May misunderstand teasing cultures

Relationship Dynamics

- Sododa: Energy/formality contrast.
- Raine: Raine attempts to break Polar's decorum; Polar responds with dignified participation.
- Naki: Naki may appreciate precise language while finding the level of ceremony absurd.
- Blade: Polar can accidentally force romantic clarity by asking overly formal relationship questions.
- Deniy: Polar's kindness meets Deniy's merciless prank streak, creating a natural limits conversation.

Arc Trajectory

- 1. Introduce formality as charming rather than mocking.
- 2. Use the prank war to show Polar willingly participating in nonsense.
- 3. Create a moment where excessive politeness prevents a needed direct “stop.”
- 4. Let Polar become more comfortable with affectionate informality among friends.
- 5. Long-term: keep the formal voice while expanding the emotional range inside it.

Scene-Writing Guide

- Comedy comes from treating silly things seriously.
- Use any/all pronouns naturally across scenes if desired; consistency within a paragraph can help readability.
- Kindness should have boundaries.
- Do not make Polar naive.
- A formal apology can be both funny and sincere.
- Let Polar have preferences and irritation.

Continuity Redlines

- Any/all pronouns.
- Expie.
- Overly formal and very kind.
- No joke should require making kindness stupidity.

Story Hooks & Chapter Seeds

- Polar drafts “rules of engagement” for the prank war.
- They ask Naki and Blade whether their “bilateral alliance has acquired romantic status.”
- Raine gives Polar a ridiculous title and Polar starts signing notes with it.
- Polar formally refuses Deniy's proposed prank as “disproportionate.”
- A sincere thank-you from Polar lands harder because it drops all ceremonial language for one sentence.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
competence without showboating	unearned authority
winning fairly	being cornered into instant disclosure
being remembered accurately	public humiliation
objects with personal history	being spoken for
specific compliments	jokes that require a real victim
unforced physical comfort	consequences being treated as temporary
low-stakes competition	performative concern
people who say what they mean	social tests nobody agreed to

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?

- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of causing harm through misunderstanding can make normal formal behavior harden into a defense.
- Common mistake: using precise as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

prank-war ensemble: peer.

- formality provides comic contrast
- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Polar, keep the central pressure tied to wanting to participate fully without abandoning their own manner while actually needing to accept that silliness and dignity are not opposites.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Polar, keep the central pressure tied to wanting to participate fully without abandoning their own manner while actually needing to accept that silliness and dignity are not opposites.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Polar, keep the central pressure tied to wanting to participate fully without abandoning their own manner while actually needing to accept that silliness and dignity are not opposites.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Polar, keep the central pressure tied to wanting to participate fully without abandoning their own manner while actually needing to accept that silliness and dignity are not opposites.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Polar, keep the central pressure tied to wanting to participate fully without abandoning their own manner while actually needing to accept that silliness and dignity are not opposites.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Polar, keep the central pressure tied to wanting to participate fully without abandoning their own manner while actually needing to accept that silliness and dignity are not opposites.

Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Polar, keep the central pressure tied to wanting to participate fully without abandoning their own manner while actually needing to accept that silliness and dignity are not opposites.
---------------	---

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from formal: a pause, look, posture shift, or too-precise question. The second beat comes from kind, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let kind color the interpretation and earnest color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is precise. The scene becomes interesting when the competitive part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their earnest trait governs the recalculation; their observant trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from polite: a pause, look, posture shift, or too-precise question. The second beat comes from methodical, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let competitive color the interpretation and kind color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is patient. The scene becomes interesting when the earnest part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their competitive trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from deadpan: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let methodical color the interpretation and methodical color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is formal. The scene becomes interesting when the kind part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their kind trait governs the recalculation; their earnest trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from precise: a pause, look, posture shift, or too-precise question. The second beat comes from competitive, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let earnest color the interpretation and observant color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is polite. The scene becomes interesting when the methodical part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their competitive trait governs the recalculation; their kind trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from patient: a pause, look, posture shift, or too-precise question. The second beat comes from earnest, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and competitive color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is deadpan. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their methodical trait governs the recalculation; their methodical trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from formal: a pause, look, posture shift, or too-precise question. The second beat comes from kind, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let kind color the interpretation and earnest color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is precise. The scene becomes interesting when the competitive part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their earnest trait governs the recalculation; their observant trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from polite: a pause, look, posture shift, or too-precise question. The second beat comes from methodical, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let competitive color the interpretation and kind color the response.

27. When a family member makes a decision they hate: Their instinct is to protect their self-image as someone who is patient. The scene becomes interesting when the earnest part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their competitive trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from deadpan: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let methodical color the interpretation and methodical color the response.

M. Scene Seed Bank

- Give Polar a scene where being formal solves the practical problem but damages a relationship.
- Put Polar with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Polar did not know they had.
- Write a low-stakes competition where Polar's kind side becomes unexpectedly intense.
- Give Polar information that would help them win an argument but hurt someone if revealed.
- Force Polar to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Polar does in the three seconds after realizing it failed.
- Have another character misunderstand Polar's precise behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Polar without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Polar asks why or pretends not to care.
- Write a scene where Polar has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Polar to the single adjective 'formal'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: formal
02. Secondary trait: kind
03. Contradictory trait: precise
04. Social pressure trait: earnest
05. Hidden-useful trait: polite
06. Wants to participate fully without abandoning their own manner
07. Needs to accept that silliness and dignity are not opposites
08. Core fear cluster: causing harm through misunderstanding
09. Pressure point: formal logic applied to chaotic social games
10. Role: overly formal, deeply kind prank-war participant
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.

17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: competence without showboating
22. Likely comfort: winning fairly
23. Likely comfort: being remembered accurately
24. Likely comfort: objects with personal history
25. Likely comfort: specific compliments
26. Likely friction: unearned authority
27. Likely friction: being cornered into instant disclosure
28. Likely friction: public humiliation
29. Likely friction: being spoken for
30. Likely friction: jokes that require a real victim
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

20 Redsky

PRANK WAR

PRONOUNS	he/him
SPECIES / TYPE	Albino Expie
AGE	open
STORY ROLE	classy, kind, silly recurring participant

Writing thesis: Redsky should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being classy and kind, wanting to have fun without trading kindness for edge, and needing to let himself be ridiculous without embarrassment.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Redsky is male and uses he/him pronouns.
- He is an Albino Expie.
- He is classy, kind, and silly.
- His prank humor should not rely on humiliating cruelty.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between classy and kind. The silhouette should communicate how Redsky occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'classy' trait readable at rest and the 'kind' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: classy • kind • silly • poised • playful • observant • generous • creative • competitive • gracious

WANTS	have fun without trading kindness for edge
NEEDS	let himself be ridiculous without embarrassment
FEARS	public humiliation or cruelty being mislabeled as humor
PRESSURE POINT	when a prank becomes mean rather than clever

Internal tension	How to write it
Classy vs. Playful	Both are true. Do not pick one permanently. Under low pressure, classy can dominate; under relational or public pressure, playful may interrupt it, creating behavior that feels inconsistent only from the outside.
Kind vs. Observant	Both are true. Do not pick one permanently. Under low pressure, kind can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.
Silly vs. Generous	Both are true. Do not pick one permanently. Under low pressure, silly can dominate; under relational or public pressure, generous may interrupt it, creating behavior that feels inconsistent only from the outside.

Poised vs. Creative	Both are true. Do not pick one permanently. Under low pressure, poised can dominate; under relational or public pressure, creative may interrupt it, creating behavior that feels inconsistent only from the outside.
Playful vs. Competitive	Both are true. Do not pick one permanently. Under low pressure, playful can dominate; under relational or public pressure, competitive may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their classy side becomes less guarded; they spend less effort managing how they are read and allow poised behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The kind trait shapes what they notice; playful shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The poised side becomes more exacting, while generous determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing playful / creative contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through creative; their mistake risk is letting classy justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their competitive trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their classy trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

115. 1. NOTICE - Redsky first filters a situation through classy: what detail feels immediately important?
116. 2. CLASSIFY - the kind side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
117. 3. PROTECT - before choosing an action, they protect a self-image connected to being silly. This is where a flaw can hide inside a virtue.
118. 4. CHOOSE - they select the move most likely to help them have fun without trading kindness for edge. Under pressure, this short-term goal can conflict with what they actually need: let himself be ridiculous without embarrassment.
119. 5. REVISE - if another person reacts unexpectedly, the poised trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
120. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Redsky from a line with the name tag removed?
- Does the line reflect at least one of: classy, kind, silly - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

PRANK-WAR ARC

Redsky combines elegance with silliness: he can look like the most composed person in the room while actively participating in something profoundly unserious.

- Redsky is male and uses he/him pronouns.
- He is an Albino Expie.
- He is classy, kind, and silly.
- He recurs during the prank-war arc.

Visual & Physical Direction

- Albino Expie identity should be clear without using harmful medical stereotypes.
- Favor a clean, elegant silhouette with room for one ridiculous accessory during prank scenes.
- Keep his appearance visually distinct from Polar's formality: Redsky is classy, not necessarily ceremonially formal.
- Silliness should come from action, not making his design inherently a joke.

Personality Architecture

classy, kind, silly, self-possessed, playful, generous, socially graceful, willing to commit to elegant nonsense.

WANTS To make style and fun coexist without either becoming pretentious.

NEEDS To let himself be messy when the situation genuinely is messy.

FEARS Hurting someone while trying to be clever.

PRESSURE POINT A prank that relies on humiliation rather than wit.

Voice & Dialogue Guide

- Smooth, relaxed phrasing.
- Can make ridiculous statements sound sophisticated.
- Compliments people sincerely.
- Humor is often understatement or elaborate presentation.
- Can become blunt when a line is crossed.
- Avoid making him a caricature of wealth/class.

Competencies

Presentation • Social grace • Prank aesthetics • Reading embarrassment • Defusing awkwardness • Turning simple ideas into memorable events

Weaknesses, Friction & Failure Modes

- Can overdesign a plan
- May prioritize elegance over efficiency
- Sometimes avoids messy confrontation
- Can underestimate how serious others are
- Likes the reveal too much
- May hide disappointment behind charm

Relationship Dynamics

- Polar: Classy/formal visual pairing with very different social rhythms.
- Sododa: Sododa supplies energy; Redsky supplies presentation.
- Raine: Raine makes things messier than Redsky planned.
- Blade/Naki: Could become a surprisingly respectful non-teasing observer of their developing romance.
- Deniy: Redsky dislikes pranks that become cruel or disproportionate.

Arc Trajectory

- 1. Establish elegance and silliness simultaneously.
- 2. Let him refuse a mean-spirited prank.
- 3. Give him one plan that fails because it is too elaborate.
- 4. Use kindness to show he cares about aftermath, not just execution.
- 5. Long-term: become comfortable with imperfect fun.

Scene-Writing Guide

- Let him straighten something immediately before doing something ridiculous.
- Use visual contrast between pristine setup and chaotic outcome.
- Do not make albinism a personality trait.
- Give him genuine seriousness when needed.
- His jokes should rarely punch down.
- A ruined outfit can be funny without becoming his only concern.

Continuity Redlines

- Albino Expie.
- Male/he-him.
- Classy, kind, silly.
- No cruelty disguised as sophistication.

Story Hooks & Chapter Seeds

- Redsky stages a prank reveal like a formal unveiling.
- Raine ruins the timing and Redsky has to improvise.
- He quietly removes an embarrassing element from a prank before the target sees it.
- Polar and Redsky argue politely over proper prank etiquette.
- After Ivan-related tension, Redsky is the first prankster to ask whether humor is actually welcome.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
objects with personal history	having motives assigned to them
unforced physical comfort	needless ambiguity
quiet food/drink routines	competence being mistaken for invulnerability
inside jokes that survive context changes	fake apologies
people who say what they mean	consequences being treated as temporary
low-stakes competition	jokes that require a real victim
repair after conflict	being reduced to one trait
winning fairly	performative concern

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?

- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of public humiliation or cruelty being mislabeled as humor can make normal classy behavior harden into a defense.
- Common mistake: using silly as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

prank-war ensemble: peer.

- prefers wit over humiliation
- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Redsky, keep the central pressure tied to wanting to have fun without trading kindness for edge while actually needing to let himself be ridiculous without embarrassment.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Redsky, keep the central pressure tied to wanting to have fun without trading kindness for edge while actually needing to let himself be ridiculous without embarrassment.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Redsky, keep the central pressure tied to wanting to have fun without trading kindness for edge while actually needing to let himself be ridiculous without embarrassment.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Redsky, keep the central pressure tied to wanting to have fun without trading kindness for edge while actually needing to let himself be ridiculous without embarrassment.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Redsky, keep the central pressure tied to wanting to have fun without trading kindness for edge while actually needing to let himself be ridiculous without embarrassment.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Redsky, keep the central pressure tied to wanting to have fun without trading kindness for edge while actually

Residual scar	needing to let himself be ridiculous without embarrassment. Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Redsky, keep the central pressure tied to wanting to have fun without trading kindness for edge while actually needing to let himself be ridiculous without embarrassment.
---------------	---

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from classiness: a pause, look, posture shift, or too-precise question. The second beat comes from kindness, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let kindness color the interpretation and poise color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is silly. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their poise trait governs the recalculation; their creative trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from playfulness: a pause, look, posture shift, or too-precise question. The second beat comes from graciousness, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and kindness color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is generous. The scene becomes interesting when the poise part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their creative trait governs the recalculation; their observant trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from competitiveness: a pause, look, posture shift, or too-precise question. The second beat comes from creativity, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let graciousness color the interpretation and graciousness color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is classy. The scene becomes interesting when the kindness part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their kindness trait governs the recalculation; their poise trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from silliness: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let poise color the interpretation and creativity color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is playful. The scene becomes interesting when the gracious part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their kindness trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from generosity: a pause, look, posture shift, or too-precise question. The second beat comes from poise, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let creativity color the interpretation and observant color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is competitive. The scene becomes interesting when the creativity part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their graciousness trait governs the recalculation; their graciousness trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from classiness: a pause, look, posture shift, or too-precise question. The second beat comes from kindness, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let kindness color the interpretation and poise color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is silly. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their poise trait governs the recalculation; their creative trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from playfulness: a pause, look, posture shift, or too-precise question. The second beat comes from graciousness, which determines whether they approach, deflect, challenge, or wait.

- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and kind color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is generous. The scene becomes interesting when the poised part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their creative trait governs the recalculation; their observant trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from competitive: a pause, look, posture shift, or too-precise question. The second beat comes from creative, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let gracious color the interpretation and gracious color the response.

M. Scene Seed Bank

- Give Redsky a scene where being classy solves the practical problem but damages a relationship.
- Put Redsky with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Redsky did not know they had.
- Write a low-stakes competition where Redsky's kind side becomes unexpectedly intense.
- Give Redsky information that would help them win an argument but hurt someone if revealed.
- Force Redsky to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Redsky does in the three seconds after realizing it failed.
- Have another character misunderstand Redsky's silly behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Redsky without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Redsky asks why or pretends not to care.
- Write a scene where Redsky has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Redsky to the single adjective 'classy'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: classy
02. Secondary trait: kind
03. Contradictory trait: silly
04. Social pressure trait: poised
05. Hidden-useful trait: playful
06. Wants to have fun without trading kindness for edge
07. Needs to let himself be ridiculous without embarrassment
08. Core fear cluster: public humiliation or cruelty being mislabeled as humor
09. Pressure point: when a prank becomes mean rather than clever
10. Role: classy, kind, silly recurring participant
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.

15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: objects with personal history
22. Likely comfort: unforced physical comfort
23. Likely comfort: quiet food/drink routines
24. Likely comfort: inside jokes that survive context changes
25. Likely comfort: people who say what they mean
26. Likely friction: having motives assigned to them
27. Likely friction: needless ambiguity
28. Likely friction: competence being mistaken for invulnerability
29. Likely friction: fake apologies
30. Likely friction: consequences being treated as temporary
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

21 Raine

PRANK WAR

PRONOUNS	he/him
SPECIES / TYPE	Expie
AGE	open
STORY ROLE	goofy propeller-hat chaos agent

Writing thesis: Raine should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being goofy and silly, wanting to turn ordinary moments into bits, and needing to develop a reliable internal stop-sign.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Raine is male and uses he/him pronouns.
- He is an Expie.
- He wears a propeller hat.
- He is goofy and silly.
- The propeller hat is an ordinary accessory, not a magical device.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between goofy and silly. The silhouette should communicate how Raine occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'goofy' trait readable at rest and the 'silly' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: goofy • silly • improvisational • energetic • creative • reckless • affectionate • competitive • curious • resilient

WANTS	turn ordinary moments into bits
NEEDS	develop a reliable internal stop-sign
FEARS	hurting someone while trying to be funny
PRESSURE POINT	escalation becomes self-reinforcing

Internal tension	How to write it
Goofy vs. Creative	Both are true. Do not pick one permanently. Under low pressure, goofy can dominate; under relational or public pressure, creative may interrupt it, creating behavior that feels inconsistent only from the outside.
Silly vs. Reckless	Both are true. Do not pick one permanently. Under low pressure, silly can dominate; under relational or public pressure, reckless may interrupt it, creating behavior that feels inconsistent only from the outside.
Improvisational vs. Affectionate	Both are true. Do not pick one permanently. Under low pressure, improvisational can dominate; under relational or public pressure, affectionate may interrupt it, creating behavior that feels inconsistent only from the outside.

Energetic vs. Competitive	Both are true. Do not pick one permanently. Under low pressure, energetic can dominate; under relational or public pressure, competitive may interrupt it, creating behavior that feels inconsistent only from the outside.
Creative vs. Curious	Both are true. Do not pick one permanently. Under low pressure, creative can dominate; under relational or public pressure, curious may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their goofy side becomes less guarded; they spend less effort managing how they are read and allow energetic behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The silly trait shapes what they notice; creative shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The energetic side becomes more exacting, while affectionate determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing creative / competitive contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through competitive; their mistake risk is letting goofy justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their curious trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their goofy trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

121. 1. NOTICE - Raine first filters a situation through goofy: what detail feels immediately important?
122. 2. CLASSIFY - the silly side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
123. 3. PROTECT - before choosing an action, they protect a self-image connected to being improvisational. This is where a flaw can hide inside a virtue.
124. 4. CHOOSE - they select the move most likely to help them turn ordinary moments into bits. Under pressure, this short-term goal can conflict with what they actually need: develop a reliable internal stop-sign.
125. 5. REVISE - if another person reacts unexpectedly, the energetic trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
126. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Raine from a line with the name tag removed?
- Does the line reflect at least one of: goofy, silly, improvisational - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

PRANK-WAR ARC

Raine is visual comedy with momentum: a propeller hat, a willingness to look ridiculous, and enough genuine warmth that his chaos feels invited rather than malicious.

- Raine is male and uses he/him pronouns.
- Raine is an Expie.
- Raine wears a propeller hat.
- Raine is goofy and silly.
- He recurs during the prank-war arc.

Visual & Physical Direction

- The propeller hat is the locked signature item.
- Keep the rest of the design readable enough that the hat remains a deliberate focal point.
- Movement can be bouncy, quick, and physically committed.
- Do not make the hat magical or functional beyond ordinary propeller-hat logic unless later canon says so.

Personality Architecture

goofy, silly, bold, friendly, easily amused, inventive, kinetic, willing to be the joke, occasionally reckless.

WANTS To make people laugh and create stories the group retells later.

NEEDS To notice when a memorable story is becoming someone else's bad memory.

FEARS Being tolerated rather than genuinely wanted around.

PRESSURE POINT A joke landing in total silence.

Voice & Dialogue Guide

- Casual, playful, fast.
- Commits to dumb premises with confidence.
- Can narrate his own terrible ideas as if they are brilliant.
- Apologies should be plain when needed.
- Does not need random noises every line.
- Can become surprisingly sincere when worried he hurt someone.

Competencies

Physical comedy • Prank improvisation • Prop use • Recovering from embarrassment • Making Joel worse in a funny way • Keeping group energy moving

Weaknesses, Friction & Failure Modes

- Reckless
- Can ignore practical setup
- Loves escalation
- May assume everyone understands the joke
- Can chase a laugh too long
- Embarrassment may make him double down before apologizing

Relationship Dynamics

- Joel: Extremely high-chaos pairing; each can dare the other into bigger ideas.
- Sododa: Mutual enthusiasm.
- Polar: Raine tries to break decorum; Polar often responds with formal cooperation.
- Redsky: Raine ruins elegant plans in ways that become funnier.
- Deniy: Raine may think Deniy's ideas are funny until he realizes “merciless” is not always playful.

Arc Trajectory

- 1. Enter with a memorable propeller-hat bit.
- 2. Become a major prank collaborator.
- 3. Cross a small boundary and repair it honestly.
- 4. Show he can choose someone's comfort over the laugh.
- 5. Long-term: stay ridiculous while becoming more trustworthy.

Scene-Writing Guide

- Use the hat in blocking but do not mention it every paragraph.
- Let him fail spectacularly.
- Give him competence in humor without making him a genius mastermind.
- Pair with Joel sparingly so the story remains readable.
- A serious Raine should feel striking.
- No prank should depend on permanent harm.

Continuity Redlines

- Propeller hat stays.
- Male/he-him Expie.
- Goofy and silly.
- No magical flying hat.

Story Hooks & Chapter Seeds

- Raine builds a prank whose entire mechanism is defeated by a low doorway.
- Joel and Raine have to be separated during planning.
- Polar politely compliments the propeller hat and Raine is genuinely touched.
- A failed prank ends with Raine apologizing before anyone asks him to.
- Raine realizes Naki and Blade are flirting and becomes physically incapable of acting normal about it.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
rooms where silence is allowed	being cornered into instant disclosure
winning fairly	carelessness with private information
low-stakes competition	jokes that require a real victim
clever solutions	consequences being treated as temporary
unforced physical comfort	public humiliation
inside jokes that survive context changes	people treating boundaries as challenges
objects with personal history	fake apologies
repair after conflict	social tests nobody agreed to

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?

- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of hurting someone while trying to be funny can make normal goofy behavior harden into a defense.
- Common mistake: using improvisational as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

prank-war ensemble: peer.

- propeller hat is ordinary accessory
- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Raine, keep the central pressure tied to wanting to turn ordinary moments into bits while actually needing to develop a reliable internal stop-sign.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Raine, keep the central pressure tied to wanting to turn ordinary moments into bits while actually needing to develop a reliable internal stop-sign.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Raine, keep the central pressure tied to wanting to turn ordinary moments into bits while actually needing to develop a reliable internal stop-sign.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Raine, keep the central pressure tied to wanting to turn ordinary moments into bits while actually needing to develop a reliable internal stop-sign.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Raine, keep the central pressure tied to wanting to turn ordinary moments into bits while actually needing to develop a reliable internal stop-sign.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Raine, keep the central pressure tied to wanting to turn ordinary moments into bits while actually needing to develop a reliable internal stop-sign.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Raine, keep the central

pressure tied to wanting to turn ordinary moments into bits while actually needing to develop a reliable internal stop-sign.
--

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from goofy: a pause, look, posture shift, or too-precise question. The second beat comes from silly, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let silly color the interpretation and energetic color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is improvisational. The scene becomes interesting when the reckless part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their energetic trait governs the recalculation; their competitive trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from resilient, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let reckless color the interpretation and silly color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is affectionate. The scene becomes interesting when the energetic part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their competitive trait governs the recalculation; their reckless trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from curious: a pause, look, posture shift, or too-precise question. The second beat comes from competitive, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let resilient color the interpretation and resilient color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is goofy. The scene becomes interesting when the silly part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their silly trait governs the recalculation; their energetic trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from improvisational: a pause, look, posture shift, or too-precise question. The second beat comes from reckless, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let energetic color the interpretation and competitive color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is creative. The scene becomes interesting when the resilient part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their reckless trait governs the recalculation; their silly trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from affectionate: a pause, look, posture shift, or too-precise question. The second beat comes from energetic, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let competitive color the interpretation and reckless color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is curious. The scene becomes interesting when the competitive part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their resilient trait governs the recalculation; their resilient trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from goofy: a pause, look, posture shift, or too-precise question. The second beat comes from silly, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let silly color the interpretation and energetic color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is improvisational. The scene becomes interesting when the reckless part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their energetic trait governs the recalculation; their competitive trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from resilient, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let reckless color the interpretation and silly color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is affectionate. The scene becomes interesting when the energetic part of them pushes in the opposite direction.

28. When they are forced to wait for information: Use a two-step reaction: internal recalculation, then social choice. Their competitive trait governs the recalculation; their reckless trait governs what other people actually get to see.

29. When they have to tell a painful truth: The first visible tell should come from curious: a pause, look, posture shift, or too-precise question. The second beat comes from competitive, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let resilient color the interpretation and resilient color the response.

M. Scene Seed Bank

- Give Raine a scene where being goofy solves the practical problem but damages a relationship.
- Put Raine with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Raine did not know they had.
- Write a low-stakes competition where Raine's silly side becomes unexpectedly intense.
- Give Raine information that would help them win an argument but hurt someone if revealed.
- Force Raine to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Raine does in the three seconds after realizing it failed.
- Have another character misunderstand Raine's improvisational behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Raine without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Raine asks why or pretends not to care.
- Write a scene where Raine has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Raine to the single adjective 'goofy'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: goofy
02. Secondary trait: silly
03. Contradictory trait: improvisational
04. Social pressure trait: energetic
05. Hidden-useful trait: creative
06. Wants to turn ordinary moments into bits
07. Needs to develop a reliable internal stop-sign
08. Core fear cluster: hurting someone while trying to be funny
09. Pressure point: escalation becomes self-reinforcing
10. Role: goofy propeller-hat chaos agent
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.

19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: rooms where silence is allowed
22. Likely comfort: winning fairly
23. Likely comfort: low-stakes competition
24. Likely comfort: clever solutions
25. Likely comfort: unforced physical comfort
26. Likely friction: being cornered into instant disclosure
27. Likely friction: carelessness with private information
28. Likely friction: jokes that require a real victim
29. Likely friction: consequences being treated as temporary
30. Likely friction: public humiliation
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

22 Deniy

PRANK WAR

PRONOUNS

he/him

SPECIES / TYPE

uncertain Expie classification

AGE

open

STORY ROLE

four-eyed dark figure with purple eyes/gold markings; chaotic merciless edge

Writing thesis: Deniy should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being chaotic and merciless, wanting to win the psychological game and stay impossible to predict, and needing to distinguish performance from genuine distress and accept repair.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Deniy is male and uses he/him pronouns.
- His exact Expie classification is uncertain.
- He has four eyes, a very dark/black appearance, vivid purple eyes, and yellow-gold markings.
- He is chaotic and merciless in the prank-war social sense.
- Vesta is his girlfriend.
- When Deniy experiences genuine distress, it is never treated as a prank; private despair is not a punchline.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Four vivid purple eyes against a near-black body and yellow-gold markings create the strongest focal hierarchy. Do not clutter the face with extra unrelated anatomy; the four-eye arrangement should feel intentional and expressive.

- Primary silhouette rule: body language should make the 'chaotic' trait readable at rest and the 'merciless' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: chaotic • merciless • clever • provocative • competitive • unpredictable • observant • intense • funny • daring

WANTS

win the psychological game and stay impossible to predict

NEEDS

distinguish performance from genuine distress and accept repair

FEARS

losing control of how others read him; real private despair being mistaken for another bit

PRESSURE POINT

when actual distress collides with a reputation for chaos

Internal tension	How to write it
Chaotic vs. Competitive	Both are true. Do not pick one permanently. Under low pressure, chaotic can dominate; under relational or public pressure, competitive may interrupt it, creating behavior that feels inconsistent only from the outside.
Merciless vs. Unpredictable	Both are true. Do not pick one permanently. Under low pressure, merciless can dominate; under relational or public pressure, unpredictable may interrupt it, creating behavior that feels inconsistent only from the outside.

Clever vs. Observant	Both are true. Do not pick one permanently. Under low pressure, clever can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.
Provocative vs. Intense	Both are true. Do not pick one permanently. Under low pressure, provocative can dominate; under relational or public pressure, intense may interrupt it, creating behavior that feels inconsistent only from the outside.
Competitive vs. Funny	Both are true. Do not pick one permanently. Under low pressure, competitive can dominate; under relational or public pressure, funny may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their chaotic side becomes less guarded; they spend less effort managing how they are read and allow provocative behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The merciless trait shapes what they notice; competitive shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The provocative side becomes more exacting, while observant determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing competitive / intense contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through intense; their mistake risk is letting chaotic justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their funny trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their chaotic trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

127. 1. NOTICE - Deniy first filters a situation through chaotic: what detail feels immediately important?
128. 2. CLASSIFY - the merciless side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
129. 3. PROTECT - before choosing an action, they protect a self-image connected to being clever. This is where a flaw can hide inside a virtue.
130. 4. CHOOSE - they select the move most likely to help them win the psychological game and stay impossible to predict. Under pressure, this short-term goal can conflict with what they actually need: distinguish performance from genuine distress and accept repair.
131. 5. REVISE - if another person reacts unexpectedly, the provocative trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
132. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Deniy from a line with the name tag removed?
- Does the line reflect at least one of: chaotic, merciless, clever - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

PRANK-WAR ARC

Deniy should feel like the person who turns “how far could we take this?” from a joke into a real design problem for the rest of the prank-war cast.

- Deniy is male and uses he/him pronouns.
- His Expie classification is uncertain.
- He has four eyes.
- He has a very dark/black overall appearance with vivid purple eyes and yellow-gold markings.
- He is chaotic and merciless.
- He recurs during the prank-war arc.

Visual & Physical Direction

- Four eyes are a locked, high-priority facial feature.
- Keep the body/overall palette extremely dark or black so the vivid purple eyes and yellow-gold markings read sharply.
- Gold markings should feel intentional and patterned rather than random noise.
- Use all four eyes in expression design - synchronized focus can be intense; different focus directions can be uncanny or comedic.
- Do not add unrelated extra body parts beyond established design needs.

Personality Architecture

chaotic, merciless in competition/prank contexts, fearless, unpredictable, clever, amused by escalation, hard to intimidate, tests limits, more observant than his chaos implies.

WANTS To find the actual edge of a game rather than obeying the edge everyone merely assumes.

NEEDS To learn that a boundary does not become more interesting

just because someone else has to enforce it.

FEARS

Boredom, predictability, and being controlled by rules

nobody can justify.

PRESSURE POINT

Being told “because I said so” without a reason.

Voice & Dialogue Guide

- Confident.
- Treats escalation as a puzzle.
- Can be unnervingly matter-of-fact about extreme prank ideas.
- Humor can be dry or gleefully blunt.
- Respects a well-argued limit more than a vague warning.
- Avoid making him randomly violent outside the context established by canon.

Competencies

Prank engineering • Finding loopholes • Reading rule structures • Intimidating commitment to a bit • Improvisation • Spotting what others are unwilling to do

Weaknesses, Friction & Failure Modes

- Pushes limits
- Merciless competitive instinct
- Can mistake discomfort for part of the game
- Hates arbitrary rules
- May escalate before checking consent
- Can make repair harder by joking about consequences

Relationship Dynamics

- Blade: Useful foil: Deniy forces Blade to define what he will not do even when winning is tempting.
- Naki: Naki is likely to scrutinize Deniy's plans for hidden consequences.
- Polar: Polar's kindness/formality creates a natural boundary negotiation.
- Redsky: Redsky rejects humiliation-based pranks; Deniy may find that distinction interesting.
- Raine: Raine can be pulled toward Deniy's escalation before realizing the practical risk.
- Sododa: Sododa's enthusiasm is easy to recruit, which makes Deniy responsible for how he uses that trust.

Arc Trajectory

- 1. Introduce his striking design and extreme prank logic.
- 2. Let the group enjoy his creativity before a real limit becomes necessary.
- 3. Force a conflict where “merciless” stops being funny to someone.
- 4. Give Deniy a chance to respect a clearly stated boundary rather than making him irredeemable.
- 5. Long-term: keep the edge while making consent/limits part of the game he is clever enough to understand.

Scene-Writing Guide

- Use four-eye focus to make attention feel intense.
- Gold/purple contrast should remain readable in dark scenes.
- Do not turn him into a supernatural horror creature just because the design is striking.
- His chaos should have intelligence behind it.
- Let someone say no and have that matter.
- Merciless can mean relentless competition, not gratuitous harm.

Continuity Redlines

- Four eyes; dark/black body; vivid purple eyes; yellow-gold markings.
- Male/he-him.
- Expie classification remains uncertain.
- Chaotic and merciless, but do not automatically convert this into homicidal behavior.

Story Hooks & Chapter Seeds

- Deniy proposes a prank so elaborate everyone assumes he is joking - he is not.
- Blade is the first person to give him a specific, reasoned limit.
- Polar writes a boundary list and Deniy treats it like the rules of a challenge.
- Redsky rejects one humiliating element and Deniy replaces it with something cleverer.
- Naki realizes Deniy follows clearly stated rules more reliably than vague social expectations.

APPENDIX A • VOICE CHEAT SHEET CHARACTER

VOICE SHORTHAND

Naki	Concise, dry, precise; more literal under stress; warmer/teasing with Blade.
Mako	Measured, analytical, understated; anger becomes quieter and more controlled.
Doc	Clear instructions, practical questions, dry post-crisis sarcasm.

Scarf	Quick, socially agile, willing to say the awkward thing first.
Ivan	Ordinary when possible; defensive and justificatory when challenged.
Emily	Formal, narrow questions, controlled pauses, strategic wording.
Blade	Playful and competitive; sincere directness appears when the joke stops protecting him.
Markov	Casual sibling sarcasm; direct when autonomy is at stake.
Amy	Direct, teasing, information-seeking; refuses babying.
Isaac	Plainspoken, calm, concrete; firm about boundaries.
James	Familiar shorthand and wry private confrontation.
Fear	Clear, specific, direct; no robotic autism stereotype.
Zucchi	Visual specificity, creative observations, occasional indirectness through art.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
inside jokes that survive context changes	being reduced to one trait
being remembered accurately	being cornered into instant disclosure
specific compliments	social tests nobody agreed to
private creative time	needless ambiguity
objects with personal history	performative concern
unforced physical comfort	competence being mistaken for invulnerability
repair after conflict	carelessness with private information
clever solutions	unearned authority

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of losing control of how others read him; real private despair being mistaken for another bit can make normal chaotic behavior harden into a defense.
- Common mistake: using clever as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Vesta: girlfriend.

prank-war ensemble: peer.

- real distress is never a prank
- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?

- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Deniy, keep the central pressure tied to wanting to win the psychological game and stay impossible to predict while actually needing to distinguish performance from genuine distress and accept repair.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Deniy, keep the central pressure tied to wanting to win the psychological game and stay impossible to predict while actually needing to distinguish performance from genuine distress and accept repair.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Deniy, keep the central pressure tied to wanting to win the psychological game and stay impossible to predict while actually needing to distinguish performance from genuine distress and accept repair.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Deniy, keep the central pressure tied to wanting to win the psychological game and stay impossible to predict while actually needing to distinguish performance from genuine distress and accept repair.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Deniy, keep the central pressure tied to wanting to win the psychological game and stay impossible to predict while actually needing to distinguish performance from genuine distress and accept repair.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Deniy, keep the central pressure tied to wanting to win the psychological game and stay impossible to predict while actually needing to distinguish performance from genuine distress and accept repair.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Deniy, keep the central pressure tied to wanting to win the psychological game and stay impossible to predict while actually needing to distinguish performance from genuine distress and accept repair.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

01. When someone enters the room unexpectedly: The first visible tell should come from chaotic: a pause, look, posture shift, or too-precise question. The second beat comes from merciless, which determines whether they approach, deflect, challenge, or wait.

02. When a joke lands much harder than intended: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let merciless color the interpretation and provocative color the response.

03. When a friend stops replying: Their instinct is to protect their self-image as someone who is clever. The scene becomes interesting when the unpredictable part of them pushes in the opposite direction.

04. When they are accused of something unfairly: Use a two-step reaction: internal recalculation, then social choice. Their provocative trait governs the recalculation; their intense trait governs what other people actually get to see.

05. When someone gives them sincere praise: The first visible tell should come from competitive: a pause, look, posture shift, or too-precise question. The second beat comes from daring, which determines whether they approach, deflect, challenge, or wait.

06. When the group starts arguing over a trivial detail: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let unpredictable color the interpretation and merciless color the response.

07. When a plan fails in public: Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the provocative part of them pushes in the opposite direction.

08. When they see someone they care about injured: Use a two-step reaction: internal recalculation, then social choice. Their intense trait governs the recalculation; their unpredictable trait governs what other people actually get to see.

09. When a private detail becomes public: The first visible tell should come from funny: a pause, look, posture shift, or too-precise question. The second beat comes from intense, which determines whether they approach, deflect, challenge, or wait.

10. When they realize they misunderstood the situation: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let daring color the interpretation and daring color the response.

- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is chaotic. The scene becomes interesting when the merciless part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their merciless trait governs the recalculation; their provocative trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from clever: a pause, look, posture shift, or too-precise question. The second beat comes from unpredictable, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let provocative color the interpretation and intense color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is competitive. The scene becomes interesting when the daring part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their unpredictable trait governs the recalculation; their merciless trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from provocative, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let intense color the interpretation and unpredictable color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is funny. The scene becomes interesting when the intense part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their daring trait governs the recalculation; their daring trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from chaotic: a pause, look, posture shift, or too-precise question. The second beat comes from merciless, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let merciless color the interpretation and provocative color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is clever. The scene becomes interesting when the unpredictable part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their provocative trait governs the recalculation; their intense trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from competitive: a pause, look, posture shift, or too-precise question. The second beat comes from daring, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let unpredictable color the interpretation and merciless color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the provocative part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their intense trait governs the recalculation; their unpredictable trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from funny: a pause, look, posture shift, or too-precise question. The second beat comes from intense, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let daring color the interpretation and daring color the response.

M. Scene Seed Bank

- Give Deniy a scene where being chaotic solves the practical problem but damages a relationship.
- Put Deniy with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Deniy did not know they had.
- Write a low-stakes competition where Deniy's merciless side becomes unexpectedly intense.
- Give Deniy information that would help them win an argument but hurt someone if revealed.
- Force Deniy to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Deniy does in the three seconds after realizing it failed.
- Have another character misunderstand Deniy's clever behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Deniy without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Deniy asks why or pretends not to care.
- Write a scene where Deniy has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.

- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Deniy to the single adjective 'chaotic'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.
- Do not treat genuine despair or self-destructive thoughts as a prank, punchline, or test of whether friends 'get the bit'.

O. 50-Point Quick Reference

01. Primary trait: chaotic
02. Secondary trait: merciless
03. Contradictory trait: clever
04. Social pressure trait: provocative
05. Hidden-useful trait: competitive
06. Wants to win the psychological game and stay impossible to predict
07. Needs to distinguish performance from genuine distress and accept repair
08. Core fear cluster: losing control of how others read him; real private despair being mistaken for another bit
09. Pressure point: when actual distress collides with a reputation for chaos
10. Role: four-eyed dark figure with purple eyes/gold markings; chaotic merciless edge
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: inside jokes that survive context changes
22. Likely comfort: being remembered accurately
23. Likely comfort: specific compliments
24. Likely comfort: private creative time
25. Likely comfort: objects with personal history
26. Likely friction: being reduced to one trait
27. Likely friction: being cornered into instant disclosure
28. Likely friction: social tests nobody agreed to
29. Likely friction: needless ambiguity
30. Likely friction: performative concern
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.

- 43. Let flaws sometimes be useful.
- 44. Let virtues sometimes cause damage when overused.
- 45. Do not over-explain species traits in ordinary scenes.
- 46. Do not flatten relationship chemistry into constant flirting.
- 47. Do not make every emotional scene a confession.
- 48. Do not make every conflict a screaming match.
- 49. Do not make every repair immediate.
- 50. Open Fields remain open until canon changes.

23 Grotti

PRANK WAR / FRIENDS

PRONOUNS	they/them
SPECIES / TYPE	Expie
AGE	open
STORY ROLE	red-eyed contradiction engine; newest recurring ensemble addition

Writing thesis: Grotti should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being silly and serious, wanting to be impossible to flatten into one social role, and needing to let people see when the serious side is sincere.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Grotti uses they/them pronouns.
- Grotti is an Expie with striking red eyes.
- Their established personality intentionally contains contradictions: silly, serious, dumb, and intelligent.
- They are a newest recurring addition to the social/prank-war ensemble.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Red eyes are the locked focal point. Expansion can lean into visual contradiction - a design that can read ridiculous in one pose and unnervingly analytical in another - without changing species or inventing powers.

- Primary silhouette rule: body language should make the 'silly' trait readable at rest and the 'serious' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: silly • serious • dumb • intelligent • contradictory • analytical • impulsive • deadpan • creative • unpredictable

WANTS	be impossible to flatten into one social role
NEEDS	let people see when the serious side is sincere
FEARS	being treated as either idiot or mastermind exclusively
PRESSURE POINT	people assume every contradiction is a trick

Internal tension	How to write it
Silly vs. Contradictory	Both are true. Do not pick one permanently. Under low pressure, silly can dominate; under relational or public pressure, contradictory may interrupt it, creating behavior that feels inconsistent only from the outside.
Serious vs. Analytical	Both are true. Do not pick one permanently. Under low pressure, serious can dominate; under relational or public pressure, analytical may interrupt it, creating behavior that feels inconsistent only from the outside.
Dumb vs. Impulsive	Both are true. Do not pick one permanently. Under low pressure, dumb can dominate; under relational or public pressure, impulsive may interrupt it, creating behavior that feels inconsistent only from the outside.

	outside.
Intelligent vs. Deadpan	Both are true. Do not pick one permanently. Under low pressure, intelligent can dominate; under relational or public pressure, deadpan may interrupt it, creating behavior that feels inconsistent only from the outside.
Contradictory vs. Creative	Both are true. Do not pick one permanently. Under low pressure, contradictory can dominate; under relational or public pressure, creative may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their silly side becomes less guarded; they spend less effort managing how they are read and allow intelligent behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The serious trait shapes what they notice; contradictory shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The intelligent side becomes more exacting, while impulsive determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing contradictory / deadpan contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through deadpan; their mistake risk is letting silly justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their creative trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their silly trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

133. 1. NOTICE - Grotti first filters a situation through silly: what detail feels immediately important?
134. 2. CLASSIFY - the serious side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
135. 3. PROTECT - before choosing an action, they protect a self-image connected to being dumb. This is where a flaw can hide inside a virtue.
136. 4. CHOOSE - they select the move most likely to help them be impossible to flatten into one social role. Under pressure, this short-term goal can conflict with what they actually need: let people see when the serious side is sincere.
137. 5. REVISE - if another person reacts unexpectedly, the intelligent trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
138. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Grotti from a line with the name tag removed?
- Does the line reflect at least one of: silly, serious, dumb - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
inside jokes that survive context changes	being reduced to one trait
specific compliments	having motives assigned to them
quiet food/drink routines	being spoken for
private creative time	social tests nobody agreed to
being given useful context	public humiliation
unforced physical comfort	performative concern
people who say what they mean	being cornered into instant disclosure
competence without showboating	consequences being treated as temporary

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of being treated as either idiot or mastermind exclusively can make normal silly behavior harden into a defense.
- Common mistake: using dumb as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.

- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

prank-war ensemble: peer.

- strong potential for false clues and social misdirection
- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Grotti, keep the central pressure tied to wanting to be impossible to flatten into one social role while actually needing to let people see when the serious side is sincere.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Grotti, keep the central pressure tied to wanting to be impossible to flatten into one social role while actually needing to let people see when the serious side is sincere.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Grotti, keep the central pressure tied to wanting to be impossible to flatten into one social role while actually needing to let people see when the serious side is sincere.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Grotti, keep the central pressure tied to wanting to be impossible to flatten into one social role while actually needing to let people see when the serious side is sincere.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Grotti, keep the central pressure tied to wanting to be impossible to flatten into one social role while actually needing to let people see when the serious side is sincere.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Grotti, keep the central pressure tied to wanting to be impossible to flatten into one social role while actually needing to let people see when the serious side is sincere.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Grotti, keep the central pressure tied to wanting to be impossible to flatten into one social role while actually needing to let people see when the serious side is sincere.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

01. When someone enters the room unexpectedly: The first visible tell should come from silly: a pause, look, posture shift, or too-precise question. The second beat comes from serious, which determines whether they approach, deflect, challenge, or wait.

02. When a joke lands much harder than intended: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let serious color the interpretation and intelligent color the response.

03. When a friend stops replying: Their instinct is to protect their self-image as someone who is dumb. The scene becomes interesting when the analytical part of them pushes in the opposite direction.

04. When they are accused of something unfairly: Use a two-step reaction: internal recalculation, then social choice. Their intelligent trait governs the recalculation; their deadpan trait governs what other people actually get to see.

- 05. When someone gives them sincere praise:** The first visible tell should come from contradictory: a pause, look, posture shift, or too-precise question. The second beat comes from unpredictable, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let analytical color the interpretation and serious color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is impulsive. The scene becomes interesting when the intelligent part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their deadpan trait governs the recalculation; their analytical trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from deadpan, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let unpredictable color the interpretation and unpredictable color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is silly. The scene becomes interesting when the serious part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their serious trait governs the recalculation; their intelligent trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from dumb: a pause, look, posture shift, or too-precise question. The second beat comes from analytical, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let intelligent color the interpretation and deadpan color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is contradictory. The scene becomes interesting when the unpredictable part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their analytical trait governs the recalculation; their serious trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from impulsive: a pause, look, posture shift, or too-precise question. The second beat comes from intelligent, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let deadpan color the interpretation and analytical color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is creative. The scene becomes interesting when the deadpan part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their unpredictable trait governs the recalculation; their unpredictable trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from silly: a pause, look, posture shift, or too-precise question. The second beat comes from serious, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let serious color the interpretation and intelligent color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is dumb. The scene becomes interesting when the analytical part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their intelligent trait governs the recalculation; their deadpan trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from contradictory: a pause, look, posture shift, or too-precise question. The second beat comes from unpredictable, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let analytical color the interpretation and serious color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is impulsive. The scene becomes interesting when the intelligent part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their deadpan trait governs the recalculation; their analytical trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from creative: a pause, look, posture shift, or too-precise question. The second beat comes from deadpan, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let unpredictable color the interpretation and unpredictable color the response.

M. Scene Seed Bank

- Give Grotti a scene where being silly solves the practical problem but damages a relationship.
- Put Grotti with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Grotti did not know they had.
- Write a low-stakes competition where Grotti's serious side becomes unexpectedly intense.
- Give Grotti information that would help them win an argument but hurt someone if revealed.

- Force Grotti to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Grotti does in the three seconds after realizing it failed.
- Have another character misunderstand Grotti's dumb behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Grotti without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Grotti asks why or pretends not to care.
- Write a scene where Grotti has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Grotti to the single adjective 'silly'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.

O. 50-Point Quick Reference

01. Primary trait: silly
02. Secondary trait: serious
03. Contradictory trait: dumb
04. Social pressure trait: intelligent
05. Hidden-useful trait: contradictory
06. Wants to be impossible to flatten into one social role
07. Needs to let people see when the serious side is sincere
08. Core fear cluster: being treated as either idiot or mastermind exclusively
09. Pressure point: people assume every contradiction is a trick
10. Role: red-eyed contradiction engine; newest recurring ensemble addition
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: inside jokes that survive context changes
22. Likely comfort: specific compliments
23. Likely comfort: quiet food/drink routines
24. Likely comfort: private creative time
25. Likely comfort: being given useful context
26. Likely friction: being reduced to one trait
27. Likely friction: having motives assigned to them
28. Likely friction: being spoken for
29. Likely friction: social tests nobody agreed to
30. Likely friction: public humiliation
31. Track who they look at first in a group scene.

32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

24 Vesta

PRANK WAR / FRIENDS

PRONOUNS	she/her
SPECIES / TYPE	Velvet
AGE	open
STORY ROLE	Deniy's girlfriend; poised counterweight with independent agency

Writing thesis: Vesta should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being poised and composed, wanting to be recognized as a full strategist rather than an accessory to Deniy, and needing to state her own limits before becoming the room's quiet manager.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Vesta uses she/her pronouns.
- Vesta is a Velvet.
- Vesta is Deniy's girlfriend.
- Her exact visual design and deeper personality details beyond those facts remain expandable unless separately locked.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Expansion direction: a sleek, soft-coated Velvet silhouette with strong composure and clean shapes. Dark body tones with vivid red markings, a long heavy tail, and elegant posture fit the current concept, but these specifics remain Bible Expansion rather than Locked Canon unless later confirmed.

- Primary silhouette rule: body language should make the 'poised' trait readable at rest and the 'composed' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: poised • composed • warm • considerate • strategic • elegant • observant • patient • dangerous-when-needed • independent

WANTS	be recognized as a full strategist rather than an accessory to Deniy
NEEDS	state her own limits before becoming the room's quiet manager
FEARS	being underestimated because she is calm or relationally introduced
PRESSURE POINT	Deniy's chaos can make people overlook her choices

Internal tension	How to write it
Poised vs. Strategic	Both are true. Do not pick one permanently. Under low pressure, poised can dominate; under relational or public pressure, strategic may interrupt it, creating behavior that feels inconsistent only from the outside.
Composed vs. Elegant	Both are true. Do not pick one permanently. Under low pressure, composed can dominate; under relational or public pressure, elegant may interrupt it, creating behavior that feels inconsistent only from the outside.

Warm vs. Observant	Both are true. Do not pick one permanently. Under low pressure, warm can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the outside.
Considerate vs. Patient	Both are true. Do not pick one permanently. Under low pressure, considerate can dominate; under relational or public pressure, patient may interrupt it, creating behavior that feels inconsistent only from the outside.
Strategic vs. Dangerous-When-Needed	Both are true. Do not pick one permanently. Under low pressure, strategic can dominate; under relational or public pressure, dangerous-when-needed may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their poised side becomes less guarded; they spend less effort managing how they are read and allow considerate behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The composed trait shapes what they notice; strategic shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The considerate side becomes more exacting, while observant determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing strategic / patient contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through patient; their mistake risk is letting poised justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their dangerous-when-needed trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their poised trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

139. 1. NOTICE - Vesta first filters a situation through poised: what detail feels immediately important?
140. 2. CLASSIFY - the composed side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
141. 3. PROTECT - before choosing an action, they protect a self-image connected to being warm. This is where a flaw can hide inside a virtue.
142. 4. CHOOSE - they select the move most likely to help them be recognized as a full strategist rather than an accessory to Deniy. Under pressure, this short-term goal can conflict with what they actually need: state her own limits before becoming the room's quiet manager.
143. 5. REVISE - if another person reacts unexpectedly, the considerate trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
144. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Vesta from a line with the name tag removed?
- Does the line reflect at least one of: poised, composed, warm - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
clever solutions	carelessness with private information
repair after conflict	being spoken for
objects with personal history	consequences being treated as temporary
competence without showboating	needless ambiguity
quiet food/drink routines	unearned authority
being given useful context	jokes that require a real victim
inside jokes that survive context changes	being reduced to one trait
low-stakes competition	being cornered into instant disclosure

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of being underestimated because she is calm or relationally introduced can make normal poised behavior harden into a defense.
- Common mistake: using warm as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.

- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Deniy: boyfriend.

prank-war ensemble: peer in her own right.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Vesta, keep the central pressure tied to wanting to be recognized as a full strategist rather than an accessory to Deniy while actually needing to state her own limits before becoming the room's quiet manager.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Vesta, keep the central pressure tied to wanting to be recognized as a full strategist rather than an accessory to Deniy while actually needing to state her own limits before becoming the room's quiet manager.
Compensating behavior	Let them initially solve the problem the way they always do. It should work partially, which is why the habit survives. For Vesta, keep the central pressure tied to wanting to be recognized as a full strategist rather than an accessory to Deniy while actually needing to state her own limits before becoming the room's quiet manager.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Vesta, keep the central pressure tied to wanting to be recognized as a full strategist rather than an accessory to Deniy while actually needing to state her own limits before becoming the room's quiet manager.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Vesta, keep the central pressure tied to wanting to be recognized as a full strategist rather than an accessory to Deniy while actually needing to state her own limits before becoming the room's quiet manager.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Vesta, keep the central pressure tied to wanting to be recognized as a full strategist rather than an accessory to Deniy while actually needing to state her own limits before becoming the room's quiet manager.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Vesta, keep the central pressure tied to wanting to be recognized as a full strategist rather than an accessory to Deniy while actually needing to state her own limits before becoming the room's quiet manager.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from poised: a pause, look, posture shift, or too-precise question. The second beat comes from composed, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let composed color the interpretation and considerate color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is warm. The scene becomes interesting when the elegant part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their considerate trait governs the recalculation; their patient trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from strategic: a pause, look, posture shift, or too-precise question. The second beat comes from independent, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let elegant color the interpretation and composed color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the considerate part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their elegant trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from dangerous-when-needed: a pause, look, posture shift, or too-precise question. The second beat comes from patient, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let independent color the interpretation and independent color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is poised. The scene becomes interesting when the composed part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their composed trait governs the recalculation; their considerate trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from warm: a pause, look, posture shift, or too-precise question. The second beat comes from elegant, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let considerate color the interpretation and patient color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is strategic. The scene becomes interesting when the independent part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their elegant trait governs the recalculation; their composed trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from observant: a pause, look, posture shift, or too-precise question. The second beat comes from considerate, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let patient color the interpretation and elegant color the response.
- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is dangerous-when-needed. The scene becomes interesting when the patient part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their independent trait governs the recalculation; their independent trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from poised: a pause, look, posture shift, or too-precise question. The second beat comes from composed, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let composed color the interpretation and considerate color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is warm. The scene becomes interesting when the elegant part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their considerate trait governs the recalculation; their patient trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from strategic: a pause, look, posture shift, or too-precise question. The second beat comes from independent, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let elegant color the interpretation and composed color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is observant. The scene becomes interesting when the considerate part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their patient trait governs the recalculation; their elegant trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from dangerous-when-needed: a pause, look, posture shift, or too-precise question. The second beat comes from patient, which determines whether they approach, deflect, challenge, or wait.

30. When they are offered an easy way to avoid consequences: They do not instantly announce the emotion. Give them one concrete observation about the situation, then let independent color the interpretation and independent color the response.

M. Scene Seed Bank

- Give Vesta a scene where being poised solves the practical problem but damages a relationship.
- Put Vesta with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Vesta did not know they had.
- Write a low-stakes competition where Vesta's composed side becomes unexpectedly intense.
- Give Vesta information that would help them win an argument but hurt someone if revealed.
- Force Vesta to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Vesta does in the three seconds after realizing it failed.
- Have another character misunderstand Vesta's warm behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Vesta without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Vesta asks why or pretends not to care.
- Write a scene where Vesta has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Vesta to the single adjective 'poised'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.
- Do not make her exist only to soften, explain, or control Deniy. She needs independent choices, competence, and relationships.

O. 50-Point Quick Reference

01. Primary trait: poised
02. Secondary trait: composed
03. Contradictory trait: warm
04. Social pressure trait: considerate
05. Hidden-useful trait: strategic
06. Wants to be recognized as a full strategist rather than an accessory to Deniy
07. Needs to state her own limits before becoming the room's quiet manager
08. Core fear cluster: being underestimated because she is calm or relationally introduced
09. Pressure point: Deniy's chaos can make people overlook her choices
10. Role: Deniy's girlfriend; poised counterweight with independent agency
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: clever solutions

22. Likely comfort: repair after conflict
23. Likely comfort: objects with personal history
24. Likely comfort: competence without showboating
25. Likely comfort: quiet food/drink routines
26. Likely friction: carelessness with private information
27. Likely friction: being spoken for
28. Likely friction: consequences being treated as temporary
29. Likely friction: needless ambiguity
30. Likely friction: unearned authority
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

25 Emily Nanacea

COURT / OPPOSITION

PRONOUNS	she/her
SPECIES / TYPE	open
AGE	open
STORY ROLE	Ivan's lawyer; competent legal antagonist

Writing thesis: Emily Nanacea should remain recognizable even when stripped of costume, species spectacle, and plot function. Their scenes are driven by the friction between being controlled and articulate, wanting to build the strongest defensible narrative for Ivan, and needing to recognize the moral cost of procedural victory, whether or not she chooses differently.

A. Canon Ledger

LOCKED CANON - use these as hard constraints unless future canon deliberately changes them.

- Emily Nanacea is one character, not two separate characters.
- She is female.
- She is Ivan's lawyer and is not on the group's side during the court/trial arc.
- She should function as a competent legal antagonist/opposing presence rather than a cartoon villain.

OPEN FIELD - leave these unspecified until current canon establishes them.

- Exact species/type remains open.
- Exact numerical age remains open unless a relative-age fact is already established.
- Exact birthday, height, clothing rotation, favorite media, and private history should not be treated as locked unless established in-story.
- Expansion material below can be promoted to canon later, but it is deliberately labeled so future revisions stay easy.

B. Visual Design & Physical Performance

BIBLE EXPANSION - visual language designed to preserve readability and personality.

Build the design around the tension between controlled and articulate. The silhouette should communicate how Emily Nanacea occupies space before the face has to do all the acting. Avoid adding visual gimmicks that imply powers or biology not present in Locked Canon.

- Primary silhouette rule: body language should make the 'controlled' trait readable at rest and the 'articulate' trait readable once the character starts interacting.
- Secondary detail rule: accessories should reveal routine, history, taste, or relationships; avoid decoration that exists only because the design needs to look busier.
- Face rule: reserve the largest expressions for moments that earn them. Small eye, mouth, ear, head-angle, or posture shifts make later extremes more powerful.
- Hands / gesture rule: decide whether the character talks with hands, hides hands, occupies objects, points, fidgets, folds arms, or keeps motion economical; repeat this grammar consistently.
- Distance rule: how close they stand to friends, family, strangers, authority figures, and partners is a recurring relationship meter.
- Damage / exhaustion rule: change posture, balance, grooming, and reaction time before resorting to generic visual 'injured' symbols.
- Species rule: nonhuman anatomy should affect locomotion, clothing fit, personal space, and mundane behavior without turning every scene into an anatomy lecture.
- Continuity rule: a model sheet should track front/side/back silhouette, eye details, hands/feet, tail/wings/fins where applicable, normal posture, stress posture, and two relationship-specific expressions.

C. Personality Architecture

BIBLE EXPANSION

Core trait stack: controlled • articulate • strategic • professional • unsympathetic • observant • disciplined • adversarial • patient • precise

WANTS	build the strongest defensible narrative for Ivan
NEEDS	recognize the moral cost of procedural victory, whether or not she chooses differently
FEARS	losing control of framing or being outprepared
PRESSURE POINT	evidence that resists her preferred narrative

Internal tension	How to write it
Controlled vs. Unsympathetic	Both are true. Do not pick one permanently. Under low pressure, controlled can dominate; under relational or public pressure, unsympathetic may interrupt it, creating behavior that feels inconsistent only from the outside.
Articulate vs. Observant	Both are true. Do not pick one permanently. Under low pressure, articulate can dominate; under relational or public pressure, observant may interrupt it, creating behavior that feels inconsistent only from the

	outside.
Strategic vs. Disciplined	Both are true. Do not pick one permanently. Under low pressure, strategic can dominate; under relational or public pressure, disciplined may interrupt it, creating behavior that feels inconsistent only from the outside.
Professional vs. Adversarial	Both are true. Do not pick one permanently. Under low pressure, professional can dominate; under relational or public pressure, adversarial may interrupt it, creating behavior that feels inconsistent only from the outside.
Unsympathetic vs. Patient	Both are true. Do not pick one permanently. Under low pressure, unsympathetic can dominate; under relational or public pressure, patient may interrupt it, creating behavior that feels inconsistent only from the outside.

D. Emotional State Atlas

State	Likely outward pattern
At ease	Their controlled side becomes less guarded; they spend less effort managing how they are read and allow professional behavior to show in small, ordinary ways.
Amused	Humor arrives through the character's own rhythm rather than generic laughing. The articulate trait shapes what they notice; unsympathetic shapes whether they share the joke or keep it private.
Embarrassed	They try to restore control before explaining the feeling. Look for shortened answers, displaced attention, or a practical task used as cover rather than an exaggerated blush-and-stammer default.
Irritated	Their attention narrows. The professional side becomes more exacting, while disciplined determines whether the irritation becomes a joke, a boundary, or a quiet withdrawal.
Angry	Anger should sharpen priorities rather than erase personality. They become more decisive about what is unacceptable, and their existing unsympathetic / adversarial contradiction gets louder.
Afraid	Fear compresses their world into immediate decisions: who is safe, what changed, what information is missing, and what action buys time. Avoid turning fear into a totally different character voice.
Hurt	They are more likely to reveal pain through changed behavior than through a perfectly articulated confession. What they stop doing can matter more than what they say.
Protective	Protection should express their values, not automatic control. Their first move is filtered through adversarial; their mistake risk is letting controlled justify acting without asking.
Jealous / displaced	Do not reduce this to possessiveness. The useful question is what need feels threatened - attention, certainty, status, intimacy, or belonging - and how their patient trait disguises that need.
Exhausted	Performance drops. They use fewer social filters, simpler language, and more honest body positioning. Small preferences they normally compromise on become visible.
Under scrutiny	They become conscious of narrative: what can be proven, what can be misunderstood, and what they are willing to say aloud. Their controlled trait may look stronger because they are self-monitoring.
After making a mistake	Repair is most in-character when it costs them something: pride, time, certainty, status, or the comfort of pretending nothing happened. A real apology changes later behavior.

Writer note: the atlas is a behavior palette, not a deterministic rule. Use it to stop every character from sharing the same anger, fear, embarrassment, or affection animation.

E. Thought Process & Decision Engine

145. 1. NOTICE - Emily Nanacea first filters a situation through controlled: what detail feels immediately important?
146. 2. CLASSIFY - the articulate side decides whether the situation is safe, funny, insulting, urgent, intimate, or strategically useful.
147. 3. PROTECT - before choosing an action, they protect a self-image connected to being strategic. This is where a flaw can hide inside a virtue.
148. 4. CHOOSE - they select the move most likely to help them build the strongest defensible narrative for Ivan. Under pressure, this short-term goal can conflict with what they actually need: recognize the moral cost of procedural victory, whether or not she chooses differently.
149. 5. REVISE - if another person reacts unexpectedly, the professional trait determines whether they double down, ask a question, joke, retreat, repair, or change strategy.
150. 6. MEMORY - meaningful consequences should alter later choices. A relationship bible is useful only if the character remembers what earlier scenes taught them.

F. Voice, Dialogue & Silence

BIBLE EXPANSION

Opening a conversation: Start from what they actually want rather than filler. Their first line usually establishes purpose, mood, or a small observation.

Dodging a question: Change level instead of topic: answer the literal part while leaving the emotional part untouched, or redirect into logistics.

Teasing: Target familiarity, not humiliation. The best tease proves they know the other person well.

Apologizing: Name the action, name the effect, avoid 'if you felt', and show the changed behavior after the apology.

Being affectionate: Use character-specific attention: remembered preferences, proximity, a shared routine, or an exact observation rather than generic declarations every time.

Setting a boundary: Make the sentence shorter and less ornamental than normal. Important boundaries should be legible even if the character is uncomfortable.

Lying: The lie should exploit their normal truth-telling habits. A usually detailed speaker may become too clean; a usually concise speaker may over-explain.

Panicking: Vocabulary may simplify, but core priorities stay recognizable. Do not make panic an excuse for random behavior.

Arguing: Let them pursue a specific win condition: being understood, establishing facts, protecting someone, ending the exchange, or forcing acknowledgment.

Flirting: Keep the character's normal intelligence and humor intact. Flirting should sound like this person with more relational attention, not a stock romance voice.

Court / formal pressure: Separate what they know, what they infer, and what they feel. Precision creates tension because emotional reality does not always fit procedural language.

After silence: The line that breaks silence should reveal what they chose to prioritize during the pause.

- Can a reader identify Emily Nanacea from a line with the name tag removed?
- Does the line reflect at least one of: controlled, articulate, strategic - rather than generic cleverness?
- Does the character say more, less, or different information around a partner/family member than around a stranger?
- If the character is silent, is the silence doing something specific - refusal, processing, observation, fear, restraint, affection, or exhaustion?
- Avoid catchphrases so frequent that the character turns into an imitation of themselves.
- Let vocabulary change with context, but preserve the underlying decision-making rhythm.

G. Additional Character Notes

BIBLE EXPANSION - additional compatible characterization and scene guidance. Locked Canon above remains authoritative.

CORE CAST / COURT ARC OPPOSITION

Emily is strongest when she is not a cackling villain but an intelligent, unsympathetic opponent who can make a room furious by asking a technically legitimate question at exactly the worst emotional moment.

- Emily Nanacea remains in the continuing cast.
- Emily is Ivan's lawyer during the court/trial arc.
- She is not on the group's side and is meant to function as an opposing or unsympathetic presence.

Visual & Physical Direction

- Professional, controlled presentation suits the legal role without requiring a generic suit in every scene.
- Design should communicate intentionality: tidy lines, deliberate accessories, nothing accidental.
- Expressions can stay measured even when the room around her becomes emotional.
- Avoid demonic or overtly villain-coded design cues; the conflict should come from behavior and position.

Personality Architecture

precise, adversarial, disciplined, strategic, emotionally contained, sharp, patient, comfortable being disliked, unlikely to volunteer sympathy she cannot use.

WANTS To control the legal framing of Ivan's case and expose weaknesses in the group's version of events.

NEEDS If she receives an arc, to confront the difference between winning an argument and accurately representing harm.

FEARS Losing control of the record through imprecision or emotional chaos.

PRESSURE POINT Witnesses who remain calm and exact when she expects them to become reactive.

Voice & Dialogue Guide

- Formal without being archaic.
- Uses narrow questions.
- Rarely raises her voice.
- May repeat a witness's own words back with changed emphasis.
- Avoid needless cruelty; her sharpness works best when it is purposeful.
- Silence after a question is one of her strongest tools.

Competencies

Legal strategy • Cross-examination style questioning • Memory for wording • Emotional composure • Framing • Spotting inconsistencies

Weaknesses, Friction & Failure Modes

- Can become overconfident in technical framing
- May underestimate relational truth because it is messy
- Can appear cold even when she is simply staying professional
- Tendency to treat every ambiguity as leverage
- May push too hard and reveal bias
- Comfort with being disliked can make self-correction rare

Relationship Dynamics

- Ivan: Client. Her duty and strategy center his defense, creating direct conflict with the group.
- Lime: Opposing legal mind; contrast Emily's sharp compression with Lime's kindness and visual flamboyance.
- Aztec: Another opposing lawyer/friend of the group; good for strategic back-and-forth.
- Diamond: Diamond's organized legal support and voice device can create a memorable contrast with Emily's verbal control.
- Naki: A witness/participant who may frustrate her if he remains precise instead of emotionally baited.
- Mako: A controlled opponent who can match her restraint, making their scenes about logic and limits rather than volume.

Arc Trajectory

- 1. Introduce her competence before asking the audience to dislike her tactics.
- 2. Let her win some points; an antagonist who never succeeds creates no pressure.
- 3. Show the group learning not to answer the emotional version of her questions.
- 4. Allow moments where her professional role and personal judgment are not perfectly identical.
- 5. Long-term: she can remain adversarial without becoming omnipotent or one-note.

Scene-Writing Guide

- Her entrance should change how people choose words.
- Use exact phrasing and pauses as action beats.
- Let another character call out a misleading implication rather than merely calling her evil.
- Court prep scenes can foreshadow the questions she will ask.
- Keep law grounded; avoid miracle evidence or surprise theatrics unless seeded.
- She should have private moments where she is still a person, even if they do not redeem her.

Continuity Redlines

- She is not on the group's side.
- Do not soften her into a secret ally without a deliberate later canon change.
- Do not make her incompetent simply so the group can win.
- No magical truth detection or sci-fi legal tech.

Story Hooks & Chapter Seeds

- Emily isolates a tiny inconsistency that forces the group to reconstruct the timeline more carefully.
- She and Lime agree on a procedural point, briefly confusing everyone who expects pure hostility.
- Diamond catches a wording pattern in Emily's questions.
- Emily is forced to choose between an aggressive tactic and preserving credibility.
- A post-hearing hallway scene shows how differently she speaks when no witness is on the stand.

H. Likes, Dislikes & Mundane Texture

BIBLE EXPANSION - optional texture, not immutable canon.

Likely likes / comfort	Likely dislikes / friction
competence without showboating	having motives assigned to them
inside jokes that survive context changes	people treating boundaries as challenges
being remembered accurately	being cornered into instant disclosure

people who say what they mean	being spoken for
clever solutions	fake apologies
winning fairly	performative concern
private creative time	jokes that require a real victim
objects with personal history	being reduced to one trait

- What object do they always know the location of?
- What tiny inconvenience reliably annoys them?
- What does their room/desk/phone/home screen reveal without dialogue?
- How do they eat when alone versus with friends?
- What do they do while waiting?
- How quickly do they answer messages from different people?
- Which kind of compliment do they believe, and which do they distrust?
- What ordinary task are they unexpectedly good or bad at?
- What does exhaustion make them stop pretending to enjoy?
- What routine changes first when their life becomes unstable?

I. Conflict, Boundaries & Repair

- Conflict trigger: anything that activates the fear of losing control of framing or being outprepared can make normal controlled behavior harden into a defense.
- Common mistake: using strategic as proof that their interpretation must be correct.
- Escalation test: before making the character crueler, ask what they are trying to protect and why a less destructive option feels unavailable in that exact moment.
- Boundary language: a real boundary must be understandable to the other person; ambiguity may be emotionally realistic, but the story should know when a boundary was actually communicated.
- Repair language: apologies name behavior and effect. The next scene should contain evidence that the lesson survived the apology.
- Trust is not binary. Track separate trust categories: physical safety, emotional confidentiality, reliability, judgment, honesty, competence, and romantic exclusivity where relevant.
- After major harm, do not jump straight to normal banter because the plot needs the group together. Shared space can continue while trust remains damaged.
- Prank-war rule: stop immediately for real injury, genuine distress, or a clear no. Cleverness never outranks safety.

J. Relationship Web

MIXED: named links may be Locked Canon; interpretive dynamics are Bible Expansion.

Ivan: client.

Lime/Aztec/Diamond: opposing legal team.

group: adversarial relationship.

- Who gets the fastest honest answer from this character?
- Who gets the most polished answer?
- Who can annoy them without threatening the relationship?
- Whose disappointment matters more than their anger?
- Who do they instinctively look for after something goes wrong?
- Who knows a habit the character does not realize is visible?
- Who is allowed closer physical proximity than everyone else?
- Who receives practical care instead of verbal reassurance?
- Which relationship contains the most unresolved asymmetry?
- Which bond would change the most if the characters had to spend a week together with no larger group?
- What does this character wrongly assume another person already knows?
- What small repeated behavior proves the relationship has changed over time?

K. Arc Blueprint

Phase	Story function
Baseline	Show the character doing ordinary life well enough that later disruption has something real to damage. For Emily Nanacea, keep the central pressure tied to wanting to build the strongest defensible narrative for Ivan while actually needing to recognize the moral cost of procedural victory, whether or not she chooses differently.
Pressure enters	Introduce a problem that attacks their specific coping strategy rather than only increasing generic danger. For Emily Nanacea, keep the central pressure tied to wanting to build the strongest defensible narrative for Ivan while actually needing to recognize the moral cost of procedural victory, whether or not she chooses differently.
Compensating behavior	Let them initially solve the problem the way they always do. It should

	work partially, which is why the habit survives. For Emily Nanacea, keep the central pressure tied to wanting to build the strongest defensible narrative for Ivan while actually needing to recognize the moral cost of procedural victory, whether or not she chooses differently.
Cost becomes visible	Someone else pays for, resists, or names the flaw in that coping strategy. For Emily Nanacea, keep the central pressure tied to wanting to build the strongest defensible narrative for Ivan while actually needing to recognize the moral cost of procedural victory, whether or not she chooses differently.
Choice point	Force a decision where protecting the old self-image conflicts with protecting the relationship or value they actually care about. For Emily Nanacea, keep the central pressure tied to wanting to build the strongest defensible narrative for Ivan while actually needing to recognize the moral cost of procedural victory, whether or not she chooses differently.
Behavioral proof	Growth is shown through a new action under pressure, not a speech claiming they changed. For Emily Nanacea, keep the central pressure tied to wanting to build the strongest defensible narrative for Ivan while actually needing to recognize the moral cost of procedural victory, whether or not she chooses differently.
Residual scar	Do not erase the old habit. The character now catches it sooner, repairs it faster, or chooses it more deliberately. For Emily Nanacea, keep the central pressure tied to wanting to build the strongest defensible narrative for Ivan while actually needing to recognize the moral cost of procedural victory, whether or not she chooses differently.

L. 30-Scenario Micro-Reaction Bank

BIBLE EXPANSION - scene-behavior prompts, not mandatory beats.

- 01. When someone enters the room unexpectedly:** The first visible tell should come from controlled: a pause, look, posture shift, or too-precise question. The second beat comes from articulate, which determines whether they approach, deflect, challenge, or wait.
- 02. When a joke lands much harder than intended:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let articulate color the interpretation and professional color the response.
- 03. When a friend stops replying:** Their instinct is to protect their self-image as someone who is strategic. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 04. When they are accused of something unfairly:** Use a two-step reaction: internal recalculation, then social choice. Their professional trait governs the recalculation; their adversarial trait governs what other people actually get to see.
- 05. When someone gives them sincere praise:** The first visible tell should come from unsympathetic: a pause, look, posture shift, or too-precise question. The second beat comes from precise, which determines whether they approach, deflect, challenge, or wait.
- 06. When the group starts arguing over a trivial detail:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and articulate color the response.
- 07. When a plan fails in public:** Their instinct is to protect their self-image as someone who is disciplined. The scene becomes interesting when the professional part of them pushes in the opposite direction.
- 08. When they see someone they care about injured:** Use a two-step reaction: internal recalculation, then social choice. Their adversarial trait governs the recalculation; their observant trait governs what other people actually get to see.
- 09. When a private detail becomes public:** The first visible tell should come from patient: a pause, look, posture shift, or too-precise question. The second beat comes from adversarial, which determines whether they approach, deflect, challenge, or wait.
- 10. When they realize they misunderstood the situation:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let precise color the interpretation and precise color the response.
- 11. When they are asked to lead:** Their instinct is to protect their self-image as someone who is controlled. The scene becomes interesting when the articulate part of them pushes in the opposite direction.
- 12. When they are told to stay out of it:** Use a two-step reaction: internal recalculation, then social choice. Their articulate trait governs the recalculation; their professional trait governs what other people actually get to see.
- 13. When someone breaks a promise:** The first visible tell should come from strategic: a pause, look, posture shift, or too-precise question. The second beat comes from observant, which determines whether they approach, deflect, challenge, or wait.
- 14. When they receive a gift that shows unusual attention:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let professional color the interpretation and adversarial color the response.
- 15. When they are exhausted but everyone else wants to keep going:** Their instinct is to protect their self-image as someone who is unsympathetic. The scene becomes interesting when the precise part of them pushes in the opposite direction.
- 16. When a prank crosses a boundary:** Use a two-step reaction: internal recalculation, then social choice. Their observant trait governs the recalculation; their articulate trait governs what other people actually get to see.
- 17. When they discover evidence that changes the story:** The first visible tell should come from disciplined: a pause, look, posture shift, or too-precise question. The second beat comes from professional, which determines whether they approach, deflect, challenge, or wait.
- 18. When they have five quiet minutes with the person they trust most:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let adversarial color the interpretation and observant color the response.

- 19. When they have to ask for help:** Their instinct is to protect their self-image as someone who is patient. The scene becomes interesting when the adversarial part of them pushes in the opposite direction.
- 20. When they know a secret they are not entitled to share:** Use a two-step reaction: internal recalculation, then social choice. Their precise trait governs the recalculation; their precise trait governs what other people actually get to see.
- 21. When someone apologizes badly:** The first visible tell should come from controlled: a pause, look, posture shift, or too-precise question. The second beat comes from articulate, which determines whether they approach, deflect, challenge, or wait.
- 22. When someone apologizes well:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let articulate color the interpretation and professional color the response.
- 23. When they are bored:** Their instinct is to protect their self-image as someone who is strategic. The scene becomes interesting when the observant part of them pushes in the opposite direction.
- 24. When they are overstimulated by a loud social scene:** Use a two-step reaction: internal recalculation, then social choice. Their professional trait governs the recalculation; their adversarial trait governs what other people actually get to see.
- 25. When they lose a competition by a tiny margin:** The first visible tell should come from unsympathetic: a pause, look, posture shift, or too-precise question. The second beat comes from precise, which determines whether they approach, deflect, challenge, or wait.
- 26. When they win but the other person is genuinely upset:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let observant color the interpretation and articulate color the response.
- 27. When a family member makes a decision they hate:** Their instinct is to protect their self-image as someone who is disciplined. The scene becomes interesting when the professional part of them pushes in the opposite direction.
- 28. When they are forced to wait for information:** Use a two-step reaction: internal recalculation, then social choice. Their adversarial trait governs the recalculation; their observant trait governs what other people actually get to see.
- 29. When they have to tell a painful truth:** The first visible tell should come from patient: a pause, look, posture shift, or too-precise question. The second beat comes from adversarial, which determines whether they approach, deflect, challenge, or wait.
- 30. When they are offered an easy way to avoid consequences:** They do not instantly announce the emotion. Give them one concrete observation about the situation, then let precise color the interpretation and precise color the response.

M. Scene Seed Bank

- Give Emily Nanacea a scene where being controlled solves the practical problem but damages a relationship.
- Put Emily Nanacea with the person they know best and remove the usual subject they talk about; force a new kind of intimacy.
- Let someone correctly notice a tell Emily Nanacea did not know they had.
- Write a low-stakes competition where Emily Nanacea's articulate side becomes unexpectedly intense.
- Give Emily Nanacea information that would help them win an argument but hurt someone if revealed.
- Force Emily Nanacea to ask for help from a person they would rather impress.
- Put them in a quiet domestic task immediately after a high-stakes event; let the mundane action carry the emotional aftermath.
- Let a joke fail. The important part is what Emily Nanacea does in the three seconds after realizing it failed.
- Have another character misunderstand Emily Nanacea's strategic behavior as indifference, arrogance, flirtation, fear, or hostility.
- Give them a choice between being technically correct and being relationally useful.
- Let them receive an apology they desperately wanted, but at the wrong time or in the wrong form.
- Show what 'safe' looks like for Emily Nanacea without using dialogue about safety.
- Make them defend a person they are currently angry with.
- Give them a small private victory nobody else notices.
- Make the scene end before the emotional issue is resolved, then show the changed behavior in a later chapter.
- Let a family/friend routine break and see whether Emily Nanacea asks why or pretends not to care.
- Write a scene where Emily Nanacea has to distinguish secrecy from privacy.
- Let them be the least informed person in the room for once.
- Give them authority and make the ethical choice less convenient than the efficient one.
- Let them encounter someone whose coping strategy resembles their own enough to be irritating.

N. Continuity Redlines & Writer QA

- Do not add powers, species abilities, family ties, diagnoses, ages, or pronouns that conflict with Locked Canon or fill Open Fields without an explicit canon decision.
- Do not reduce Emily Nanacea to the single adjective 'controlled'. The contradiction stack is part of the design.
- Do not use trauma or conflict as permission to erase all humor, routine, appetite, boredom, irritation, and ordinary life.
- Do not make every relationship equally intimate. Different people should have different access to information, touch, humor, and vulnerability.
- Do not confuse explanation with absolution. A character can have understandable motives and still owe repair or consequences.
- Do not make a partner, sibling, or diagnosis substitute for an individual goal.
- Do not reset a boundary merely because the next chapter wants the cast in the same room.
- Do not import unrelated project lore just because a name/species appeared elsewhere.
- When uncertain, mark the detail Open Field in planning notes rather than silently hardening it into canon.
- Do not split 'Emily Nanacea' into two people.
- Do not make competence disappear just to let the protagonists win a legal beat.

O. 50-Point Quick Reference

01. Primary trait: controlled
02. Secondary trait: articulate
03. Contradictory trait: strategic
04. Social pressure trait: professional
05. Hidden-useful trait: unsympathetic
06. Wants to build the strongest defensible narrative for Ivan
07. Needs to recognize the moral cost of procedural victory, whether or not she chooses differently
08. Core fear cluster: losing control of framing or being outprepared
09. Pressure point: evidence that resists her preferred narrative
10. Role: Ivan's lawyer; competent legal antagonist
11. Affection should be specific rather than generic.
12. Anger sharpens existing priorities.
13. Fear narrows attention; it does not replace personality.
14. Embarrassment often produces control behavior before confession.
15. Exhaustion lowers social filtering.
16. A real apology changes behavior.
17. Trust has multiple categories.
18. Silence must have a reason.
19. Jokes should reveal relationship knowledge.
20. Boundaries must be legible.
21. Likely comfort: competence without showboating
22. Likely comfort: inside jokes that survive context changes
23. Likely comfort: being remembered accurately
24. Likely comfort: people who say what they mean
25. Likely comfort: clever solutions
26. Likely friction: having motives assigned to them
27. Likely friction: people treating boundaries as challenges
28. Likely friction: being cornered into instant disclosure
29. Likely friction: being spoken for
30. Likely friction: fake apologies
31. Track who they look at first in a group scene.
32. Track who they answer fastest.
33. Track who can interrupt them without offense.
34. Track what they do with hands when stressed.
35. Track how close they stand to different people.
36. Track whether they seek facts or reassurance first.
37. Track what kind of praise they believe.
38. Track what they hide when tired.
39. Track what they remember from earlier conflicts.
40. Track whether growth appears in action before language.
41. Keep mundane routines alive between plot beats.
42. Let competence have limits.
43. Let flaws sometimes be useful.
44. Let virtues sometimes cause damage when overused.
45. Do not over-explain species traits in ordinary scenes.
46. Do not flatten relationship chemistry into constant flirting.
47. Do not make every emotional scene a confession.
48. Do not make every conflict a screaming match.
49. Do not make every repair immediate.
50. Open Fields remain open until canon changes.

Appendix A - Relationship Continuity Matrix

Person A	Person B	Relationship	Status	Writing note
Naki	Blade	friends -> casual nonsexual intimacy/FWB-style -> boyfriends	Locked chronology	Use accumulation, mutual recognition, shared routines, and boundary clarity.
Mako	Markov	adoptive brothers	Locked	Adoption does not make Markov less family.
Mako	Amy	biological siblings	Locked	Do not turn biological status into a ranking over Markov.
Mako	Blurb	cousins	Locked	Family shorthand can create both comfort and entitlement risk.
Mako	Joel	oldest/OG close friends	Locked	History should create specific rituals and shorthand.
Mako	James	close friends	Locked	Reliable familiarity.
Mako	Fear	close friends	Locked	Autism does not change friendship status or justify patronizing behavior.
Mako	Zucchi	close friends	Locked	Art gives scenes another language for attention.
Mako	Isaac	close friends	Locked	Grounded reliability.
Deniy	Vesta	romantic partners	Locked	Vesta is independent, not a chaos-management accessory.
Ivan	Emily Nanacea	client / lawyer	Locked	Legal alliance is not the same thing as moral endorsement.
Group	Ivan	trust rupture after gun incident	Locked	Consequences persist.
Lime/Aztec/Diamond	Emily Nanacea	opposing legal sides	Locked framework	Competence on both sides creates pressure.

Appendix B - Prank-War Ethics & Escalation System

- **GOOD PRANK:** target can laugh once the reveal lands; cleanup and consequences are proportionate; no real injury; no weaponizing private trauma; no deliberate humiliation as the sole joke.
- **YELLOW LIGHT:** prank touches a sensitive relationship, private information, property, sleep, food, money, or public reputation. Get explicit or well-established consent before escalation.
- **RED LIGHT:** genuine distress, injury, a clear no, active crisis, self-destructive thoughts, legal jeopardy, or a target who cannot safely opt out. Stop the bit.
- **REPAIR:** cleanup, apology, replacement/repair of property, checking the target privately, and changing the next prank. Repair is part of the arc, not an interruption to comedy.
- **CHARACTER DIFFERENTIATION:** Sododa brings enthusiasm; Polar formal precision; Redsky classy silliness; Raine improvisational goofiness; Deniy psychological chaos; Grotti contradictory misdirection; Vesta composed strategy; Blade intimate familiarity; Naki observational counterplay.

Level	Definition
1 - Tease	verbal bait, harmless fake-out, obvious setup
2 - Minor inconvenience	reversible, quick cleanup, zero risk
3 - Personalization	uses known habits/preferences without exposing private material
4 - Social puzzle	misdirection, clues, decoys, layered reveal
5 - Environmental setup	larger staged event with opt-out and safety check
6 - Rivalry peak	complex multi-person play where consent and repair are explicit
STOP	real distress, injury, coercion, humiliation, or crisis

Appendix C - Court / Trial Scene Engine

Evidence: Separate what happened, what can be demonstrated, what each witness remembers, and what can be challenged.

Framing: Emily is dangerous when she can choose the question everyone argues about. Lime/Aztec/Diamond gain ground by challenging the frame, not just the answer.

Witness texture: Trauma does not create perfect testimony. Memory can be emotionally accurate while details are fragmented; avoid using this as automatic proof of dishonesty.

Competence: All legal participants should be capable enough that wins require preparation, evidence, and strategic choices.

Aftermath: Court victories do not instantly restore physical safety, trust, sleep, routines, or friendships.

- What fact is undisputed?
- What fact is disputed?
- Who has firsthand knowledge?
- What is hearsay or inference?
- What physical/digital evidence exists?
- What does Emily want the fact-finder to believe the case is about?
- What does the group's legal team want it to be about?
- Which witness is emotionally credible but procedurally vulnerable?
- Which piece of evidence changes leverage rather than proving everything?
- What consequence remains even if a legal outcome is favorable?

Appendix D - Household & Friendship Scene Generator

- Domestic scenes should not exist only as recovery rooms. Give the household chores, food disputes, noise, privacy, decorations, transport, forgotten objects, schedules, and conflicting plans.
- Mako's protectiveness should sometimes help and sometimes become too controlling. Markov and Amy need independent competence and mistakes.
- The close circle stays distinct by giving each friend a different relationship to silence, jokes, planning, art, risk, and Mako's authority.
- Family biology is descriptive, not a ranking system. Markov's adoption is never a lesser category of belonging.

Location	Pressure	Rule
kitchen after midnight	someone is avoiding a conversation	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.
living room during cleanup	one person is obviously exhausted	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.
car ride after an argument	the group has to leave in ten minutes	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.
store run	a household item is broken	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.
quiet hallway	a friend arrives unannounced	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.
shared outdoor space	someone cooked something questionable	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.
waiting room	nobody agrees whose job something is	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.
worktable covered in unfinished projects	a private message changes the mood	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.
kitchen after midnight	someone is avoiding a conversation	Choose two characters who do not normally get a private scene and make the mundane task continue while the emotional issue emerges.

Appendix E - Global Voice Cheat Sheet

Character	Baseline rhythm	Secondary color	Pressure cue
Naki / N4-K2	observant / dryly funny	loyal	Under pressure: protect against being misread; losing a relationship through silence
Mako	observant / restrained	analytical	Under pressure: protect against failing people who rely on him; losing control of a crisis
James	reliable / familiar	witty	Under pressure: protect against quiet drift between people who assume they are fine
Doc / S-769769	methodical / calm	precise	Under pressure: protect against preventable harm; being forced to act without enough infor
Scarf	social / adaptive	warm	Under pressure: protect against a room becoming emotionally unreachable
Ivan	volatile / defensive	reckless	Under pressure: protect against loss of power and social standing
Markov	self-possessed / alert	loyal	Under pressure: protect against being treated as less-family or overprotected
Amy	bright / observant	independent	Under pressure: protect against being left outside serious family conversations
Isaac	steady / practical	loyal	Under pressure: protect against failing when someone counted on him
Fear	direct / loyal	perceptive	Under pressure: protect against being patronized or spoken around
Zucchi	creative / attentive	playful	Under pressure: protect against creative dismissal or being treated as decorative
Blurb	familiar / teasing	loyal	Under pressure: protect against family distance that nobody names
Joel	goofy / fast	loyal	Under pressure: protect against growing apart or becoming the friend everyone outgrows
Blade	confident / teasing	attentive	Under pressure: protect against a relationship becoming important without clear mutual lan
Lime	competent / quick	strategic	Under pressure: protect against failing a friend through avoidable legal error
Aztec	measured / strategic	patient	Under pressure: protect against being technically right but strategically ineffective
Diamond	precise / patient	technical	Under pressure: protect against others confusing communication method with competence
Sododa	optimistic / excited	energetic	Under pressure: protect against being the only person still excited after a line was cross
Polar	formal / kind	precise	Under pressure: protect against causing harm through misunderstanding
Redsky	classy / kind	silly	Under pressure: protect against public humiliation or cruelty being mislabeled as humor
Raine	goofy / silly	improvisational	Under pressure: protect against hurting someone while trying to be funny
Deniy	chaotic / merciless	clever	Under pressure: protect against losing control of how others read him; real private despai
Grotti	silly / serious	dumb	Under pressure: protect against being treated as either idiot or mastermind exclusively

Vesta	poised / composed	warm	Under pressure: protect against being underestimated because she is calm or relationally i
Emily Nanacea	controlled / articulate	strategic	Under pressure: protect against losing control of framing or being outprepared

Appendix F - Open Canon Fields Register

Character	Open fields	Rule
Naki / N4-K2	exact age	Leave unspecified unless current canon explicitly establishes it.
Mako	species/type, exact age	Leave unspecified unless current canon explicitly establishes it.
James	species/type	Leave unspecified unless current canon explicitly establishes it.
Doc / S-769769	pronouns, species/type, exact age	Leave unspecified unless current canon explicitly establishes it.
Scarf	pronouns, species/type, exact age	Leave unspecified unless current canon explicitly establishes it.
Ivan	species/type, exact age	Leave unspecified unless current canon explicitly establishes it.
Amy	species/type	Leave unspecified unless current canon explicitly establishes it.
Isaac	species/type, exact age	Leave unspecified unless current canon explicitly establishes it.
Fear	species/type	Leave unspecified unless current canon explicitly establishes it.
Zucchi	species/type	Leave unspecified unless current canon explicitly establishes it.
Blurb	species/type	Leave unspecified unless current canon explicitly establishes it.
Joel	species/type	Leave unspecified unless current canon explicitly establishes it.
Aztec	species/type	Leave unspecified unless current canon explicitly establishes it.

Deniy	exact age	Leave unspecified unless current canon explicitly establishes it.
Grotti	exact age	Leave unspecified unless current canon explicitly establishes it.
Vesta	exact age, visual specifics beyond Velvet identity	Leave unspecified unless current canon explicitly establishes it.
Emily Nanacea	species/type, exact age	Leave unspecified unless current canon explicitly establishes it.

Appendix G - Master Writer QA Checklist

01. Can every speaking character be identified from behavior/voice without relying on name tags?
02. Does each scene have a relationship change, information change, decision change, or consequence change?
03. Are jokes targeted at familiarity rather than generic cruelty?
04. Does a serious event remain serious in later behavior, even when humor returns?
05. Are nonhuman bodies treated as ordinary parts of life rather than constant spectacle?
06. Have Open Fields stayed open unless this chapter deliberately locks them?
07. **Did any unestablished supernatural or unrelated-project lore sneak in?**
08. Are romantic partners still distinct characters with independent wants?
09. Are siblings/family members allowed to disagree without the story declaring the bond broken?
10. Does protection preserve agency where possible?
11. Is conflict about a concrete value, need, fact, or boundary rather than people becoming stupid for the plot?
12. Does an apology name the action and lead to changed behavior?
13. Does every prank have a plausible opt-out or stop condition?
14. Is genuine distress treated as genuine distress regardless of a character's reputation for jokes?
15. Is Fear written as a whole person rather than a diagnostic lesson?
17. Is Diamond allowed to communicate directly with their own device rather than being routinely spoken for?
18. Is Emily Nanacea one person and a competent opponent?
19. Does Ivan's incident leave legal, physical, emotional, and trust consequences?
20. Does Naki keep normal Expie eyes, glasses, heterochromia, and yellow Expie blood continuity?
22. Does Markov's adoptive status remain equal family belonging?
23. Does Vesta have independent agency outside Deniy?
24. Does Grotti's contradiction remain real rather than resolving into 'secret genius' or 'actually stupid'?
25. Does Deniy's genuine distress stop being part of the prank language?
26. Are Mako's friends differentiated by history, rhythm, interest, and response style?
28. Are physical descriptions consistent with model-sheet anchors?
29. Do characters remember earlier conversations and boundary changes?
30. Are mundane details carrying emotional continuity between big plot beats?
31. Is every major character allowed to be wrong in a way that follows from a strength?
32. Is every antagonist allowed to be competent enough to matter?
33. Does competence have costs and limits?
34. Does romantic progression occur through accumulated behavior rather than sudden label changes alone?
35. Does the Naki/Blade chronology preserve friendship, casual affectionate stage, and later boyfriend stage in order?
36. When a character lies, does the lie exploit their normal speaking habits?
37. When a character is scared, are priorities narrowed instead of personality erased?
38. When a character is angry, is there still a specific objective?
39. When a character is exhausted, does social filtering change?
40. Are private disclosures treated as belonging to the person who disclosed them?
41. Do group scenes avoid giving everyone identical sarcasm?
42. Do quiet characters still make choices?
43. Do loud characters still have interiority?
44. Do lawyers speak to strategy/evidence rather than only moral speeches?
45. Does family closeness create both support and believable friction?
46. Are scene endings allowed to leave emotion unresolved while still changing behavior?
47. Do props/accessories reveal routine rather than random visual clutter?
48. **Does every character get introduced through current continuity rather than assumed background knowledge?**
49. If a detail is uncertain, is it labeled open instead of guessed?
50. Does this chapter still feel like TAHAUFYA: Found in the Noise rather than another project wearing the names?

END OF CHARACTER BIBLE

Future canon changes should update the Locked Canon ledger first, then revise affected expansion sections.
